Have a pair of Motorola model M-1274A solid state amps. Size 6"L x 5"W x
21/2" H with fully enclose shiny aluminum cases. Carrier operated 2 watts
in 60 watts out. Will go higher with more input. Jones plug 12V. input.
Cord and plug included. SO 239 male connecters. Very clean. Satisfaction
guaranteed. $60 ea. Answer to : w7prv@juno.com
Shipping extra.

2. Help on Knwood 261 & 7950

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-01 00:00:00 UTC
From: Murray Green <mgreen@erols.com>
Message-ID: <36B64193.5265@erols.com>
Source record: 117971

Need the part number of the final output amp module for the Kenwood 2 meter transceivers model's 261 and 7950. (I believe, but not certain that the 7950 uses part M57726.) Both are maximum 50 watt output. Lacking schematics. Appreciate input. Thanks. 73 Murray, K3BEQ

3. What are the factory updates for the FT-847

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-01 00:00:00 UTC
From: Pacific Crest <pcrest@teleport.com>
Message-ID: <tyqt2.14656$202.7272612@news1.teleport.com>
Source record: 117972

I have an FT-847 (G series). I have heard that Yaesu will do factory upgrades for free. Does anyone know what these are?

Thanks,

Dan
NX9C

4. Re: yaesu or icom

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-01 00:00:00 UTC

Yeah, BUT!
Icom service & parts availability STINKS and I'm still happy with Yaesu (they are a little late on one manual though.) Add this into your equation.

6. FT-50 Mod Revisited

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-01 00:00:00 UTC
From: lyons1101@aol.com
Message-ID: <19990201185549.09534.00003632@ng-cg1.aol.com>
Source record: 117975

I bought and did the mods to make my FT-50 (with a serial # starting 6L120) a year ago. It went out of band fine. I then traded it away after a couple of months (dumb move!). I erased the software and RDF files thinking I would never need them.

Today I got the original FT-50 back in trade! The person that had it probably pushed and pressed every combination of buttons. It wouldn't go out of band anymore. I tried the original "hold the knob, PTT and lamp" process but didn't get the BAND XXXX message. The radio will except the "Hold the knob and lamp key" mod for CAP\Mars. But the TX from 120 to 220 and 350 to 505 doesn't work anymore. I have the original ADMS disk and loaded it back on the computer. I tried the other mod that calls for pulling out the cable half way through... Still no-workey! Any suggestions?

There used to be a website for the FT-50 and I don't have the address anymore, does anybody still have it?

> Max, K2MSG

Really depends on what you want to do.
For range, I use a BNC adapter and an old Larson duck. Adds about 18" to the height of the
handheld. I stick it in my shirt pocket and use a big rubber band, made from an old tire inner tube,
to hold the antenna against the side of my head. Makes me look "real cool", but it's hard to take it out
to use it, so I have a modified speaker-mic that I clip to my belt. The whole system is only slightly
larger than my DJ-580 and works almost as well. :-)

I didn't buy mine for range, I bought it for small. You can stick a 1/4 wavelength of (very flexible) wire (at 440)
into an SMA plug. Works about as well as the stock duck, on 440, and you can hide it in your shirt pocket
without poking your eye out. You can do this on 2m, but the wire gets way long. Just turn it upside-down
when you transmit and let the wire hang down.
miker

I have a VX-5r and tried to use it while plugged into AC. It's a no-no. The radio will shut off. Then, I read the manual and it says +ACI-AC RX only+ACI- I haven't contacted Yaesu yet to find out why.

Using the DC adapter, RX and TX both work.

You will get a lot of different opinions, but this does not sound too dificult a situation. There are some exotic RF ground tuners and such to help out with problems, but first just try a 6 or 8 gauge solid copper wire run to a 8 deep foot copper clad ground rod. That should get your on the air safely. If you don't get any rf bites, probably from the tuner if it does happen, then all is well. If you do, then write back for more info.

There were two simple, low cost circuits shown in recent ARRL handbooks, one of which would probably work with the 850. I think they used the MAX232 chip. Substituting the MAX233 will eliminate some of the external components

Hi,

Picked up a Telrex TH3jr-S via the net a few weeks ago. Antenna
was almost complete -- seems to be missing the matching wire
for the driven element. Looks like a "Y" (hairpin?) match:

```
={}==={}============[ ]================{}==={}=
\ /
\ /
| |
| |
-
```

Need dimentions to build my own, or part number to try to order
for Telrex.

thanks,
Joe K7JOE

Go to RFparts on the web. They sell new GE's for about $20
each, less than a lot of private parties want. You can also
get 6146W's for lots less from commercial dealers these days.
Good luck.

Hi,
I have an Icom HF setup including radio, auto tuner, cw filter, mobile
bracket, hand microphone, power cord, and operator/service manual.
Rig is the Icom 730 -- all solid state, 80-10M including WARC.
Antenna matcher is the ICOM AH-1, which tunes any random whip or wire
remotely controlled by the Icom radio. Both tuner and radio
are in very nice cosmetic/electrical shape.
Entire package $500 + shipping.

thanks,
Joe K7JOE

26. HELP ICOM IC-25H

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-01 00:00:00 UTC

I have an ICOM IC-25H on the bench that loses its memory when power is interrupted. Is this normal? Is there an internal backup battery? Is this what the 'backup' jack on the back ponel is for?

Thanks,

Phil K2RCG

First, if there are any memories that you want to save download them into the computer. Then do the ALL RESET POWER ON function from the manual. After this you can go into the "Knob, PTT, and lamp" power on sequence...you can do the mars/cap power-on (extended-RX in the Manual) before or after this. Then simply create a template file from the modded radio and make sure that when you send the .rdf back to the 50R you use the new template. Good Luck!

I HIGHLY recomend the FT-2500. It is a commercial grade tranceiver that will not leave you disappointed. The same radio (Innerds) is Identical to their vertex commercial radio. I currently have a FT-2500 installed in my car. The case is 90% metal and the unit is mostly a hink seat. I ran mine for approx 1hour using 50 watts with moderate heating. The unit meats Military specs for shock, temperature and water. The audio on TX is excellent from the reports that I have. The unit also has a very sensitive receiver. The unit is also intermod proof. I guess I can't say enough....

Hi Ed,

My first suggestion is to locate a local amateur radio club. They can give you the scoop on local repeaters, which bands are "used"... a 220Mhz repeater with no activity is not worth the price of a tri-band radio, unless you plan on getting a bunch of activity going.

Buy used... set a budget for yourself and try to stick to it. You can do quite nicely with $300-$400 to start up a VHF/UHF station. I would recommend the Arrow J-Pole dual-band antenna for your base, it's very reasonably priced, has excellent SWR across both 144Mhz and 440MHZ bands and requires no tuning.

Again, get in touch with local hams to get a picture of VHF/UHF operations in the area.. you might even find a bargain or two there... you can also ask about local swap meets etc., and I'm sure they will help you study for your exam. You can also practice taking the exam on-line at:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

Amen! I went for a year thinking the cause of my severe MW and SW interference problems stemmed from some old power lines down our alley. I did some further checking to find out it all stemmed from an old touch lamp. The lamp had to be turned on manually since the touch module had been broke for years, but the module was still emitting radio interference all over the house! I bypassed the module and am now back to enjoying MW DX'ing!

From: TheDude@lebowski.big
Message-ID: <793ngp$sa4$1@news-2.news.gte.net>
Source record: 118076

Hi Guys!

Great NG! I am studying for my first ham license (Tech/Tech+) and am researching like crazy online to get a handle on what I want to start out with. Obviously, minimal cost is a prime factor and it appears that the 2 meter, 6 meter, 440mhz and 1.25 meter bands are where I want to go firstly.

With this in mind -

- I have found a $20 ground plane antenna for 2 meter at MFJ. Looks decent and good price. Any comments on it?

- I LOVE the idea of a HT, but the lower power bothers me. I want something that can go from base to mobile easily, and a HT would easily fit the bill. I am just concerned that the low power will drastically limit my ability to get out, even to local repeaters. I l.ive in the San Fernando Valley (North Hills/North Van Nuys) area of Southern California. Alot of mountains with repeaters on them (from what I have been able to find online), but not sure if they;d be in range of my HT with a base and mobile antenna.

Also going for HT's is the dual/tri banders. I can get a 2/3 band HT for a little more than the IC-2100h, which iws the mobile I am looking at hard: has everything I need to get started (I think) and the p4rice is right. $200 for a new unit and offers 55 watts in it's highest power mode.

- Finally, I've seen some real good deals online - this looks like it will have some bucks - the units are broken in, cheaper, etc. but I am not familair enough with some of the units to understand what short comings they may have, what is good and bad about them, etc.

Anyone bought via the net - is it safe? Are the deals as good as they seem, etc.?

Thanks for the replies - I have a CB but it's alot different than 25 years ago when I had one as a kid. Not bad, but not as polite as I recall.

Like everyone else, I want to reach as many and as far as I can. What must I look into as a tech/tech+ to do this in the above bands?

Satellite comm looks attractive to me. What kind of power and extra gear would you suggest for expermienting with this mode?

Thanks again,

Ed Parry - studying like crazy!

Yep my IC-2100H has blown twice now -- and I always ran it on low
power!!
VSWR has been fine. Since the radio was $199.00 new and it costs $95.00
to repair it -- its questionable if I will fix it again!!

Wouldn't a dualband Jt1000 be nice?
Maybe if Motorola had been as big into Amateur radio as Kenwood, Icom, and Yaesu we might've seen a duo from them.
I guess the closest you'll get is taping a UHF and a VHF HT1000 together...
Now with the Spectra that's a little different. With the remote mounted head on a Spectra you could install two radios packs in the trunk and attach them to the same control head for dualband opreation. Of course, not simultanious reception of both bands.

While ease of operation is important, no doubt, other factors enter the picture as well. Icom's Tx and Rx audio is irritating and fatigueing to these old ears of mine. No bass, just tinny sounding squawks are the norm for Icom. Yaesu traditionally provides a bit fuller audio with lots of punch. Typically, he resale value of your Icom rig will be approximately fifty percent of what you paid for the rig in just one year. Why? Because Icom will have brought out two "improved" models in that year's time.

Everyone has a right to an opinion. This has been mine. No more Icom's for this ham.

Hi Ed!

Cross-band repeater (henceforth reffered to as CBR) is a fantastic feature which many dual-band mobile rigs, and some HTs have the ability to perform. This feature is restricted to rigs with dual-receivers, rather than the dual-watch feature (single receiver which is time-shared using a "watch" feature).

What this feature does, is allow you to use your mobile rig (for instance) as a range extender for your HT. Suppose you've got your HT with your, but you're in a place with maybe 5 watts from a duckie isn't going to get you into your local repeater. Now, there are two ways to set this up:

ONE WAY CBR:

In this situation, you can still receive the repeater from your duckie, but cannot transmit to it. In this case you only need the mobile to transmit TO the repeater, and not FROM it. Let's assume a 2-meter repeater, also. You'd set a UHF simplex frequency on your mobile rig, and set the VHF side to the INPUT frequency of the repeater, along with CTCSS decode, so that other local stations don't key your mobile rig up. (This is how you do it on a rig with general CBR capability; there are some with selectable one- or two-way CBR, and you wouldn't need to use CTCSS decode on the VHF side, in that case.)

Now, on your HT, you must be able to either set up cross-band split (VHF receive freq w/ UHF transmit freq, stored in a single memory), or enable both bands VHF & UHF, and set the UHF as transmit band. Let's assume the first scenario (on my Yaesu FT-50RD) and I use 446.675 as the transmit frequency, and my local repeater's output frequency, 146.82, as the receive frequency.

Now, once CBR is enabled, which can be done via your HT on many of the rigs, When I transmit on my HT, it transmits on 446.675, which my mobile rig hears, and automatically keys up the VHF side (which is set to 146.220, the input to the repeater. So the mobile actually does the transmitting to the repeater, not my HT. This allows me to run 10mW on 446.675, and effectively get into the repeater with up to 50 watts on my mobile antenna. My HT

batter will last forever, and I ALWAYS have a great signal into the repater. When I un-key, the HT switches back to 146.82, and I hear the repeater courtesy tone, and the other people talking on the repeater.

TWO-WAY CBR:

Now, this assumes that you can't receive the repeater on your HT, but you can from your mobile rig with a bigger antenna/more power.

The HT is set to UHF 446.675 (for instance). This will be used for both transmit and receive. The mobile is set to 146.82- (must be duplex) on the VHF side, and 446.675 (for instance) on the UHF side. Once CBR is enable, anything from the repeater on 146.82 will be heard by the VHF side of the mobile, and repeated out on 446.675, which you hear on your HT. When you key the HT on 446.675, the mobile automatically uses the duplex offset on the VHF side to switch to 146.22 and transmit out on that (to the repeater). When you unkey the HT, the repeater repeats back thru the mobile to your HT. This is FULL range extending, at its best!

Hope this helps!

81. Which 2 meter FM to buy?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-01 00:00:00 UTC
From: Wink <wink@rpa.net>
Message-ID: <36B5AFF2.F504CA8C@rpa.net>
Source record: 118087

Hi,
There are currently four 2 meter FM mobiles on the market, all going for $200 or less. There are they the Yaesu FT-2500, the Icom IC-2100H , the Kenwood TM-261A and the Alinco DR-140TQ. They all have just about the same features except that the Alinco and Icom have CTCSS decoders. All appear to be fine radios.

What are your experiences with these radios? Have you heard or experienced anything such as poor receiver, power module blew out in a week or other problems with any of them. I read the reviews in QST and whereas they are much more critical now days than in the past, they usually don't run the user tests long enough to make something break.

I look forward to any input and will repost it for all to see.(if you want your opinion publicized)

Thanks and 73,
Gary / N2UM

83. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <794g0b$dd9@news.Hawaii.Edu>
Source record: 118089
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, WH6U
(rec.radio.amateur working-group)

85. Re: IC2100H Failure?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-01 00:00:00 UTC
From: dlr18sh@aol.com
Message-ID: <19990201103233.00916.00001762@ng-fb1.aol.com>
Source record: 118091

If you remove the top cover there are 3 or potentiometers. they say: MIC ..for mic gain
PWR.... for power, DEV for deviation

go to the PWR (power) and turn so the power
drops from say 55 watts to 40 watts on high power. The heat sink will not get so hot and the power difference is barely noticable.
However, this pot also turns down the other two setting so the mid rang will be 5 watts
and the low will now be 2 1/2 watts.
The lowest power I can get on the high setting is 30 watts and the highest is 65 watts
ONLY turn the Pwer down !!
take care, TIM

88. General Electric Phoenix radio schematic needed.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-01 00:00:00 UTC
From: "Collins, Brian (EXCHANGE:WDC:2X41)" <bcollins@americasm01.nt.com>
Message-ID: <36B5D5EB.4CA4F26D@americasm01.nt.com>
Source record: 118094

I recently acquired a General Electric Phoenix-S commercial type radio. it appears to be a two-channel VHF rig currently crystalled for ~152.?? MHz and ~153.?? MHz according to a slip of paper inside the cover. A socketed crystal on the bottom PCB is somewhere around 102 MHz IIRC. The IF crystal is 10.7 MHz. I would like to use it for packet or TCP/IP work and I will need a schematic, manual and re-crystalling instructions.

Does anyone have any comments regarding the suitability of this radio for this or any ham related purposes? I could obtain another 4 of them for about $10 - $15 CDN each if they are of any use.

The same dealer has several of the old style mobile telephones. Are they suitable for modification for any ham use? I cannot remember the frequency that they operate at.

90. Getting CTCSS/COR out of Kenwood TM-series mobiles?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-01 00:00:00 UTC
From: rodell@my-dejanews.com
Message-ID: <794ri5$9qr$1@nnrp1.dejanews.com>
Source record: 118096

Does anyone know how to get CTCSS and/or COR outputs from the Kenwood TM series radios? There is some kind of protocol that makes it available through the microphone jack, but Kenwood won't help. (Claims the protocol is proprietary.)

I'd like to use a few of these mobiles in an unmodified form for temporary links, so I don't want to go in and hack, especially when I know it is available, somehow. Doug Hall Electronics obviously does it, but their box is overkill for this application.

Any net.pointers are appreciated.

-Bob

Hello!

I have been looking into dual-band HT's and a local shop has two in stock that I have been seriously considering.

Yaesu FT-51
Kenwood TH-G71

I have read reviews on both of these radios, and I would appreciate any information from people that are using these radios. If anyone has both of them, which would you recommend?

If there are better ones (in the sub-$500 range) than these that you would recommend, please let me know! I can wait a few days if it means getting a better radio.

73,

DeShawn Smith

I have no experience with the IC-2710H.

I have had an FT-8100R for just over year. I've cursed at this radio every day that I've owned it. It's so bad, I'd be ashamed to sell it, and have simply taken it out of service and thrown it in the bottom of my junk-box, hoping maybe some day I can salvage some parts.

NEW IN BOX MOTOROLA 800 MEG 1/2 WAVE DUCKIES. these are similar in design to 440 whips, they are not the "side stabbers" that came with stx rigs. these are leftover NOS from the first nextel system. they are "red dot" 800 meg, sma conector on bottom and "ball" tip on end. work fine for 800 public service freqs. aprox 6" long $5 ea. shpng is $3.50 for 1-10 antennas. robert ke4mcl

108. Some questions about radios and computers

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-01 00:00:00 UTC
From: Mark Pelts <anubis@dc.net>
Message-ID: <36B6102F.AB760450@dc.net>
Source record: 118114
Cross-posted to: rec.radio.amateur.equipment,alt.ham-radio.marketplace,alt.ham-radio.packet,rec.radio.amature.equipment

I'm looking at getting my tech license this year (after putting it off for about three years now!) and I was interested in rigs that can be controlled by computer. I'm in the process of putting together a PC that I can use specifically for radio stuff. I know that a lot of radio mfgrs have rigs with that capability and I've seen the GUIs, but I've not had a chance to really look one over first hand. What experience have you guys had with such setups and what are some recommended radios? I'm also interested in any radios and/or antennae that have been developed with the sole purpose of being computer controlled. How about PCI or ISA add on cards?

I also have seen, in the past, a radio that was small enough to use with a laptop and had a PCMCIA attachment... does this ring any bells with anyone?

Also, while I'm here, I have an ICOM W2A handheld trnsvr and I'm looking for batteries and accessories that anyone may have to sell. What do you guys recommend with regards to reconditioning batteries for ICOM radios? Mine won't hold a charge for crap!

I welcome replies to this and my above questions via e-mail. Thanks!!

I have FT-50R ht, an must say few bugs are quite annoying...
So, what about VX-5R ?
Any bugs found already ?
Is it worth changing FT-50R to VX-5R ?
I think it might have some sense according to
given specification, which I've seen recently in CQ.
Tnx in advance

With mountaintop repeaters in your area, I doubt that power will be that much of a limitation. The antenna is the key to long reach: put a good yagi on your house, and you'll hit repeaters *cleanly* 60 miles away on just 5W (I know of one repeater I can hit from 75 miles away using just the rubber duckie).

The choice between mobile and HT is more than choice of power; the power is actually a more minor consideration, compared to other factors. Buy a radio that you'll *use*, and one that won't annoy you. Will you operate a lot from your car? The power and antenna cables you have to connect and disconnect from an HT every time will get to be an annoyance. Real mobile rigs tend to be more resistent to intermod as well, I'm told. They can also easily move between house and car (if you don't mind connecting and disconnecting them: find quick-disconnect mechanisms).

Or are you an active type of person? If you'd like to carry your radio around, then clearly an HT is a better bet. I use mine mobile only about 10% of the time. The rest of the time, I'm out and about. Extra power is useless if you can't take it with you. (I have a Mirage amp for times when I think it might help, but honestly, I've not found it to be very helpful).

Got lots of money? buy both mobile *and* HT! (and send any left-overs to me!).

So - as another poster said, get in touch with other hams in your area. Find out what bands/modes they use. Choose between a mobile and an HT based more on the uses you envision. Then spend your spare time learning about antennas. Finally, look for a chance to upgrade - get into the LONG long-range bands.

73 -

I am new to ham radio and have been looking at the ICOM T7A HP and the W32A radios. How do these radios differ from each other and how do they compare to other brands (quality, power, range, features etc.)? Also, being new to this I'm not sure, but can ham radios and either of these models specifically, use CB and Family Radio Serivce frequencies? And finally, (Sorry for all the questions), where is a good place to buy these models cheap?

Thanks in advance.

I recommend "my" local HRO in Anaheim, CA to just about anyone who needs Amateur equipment and supplies. BUT...

I wouldn't steer a "newbie" there - chock full of questions - on Saturdays. Just doesn't make sense. YES - one-on-one customer service should be available ALL hours, but we have all been in a retail "zoo-like" environment before...

If you know what you need - Saturday's are OK. Sure, I'm "rushed." But I expect to be. When I need one-on-one time - or take a "newbie" there - I'll make sure it's during the week. Things are calmer. Staff isn't handling scores of telephone calls/clients.

I just believe it to be common sense that - if you HAVEN'T done your homework and basically know what you need - to expect a lot of one-on-one time on the busiest day of the week. Maybe I'm spoiled by having an HRO just down the street less than 1/2-hour away...<grin>

It would be a shame, but it sure looks like it. I was really hoping they would come out with a new top end radio building on the TS870, but adding slots for optional filters, larger physical size, and dual receive. I gave up waiting and bought a FT1000MP. The TS50 was a groundbreaking radio but is now way outdated. They discontinued the TS790 vhf/uhf allmode and have not replaced it with anything. Apparently there is a lot more margin and volume in fm equipment and accesories where they still seem to have a lot of competitive products. --- Steve KK9ZZ

144. FS Timewave DSP-9 $100 shipped

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-02 00:00:00 UTC
From: N9IVO <steam@megsinet.net>
Message-ID: <798632$q22$2@news.megsinet.net>
Source record: 117900

Hi.
I have a Timewave DSP-9 that I no longer use and have decided
to sell.

It has six cw filters, three ssb filters, auto notch filter, plus a
random noise (white noise) filter.

cw filter widths: 500, 100, or 200 hz with center freqs of either
600 or 750 hz center frequencies.

ssb filter widths: 3.1k, 2.4k, and 1.8k

All of these are very effective and the Timewave is superior in
digital signal processing than many of the processors included
in the newer rigs.

It comes with the manual and I'll include the rig-to-Timewave
patch cord also. It runs on your 13.8 volt rig power supply.

Price is $100, including shipping, or can pick up in west-suburban
Chicago..
Thanks... Mike

I have a Mint condition VX-1R w/ ADMS software & interface cable, battery, charger & antenna. I will sell for $225.

RLC Electronics COAXIAL Switch, model # s-2826
15VDC operation, N connector outputs and 1 input - $20 obo

1 - SEEKA GR40 12-24VDC input, photo/color sensor unit, very small and unused, Dark/light sens adjust - great for monitoring
object, etc - $40

1 - OMROM, NEW, H5L-A Time switch, 2 relay contacts, time set, large LCD control window, 100-220Vac supply, perfect
condition, never used, mounted in NEMA enclosure, asking $75 obo

1 - RS232 A/B printer/peripheral switch - $10

1 - Magitroni P/N I-E16-COMBO Ethernet card, BNC/RG connectors, used - $10

1 - Artsoft Ethernet Adapter, BNC/DB15 connectors - used - $10.00

1 - Moose Products Inc, High Powered 12Vdc, yelp/stdy Siren Module Board, 4 ohm min output for horn, works fine, real
loud, -
$10.00

1 - 12VDC operated UHF remote control switch receiver/Mini transmitter set, works fine, relay output (w/ relay),
transmitter
uses 12V battery, included, used but functions perfectly - $20 (pair)

Intermec (altered) Barcode Laser Scannerdevice(diode Laser) does not read, but scans fine(5V input) scans nice 670nm line
when hooked up to 5-6VDC, neat toy. - $20.00
Model # 1545

1 - B Eagle Electronics Automobile shock sensor unit, 12VDC operation with sens pot - $10

1 - DE 1506 sound automobile sensor, 12V with MIC & sens adjust $10 obo

1 - LXI series(sears) Portable 12V VCR, works fine, with all cable connections from base unit. LCD readout, no charger,takes
lead acid batteries(like from old MOTO phones - $50 obo

Uniden/Bearcat Desk model # INF5XL scanner, preprogrammed by state type, with whip antenna, no power supply, tested fine
with

mine. Buttons for POLICE, FIRE, MEDICAL, STATE, WEATHER, DELETE & HOLD, PLUS SQUELCH/VOL. Best offer takes this off my
hands..

PRO-34 (cat # 20-139/9135) SERVICE MANUAL ONLY - $10.00

VIDEO STUFF

Casio HH calculator(scientific) # RM-7400G (icon Menu) with comp link & OHP(over head projector) unit, Calc talks to OHD via
IRDA(Infrered) signals, great for presentations/classroom. OHP also made by CASIO has some type of PCMCIA port on side
aswell, no docs, but both work fine. $100 pair

1 - Color CMOS Egg shaped CCD camera, adjustable focus, 12VDC input/NTSC video output via RCA jack - $75.00

1 - Commodore Model 1702 COLOR video monitor - $40.00

E-mail me at:

CB uses AM and sometimes SSB modulation at a frequency of around 27 MHz.
Neither of the HT's you mention will receive nor transmit on CB frequencies,
nor are they practically modifiable to do that - there is just too much
difference in the frequencies and techniques used.

The FRS uses UHF frequencies that are somewhat above the UHF 70 cm (440
MHz) band, transmitting FM with 3 kHz deviation (I think). Amateur
handhelds designed for 440 use FM at 5 kHz deviation. Most recent amateur
handhelds will receive outside of ham bands, and so will receive FRS
transmissions - but the audio will be quieter than normal, since FRS
uses less deviation than amateur practice.

Some amateur handhelds can also be made to transmit at FRS frequencies,
but unless you adjust their deviation, they may produce a signal that's
too wide for FRS receivers, distorting the sound (and potentially
being heard in adjacent channels as well!).

So much for the technical aspects. There are also legal issues.
Anyone can listen to CB and FRS transmissions, so there's no problem
there. But you can only legally transmit on these frequencies with
a transmitter that is certified for those specific services. An
amateur transceiver, modified or not, is never an approved radio, so
using it to transmit is always illegal.

Dave

Use atleast 3 inch hardline.

For around 50 feet, just about anything bigger than rg-58 is ok. On FM , there is not enough difference in the loss to be noticible on anything from rg-8x up. Lots will say the 9913 or equivilent. That is good, but if not installed corectly, you get water in it and the losses go way up. You also have to watch the tightness of the bends. Only on runs of 100 feet or more will the actual differance in the coax be noticiable in the FM mode.

From: Joe NW0A <*manntis*@loop.com>
Message-ID: <iuPt2.171$0V.132786@news2.randori.com>
Source record: 117910

Brought my VX-5R down to Yaesu last Thursday (99/1/28) and
received a call from the service department yesterday (99/2/1)
saying it was repaired and would I like to have the radio mailed
back instead of traveling down to pick it up. In my dealings
with Yeasu warranty repairs, this is about 2-3 days faster than
what I have experienced in the past. I feel that no other amateur equipment
company even comes close to the service that Yaesu
gives to their customers (Kenwood and Icom both being fair to poor).

While I was at Yaesu, I had an oportunity to talk to one of their
technicians, and I felt he honestly and openedly answered all
of the questions I had about the radio. I was told that the radio
would have all the mods done to it that would bring it up-to-date.

Along with the PL-scan modification, I heard mentioned that
there was mod that fixed a problem on the 6 metre band. I need
to wait and see what was done to the radio to comment better
about that this mod entailed or even if it was done.

Hi All
Try lmr400 from Texas Towers or the wireman (& whoever else
carries it). Very low loss, full foil shield with 90% braid
& foam dielectric. 9913 is known as "water hose" up here in
the cold country. Used one 60 foot run that went into a
weatherproof preamp/relay box & it still filled with water
from the temperature cycles from wintre to summer.
Mark

Bill, sorry to say, it is true. In an article in the Sacramento Bee, Volume 284 dated Monday 1 February 1999 Steve Wiegand, Bee Staff writer relates that sometime on this date, " somewhere in the world, a sentinel on some far-flung coast will tap out a series of dots and dashes on a wireless telegraph key - and an institution will "SOS". In this case, that stands for "Sink Out of Sight." The article further on down quotes Chief Warrant Officer Cliff Simonsen, USCG, CAMSPAC, Point Reyes "for those of us who have been at it a long time - I've been doing it 30 years - it's a little sad to see the end of it."
I believe the Sacramento Bee is on line and you may be able to get a copy of the article. If not, drop me an E-mail and I'll see what I can do for you.
73's and regrets.....Bob, W6JRF

Hello,

If you haven't sold the equipment yet,
I would be interested in just the
monitor.
If the tuner is in good shape, you should
be able to get $350 by itself.

Would you be interested in selling just
the monitor?
If so, please describe unit, condition,
and offer price.
Thanks,
Bennett ko2ok,
in nj.

HamMan wrote:
>
> No-Code whiners are liberals. They don't like something so they trash other people to make themselves feel better. That is why they like the ARRL proposal too. They can get something they don't have to work for.

HamMan's post is liberally sprinkled with the word liberal.

First, the amaterur radio service is a grant, privilege, license program, whatever you want to call it, established by ALL U.S. citizens through the FCC. If a large number of Americans want to establish a licensing program without Morse Code requirements so be it.

As for Clinton, I don't give two hoots about the man BUT if the President of the US can't get laid, then I don't know who can.;-)

As a no code whiner I am not out to trash other people, only to make the radio amateur program accessible to more U.S. citizens.

Dropping Morse Code doesn't mean you don't have to pass any test. A one hundred question test with more radio theory would be a more appropriate test. Knowing or not knowing code doesn't enhance my knowledge of operating a station safely and competently.

When the FAA made the instrument rating easier to obtain pilots howled how the system would be degraded. Nothing of the sort happened. The requirements for obtaining a ham license can remain stringent without requiring code--IT IS KNOWLEDGE, COMPETENCY, SAFETY AND SKILL THAT SHOULD NOT BE COMPROMISED.

Why not incorporate a "practical" test and have the applicant identify resistors, transistors, a SWR meter, or whatever.

Ding ding ding... We have a winner! Yep, the IC-25H had an optional memory backup which plugs in to the 'backup' jack. Lacking that option, you can just use a 9v power supply (wall wart) and plug it directly into the backup jack. For mobile use, I suppose you can use a 12v line that's hot all the time, or just leave the power on.

I have heard two sides to the New Hampshire
store. A couple of guys on two meters complain that they didn't get any
attention from a Salesperson and
another guy complained the Salespeople were all over him. It is almost like the
Store can't win. I guess the best thing to do is introduce themselves and if
the person says he is just looking then the salesman can say that he will be
available to answer any questions if the customer has any and leave the
customer be. I don't beleive the Salespeople make 1/2 of 1 % but maybe I am
wrong. Hams are tough customers.

>Dean W5GXL

The supplied software bites, and Icom keeps the API proprietary
to prevent you from writing your own. There is no protective protocol
to prevent writing erroneous data to the radio. You can screw
up the radio by sending it erroneous commands. Even the probing
for modems Win95 does on startup can corrupt the radio's NVRAM.
That requires a trip back to Icom to straighten it out, and *you* pay
for it. This is a *serious* design flaw that Icom won't admit or address.

However, there is software floating around on the internet that
lets you suck down the radio parameters and save them to disk.
Then when (not if) the radio becomes corrupted, you can just
download the saved parameters and restore the radio's function.
Icom should supply this to owners at no charge, but they won't.

Some people have reverse engineered parts of the API and offer
third party control software for the radio. I haven't found any that
I like, but they've sort of documented the API this way, and so you
can now write your own software for the radio (but grab that parameter
backup software first, you'll probably still need it).

Now software issues aside, the radio is a pretty decent receiver,
considering its intended purpose, IE mainly a super scanner. It
isn't that great on HF, but does Ok on VHF/UHF where good
selectivity and the ability to tolerate strong adjacent signals isn't
as important.

Would I buy another one? No way as long as Icom won't address
the NVRAM corruption issue and release the programming API.
You might want to consider the WinRadio instead. It has an open
API, and doesn't suffer from the NVRAM corruption problem.

Source record: 118019

I have a like new IC-24AT that shows some signs of needing UHF PLL adjustment (unlock indication between 451 - 459) and need information as to how to adjust it. I am willing to buy a service manual or will settle for just the alignment information if someone can provide it. I have another of these that I have owned since it was new and it receives fine in the same range as did several others I have used in the past, so expect it is the PLL.

>Folks, it pains me to see idle speculation on this topic!

I really don't believe that me post was "idle speculation".

>Don't guess here. Abide by the manufacturer's specs and dig your
>footings, pour your concrete, layout your guywires, etc., accordingly!

I suggested hiring an engineer. Also, what would the manufacturer know
about the soils at any specific site?
I think the post noited that the tower was free standing, which would imple
that all of the overturning moment would be carried in the foundation as
lateral bearing, right?

>Some tower manufacturers design for 50 MPH wind survivability...this
>is not really a big wind! Do you really want to risk your investment
>in marginal specs?

Aside from the static overturning moments, there may be a componenet due to
the SHM in the tower, right?

>I'm not touting one manufacturer over another, but put up your
>tower/lines/rotors/antennas to stay up! Use the manufacturer's specs
>as a minimum, and if you want to get creative, exceed the specs!

Without the guidance of a professional engineer, how would you know that in
deviating from the specifications, you would be exceeding the
specifications? Just curious.

>Same thing goes for grounding.
>
>I have lost a tower before, and believe me, if yours goes down you are
>talking thousands of dollars and dozens of hours of time to replace. A
>few extra feet of digging, or a few extra yards of concrete, some
>extra grounding, or a few hundred extra bucks for new guywires and
>hardware is CHEAP compared to the consequences!

If you are goint to do "a few extra feet of digging" or pour "a few extra
yards of concrete" wouldn't you want to know that the extra expense actually
gained you an increase in the safety factor? Instead of being literally
poured into a hole in the ground?

>OVERDESIGN your tower and it will outlive you!

I think we were talking about the foundation, not the tower, right? Why in
the world would you spend money on a foundation when in the real world your
tower would have long ago collapsed before and of the money even started

working for you?

>My $0.02 worth! Good luck and 73

You said you have had a tower collapse, right? For a freestanding tower would an increase in foundation strength have kept it up? It would have been wasted money then right?

Before you spend $500 more on foundations, go spend $250 on a competent engineer, it is money well spent. Right?

Source record: 117621

Let's not labor it folks. The subject was the foundation design, not the tower design. Most local jurisdictions will require a FOUNDATION design by an engineer registered to practice in the state where the FOUNDATION will be constructed.

I have done many stack and tower FOUNDATION designs. Most at the request of the equipment fabricator, several for local amateur operators. I do not sell my signature and seal. And I do not know any other engineers that do either. This is a common insult thrown at PEs by people who resent something, Lord only knows what.

These are simple devices, and the design of a simple free standing tower FOUNDATION takes less than 3 hours, hence 200 to 300 dollars. I will even visit the site if I am unfamiliar with the soils in the particular area. In some cases I will have a soils report done. Yea, we have our own certified soils laboratory, and that costs the client more. But based upon the UBC and it's inherent safety factors this is not usually needed. That's a judgment I get to make based upon my experience, education, reputation and license. Lord knows I paid for it.

I have over twenty years experience in the design of freestanding stack and tower FOUNDATIONS, literally hundreds of them. I have designed the actual custom stack or towers probably fifty times. I am familiar with just about every code and standard around, including AISC, AREA, UBC, SBC, etc, and many foreign standards.

Obviously a pre-manufactured tower product is more cost effective as I would not be "reinventing the wheel" and the product will cost less based upon the economics of scale. But a FOUNDATION, that's another story

To have an engineer "just sign off" on someone else's design could easily, as we say.`"cost him his ticket", and you know what, I gotta tell you I resent this particular inference.

Once again, I referred to the design of the FOUNDATION, which was the question asked, not the structural steel.

Also, of the engineer does not do a "full analysis" of the FOUNDATION, he ought to think about going to work for the government, and quit calling himself an engineer.

Maybe I'll not do tower FOUNDATIONS for amateur operators anymore, knowing now what their attitude regarding engineers is. Or maybe I'll just start charging $1500, as the Building Department here requires them to come to me, and then you guys will think you are actulayy getting something for your money. Besides, my partner is always telling me to charge more.

Cheers,

TCR, PE

I need to modify my radio to be able to send and receive at 153.xxx MHz.

Does anyone know the trick. I'm also interested in any other tricks you might know.

Found mods on http://www.kenwood.net that would expand my receive but I also need to transmit.

248. Info needed about Yaesu FT-767GX

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-03 00:00:00 UTC
From: jsmollon@icx.net
Message-ID: <36b7ee99.12937768@news.icx.net>
Source record: 117792

I am about to buy a used 767GX, and found out it has a
"built in" power supply. This is fine, but will this rig also
run off 12 DC ?

Thanks in advanced for any information.

"Ron Harshbarger" <rnharsh@visi.com>
from thoughtfully posted:

> I really need an HP 87!!! I'll buy one in almost any condition short of a
> burned up piece of charcoal.......

Go here:

http://www.ebbsoft.com/

Or "Shotgun" it and do a net search for "HP-87".

Also take a look at:

http://www.hpmuseum.org/hp85.htm

Tucker usually has some, too. Most of the used equipment places
will have a few.

If you don't need the wide screen - consider the HP-86. Less
memory (64K) and an external monitor.

Good Luck!

Cheers,
Paul Grohe

>Dave Martindale wrote in message <7986rm$9mp@redgreen.cs.ubc.ca>...
>>So much for the technical aspects. There are also legal issues.
>>Anyone can listen to CB and FRS transmissions, so there's no problem
>>there. But you can only legally transmit on these frequencies with
>>a transmitter that is certified for those specific services. An
>>amateur transceiver, modified or not, is never an approved radio, so
>>using it to transmit is always illegal.

"Rick Pemble" <pemble@ix.netcom.com> writes:
>** you mean ** "using it to transmitt [on frequencies outside the amateur
>band] is always illegal"

Please notice the phrase "on these frequencies" in the paragraph
above. This refers to CB and FRS frequencies. Then, notice that
"using it to transmit" appears in the same paragraph as "on these
frequencies".

A reasonable person might conclude that the final sentence applies in
the same context as the rest of the paragraph, and is thus talking about
the legality of transmittion on *CB and FRS* frequencies. OK?
That's all I was talking about.

Besides, you're wrong. It's not illegal (in the USA) to transmit on
MARS and CAP frequencies using amateur equipment, even though those
frequencies are outside the ham bands, as long is such use is approved
by the agencies that do control the MARS and CAP frequencies. So it's
not always illegal outside the ham bands. (But it is always illegal
on CB and FRS frequencies, except in emergencies).

Have the following to trade: Brand new Drake SW2 with remote and tilt stand. Would sell for $395. One month old Icom 2100H 2M transceiver. Astron RS35M power supply in good condition. Would consider trading all this for an excellent R8A or just the SW2 for an excellent R8 or will entertain offers. I just bought the new SW2 last Monday.

Does anyone know the availability of any "dummy" AA cells?
(I've seen them in the past - they are plastic forms the same size of
an AA cell, with a metal strip connecting the top and bottom contacts -
basically a specialized jumper!).

I have a AA battery pack for a handheld radio (Kenwood TK-250) that has
spaces for too many AA cells (excess voltage would damage radio). I need
to insert two "dummy" AA cells to act as jumpers for these extra spaces.
Already tried to solder jumpers in place - can't do it due to the metal
they used for the contacts.

Thanks for any assistance and advice!

Steve KC6IJM

275. TS-140S MARS/CAP Mod

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-03 00:00:00 UTC
From: ypwhich@hotmail.com
Message-ID: <79a14i$n2j$1@nnrp1.dejanews.com>
Source record: 117819

I found the mod for the TS-140S, snipping diodes 29 and 31. Fine, so I think diode 31 gives you more power on all the bands because i did that first. Then i snipped 29 and reset and checked it out. It added 45Mhz-60Mhz to my receive, except for one little problem. When listing between 45-60Mhz, the display goes blank (except for dots), and it does Morse code that says "unlock". I checked the service manual and the normal manual and this is a "feature". It turns out that the processors catches the fact that it is recieving out of the allowable area and immediatly shuts down the reciever volume. Well i don't call that much of a mod.

So how can i actually LISTEN to stuff from 45-60Mhz?
Also, It now transmits from 49 to 55Mhz, but that is not so usefull as i'm interested in getting it to work on 47.xx Mhz (Red Cross Freq).

If anyone can shed light on how to trick the processor into thinking it's not out of band, so that i can actually listen, or if i've done the wrong mod.... Or if there is another mod... i would be very greatful for this information. I've searched the WWW endlessly, and other than a short note of some guy telling another to snip D29 and D31, i've come up with nothing substantial... if anyone has a real "white paper" on this i would be happy to pay for fax/shipping whatever. Thanks

How about using wooden dowels with thumb tacks in the end with wire
connecting the thumb tacks

No the rig won't run off 12vdc. Also the PS is weak in it. Mine is currently having the PS serviced, and the guy doing the work said that PS failures in them were common. Also the electrolic caps dry out when the rig is warmed up, and they sometimes need replacing.

Otherwise I love it, it's a great rig.

Enjoy,

Grego

Steve,

Have you checked at a Radio Shack? (Presuming you are located near one)

I have an old RS portable citizen's band radio that uses two dummy cells
when using 1.5V AA batteries instead of 1.2V AA rechargables. They are
a lead-like cast dummy with a thin body and normal sized top and bottom.
Perhaps they can get them for you as a replacement part ... radio is a
TRC-209, #21-1660 if that helps at all.

Try Radio Shack. Some of theeir CB walkie-talkies come with
two dummy batteries (so the user can load either ten NiCd's
or eight alkalines + two dummies). They surely don't sell
the dummy batteries over the counter, but I'd bet they can
order them as a service part for the CB W-T's. Try it!

Steve OM,

Why not just make two out of wood, with a jumper? Cost is zero.
I made a "false" battery pack for my portacle VCR and camera (no,
not a 'cam-corder'), by cutting a block of wood the same size and shape
as the sealed battery, complete with two copper contacts and leads.
This enabled me to use the setup off my cigarette lighter jack in the car.
Another zero cost solution (my favorite kind!).

> 4. How well does the VX-5R work on am broadcast?
> 5. General preference
>
> Bill
> W8BC
>

1. I have recently bought a "fixed" VX-5R and I love it. The big difference I believe is that the VX-5R transmits at 5 watts and the Q7 @ 300-350 milliwatts. The receiver in the VX-5R is really good and audio is surprising considering how small the radio is. Using it on 2 meters I was blown away by the performance and the features of this little radio I like the 200 Memories and tone scanning feature.Battery life seems to be really long with the lith-ion battery.

2. Q7 does receive WFM broadcast according to the Ham Radio Outlet catalog.

3.The A.M broadcast works ok on the VX-5R I suspect it's the little antenna. The shortwave broadcast if really nice, again better with an external antenna (i use a 2 meter vertical and it works great).

5. I looked at both rigs and I liked the VX-5r better because I wanted to use it mobile. Of course the cost is the big difference the VX-5R is $359 from HRO and the Q7 is about $200. I talked to a guy in the store who had a Q7 and he liked it but admitted the low output caused it to be mostly used as a reciever which he thought was very nice.

One last note there was a problem with the early VX-5R's that I found out in the newsgroups, I believe when stations with pl tones are stored the memory scan would not stop on the busy freq. The one I bought was one of the fixed versions and this problem has been eliminated..make sure you get a fixed one..or you will have to send it to Yaesu to get it straightened out.

Source record: 117835

Tim, I used to work for Kenwood, in California, and now service their equipment on my own. They took a big loss in consumer electronics about three years ago, and reduced their staff and new equipment budgets as a result. I suspect that they never have made money off the ham market, but the "old timers" in the company wanted to support the amateur community. The TS570 radios are really nice pieces of equipment. Even if they got out of the business, they would still support the products already out there. I hope that they remain in the market. With the HF bands getting better, there is a good market for this equipment. Stuart K6YAZ

Dear BD,

First, you should make sure that the window glass is not tinted with a
metallic dye -- this will alter the glass dielectric as well as
introducing losses. Since glass-mounted antennas are capacitively
coupled end-fed electrical half-waves, the mount point is high impedance
and must be kept at least one inch from the glass borders as well.

Source record: 117837

Make sure your needs are that you can always supply this radio with at least 13.5 to 13.8 volts DC either off a
power supply or a battery that is under charge. If you try and run the rig off a well charged deep cycle battery
that is charged to say 12.7 volts the radio will starve for voltage. It needs 1.5volts of over head on the DC input
to operate properly at 12 volts. So as you can see for emergencies off a battery unless it under charge, it will
not perform well. The common symptom is it sounds as though RF is getting back into the radio. Your voice is
distorted to those on the other end, and they tell you have RF on the mic and comments like that. The radio is
starved for voltage. I have the power cord on mine modified to 8 gauge wire and a heavy duty fuse holder so there
is very little voltage drop across the power cable. TT will tell you no more than .2 volts drop. I also changed the
mic out to a dynamic model so the mic control was not so sensitive. The radio will work well if you have 13.8 volts
on it, mush less and it has problems. They don't tell you that in the adds. And even the manual says it will run on
12 to 13.8 volt but it won't. I ran in to this problem because my power supply quit and I put the radio on a good
battery, and I had all kinds of problems. I since learned from others when asking around, and on the TT E-mail
server, that 13.8 is the only thing the radio likes. Get a TS-50 for $200 more. I use to say I love my Scout until
I found out in only liked 13.8 and nothing less. I not the only one. Just thought I help you with your decision if
you were planing on using it for emergencies. I am not putting a downer on the radio. It works well. But if you
find yourself needing to run it off 12.5 to 12.8 volts DC, it won't do that very well at all.

Source record: 117838

Hello !

Thanks for reading this message. Three years ago, i bought the MFJ 259
analyser in the U.S.A. I used it only a couple of times. I took care for it
as "eggs".....
Some time ago i once again i would make some measurements.....it failed !
I made an e-mail to MFJ, but no reply....

The counter is ok.

It looks like the oscillator doesn't run anymore......

A friend of mine said that it was the rotary switch wich made bad contact
after a year in the box....

Anybody can tell me if there is a known cause for this, or where i have to
look...A schematic would be helpfull, but i never managed to get one....

Best regards !

paul.vandenhende@ping.be

295. Concrete required

How much (square feet) of concrete do I need to pour to hold up a 60ft free-standing tower? How deep in the ground do I need to go? This is in a light-wind area and the antenna load will be about 2 square feet. Soil is clay. I'm thinking I can do my patio and tower all at the same time!

Also, I've seen a couple of towers that were bolted to the concrete in the ground via these large bolts - facilitating easy removal I would assume. Is this the way to go?

Thoughts?

I have just found this. The package looks good and is well
documented. I dont know how well it works cos I am having a problem
with my sound card since I upgraded my PC.
A new DataRX/TX Program that uses the SoundCArd is availabli.
Can be found here at http://www.ncsl.co.uk/ncsl.html
if you wish to use WEFAX, FAX,
RTTY, CW. SSTV

Regards.
Bryan Bisgrove.

Hello to the group,
I have (2) new 128 megabyte 100 MHz ram in SDIMMS format optimized for the new Pentium 2 platform. my wholesale cost is $189.00 each. I want to sell them for $300.00 for both and I pay shipping costs. I will also consider any VHF 2 or 6 meter trades, Amps, radios, meters, etc.

Please email me if interested,

Look in the ROHN book....no tower is athorized over 30 feet free
standing.... if yo insist on it use 2 cu yards colume about 5 feet
deep. find 3 solid steel rods about 3 feet long adn insert them up the
tower legs about a foot, bolt them in. then use only the bottom
section of the tower for a vertical guide while you pour the concrete.
carefully make the section vertical till the concrete sets. that way you
can remove the tower later if you choose. 60 feet is a long way, at
least tie it to the house at the 8 foot level wiht a bracket... the
tower may have only 2 sf of area but the 4 element beam has 5 or 6 sf..

good luck

I used 2 x 2 x 6 feet deep to anchor a 56 footer with tons of stuff hanging off it. It was far
more than was required, but it never moved. 2 x 2 x 4 is more than enough, but will you be able to sleep nights?

You might also want to consider countersinking the tower base -- that way, if you ever want to make a change, after you cut off the anchors, you can fill in the hole.

I've made them before. Take a piece of copper or brass tubing that's the
right size to
make connection at the positive end. Cut it the right length.
Take a piece of wood dowel the right diameter for the battery case and drill a
hole
down the center for the brass tubing. It's tough to get the hole centered, so
make it
oversize and use hotmelt glue to hold the brass in the center.
Can get all the parts at a hobby store. or hardware store or...

You can accomplish the same thing by cutting a slot down the side of the dowel

and running a wire between two thumbtacks.
miker

First sale never came through with the money. So I still have a FT-51R with one 4.6V Batt. and Two 9.6V Batts. Speaker Mike with remote controls and display on mike. NC-50 quick desktop charger. ADMS software to program the Ht and cable.

I would like $350 but will listen to any serious offer. Would like COD and must be in US. I will pay the Shipping.

Dangerous question. I would recommend a pile footing, size based upon wind loading, soils lateral bearing capacity (you mentioned clay), local codes and what SHM (tower sway) would be expected in a wind.

By the way, a pile footing is circular in cross section and extends to some depth into undisturbed soils. Usually a large diameter hole augured into the ground. Set rebar cage and anchor bolts and pour concrete.

My advise? Hire a Civil or Structural Engineer. It won't cost that much (a few hundred bucks) it will make the building department happy, and you'll sleep well.

Alpine Navigation Systems!!!

I have four gps receivers beginning with the Garmin 45.
Also own the Garmin 120, Garmin III and the StreetPilot with
six metro cartridges. Loved each one on the day I received them.
Did not take long to get dulled with their clumsiness.

The StreetPilot is the best of the Garmin line but a complete
and total waste of money if you need more than one of
Metro Cartridge. When you have to spend 500 dollars to
buy the overpriced piece of junk and then pay an average
of $125 per cartridge you will have paid for a better system
but still be stuck with Garmin.

Take a close look at the Alpine Navigation System.
I have had mine installed in my car for six months and
have never regretted the expense of this unit.

You do not have to look at the screen; the unit talks to you.

If you can not afford the Alpine unit, the next best thing
is to run your laptop with a program from TRAVROUTE called "Co-Pilot".
This software blows away Street Atlas 6 as well.

The only Garmin advantage is it's portability.

Garmin is GREEDY and their product will be short lived in
a value conscious market.

These opinions are my own personal observations. They are
extremely accurate and objective. I own every piece of
hardware and software mentioned.

for free standing i would go with 4'X4'X3', 48 cu ft. or 1 3/4 yard
(pritty close) if you pour your patio at the same time 1 cu yd 4" deep
will do about 80 sq ft. ..... personally i would set the first section
in the concrete. but the bolts will work too.. use at least a rohn 25G
tower. a rohn 20G would be better yet. ......dave....

I have a HYGAIN HS52 and their specs call for a base 42"X42"X51/2feet with 4" above ground. I have this tower fully extended with a 4 element tribander on top of a 10 foot mast. It has been up in 85 knot winds with no evidence of swaying. It was put up according to HYGAIN's specs. If you want, I can scan the base and email it to you.

My FT5100 lost all the bulbs and I replaced them with the small "wheat"
lamps from Radio Shack. Took quite awhile as I had to completely
disassemble the control head to get to the little bulbs.
The FT2400 has the same display as a FT7400 so it definately has bulbs.
Propably just as difficult as the FT5100 was.

Good luck

Dan

As you drive around, anywhere in the world, you see self-supporting Cell and PCS poles 30 to 120 feet tall with no guys and a large cross section wind load at the top. I invite you to take a ruler and measure the diameter of the concrete pier underneath, and then count the number and measure the size of the bolts through the base flange. Now do you have the idea?
Crazy George
P. S. Almost anywhere these days you can see one of these being started. Look at the hole size before it is filled with cement. Careful! Don't fall in!

Hi All
I would post this question on the towertalk reflector, go
to http://www.contesting.com, you will be able to find the
instructions for the reflector. As a minimum a rohn hbx56
requires a base that is large (5 1/2 x 5 1/2 x 4 deep if
memory serves me with lots of rebar).
Mark

I am trying to find out what kind of rain gauge transducer mechanism is used to measure the collected water for the Heath/Zeneth Digital Rain Gauge #EIA-416. This is manufactured by the Heathkit Company, maybe not as a kit.
Any information about this unit would be greatly appreciated. Will pay any costs for copying and shipping. Thanks Don

US freight costs are the killer to our business. We import electronic stuff from the US. One package cost USD180 to airfreight here from the US. It was faulty on receipt and had to be sent back which cost USD30 equivalent. We deal with several countries but the US is the disadvantaged source simply because of its transportation costs.

Hi, I've got a TR-4C, MS-4C, AC-4C for sale. The radio is serial number 34886. The radio might be a 9 out of 10. I never cared for that numbering system much so I have pictures available on the radio and speaker/supply. There is a scratch on the right side of the MS-4.It works great and I use it all the time you can hear it on the air any time in the evenings or Saturday morning, (depending on your location). E-mail at swb1@flash.net for pictures. I'm asking $400.00.
Thanks

Greetings!

Yikes!

Due to the Graphic Nature of the following, please excercize
discretion, Parental Guidance is suggested...

On Wed, 03 Feb 1999 16:45:30 -0500, While the Monitor displayed an
idea about "Concrete required" from 'Andy Moss <enzo@ibm.net>'. The
Keyboard responded with this:

:+> How much (square feet) of concrete do I need to pour to hold up a 60ft
:+> free-standing tower? How deep in the ground do I need to go? This is
:+> in a light-wind area and the antenna load will be about 2 square feet.
:+> Soil is clay. I'm thinking I can do my patio and tower all at the same
:+> time!

Are you thinking of using a slab to hold up the tower and that same
slab to hold up the patio deck?

Well, ok. But do you have a tower that can Free-Stand at 60 feet
without guying? I would worry more about the swaying and possible
frame collapse instead of concrete at the base for anchoring.

Concrete? Well, I would think of a percentage base, length into ground
versus length above ground. Since I don't know the width of the tower
base. I'd use at least 10% [or 6 feet] of anchor for this height. Less
if the tower base is made wider, or greater than 3 feet wide. Use
either Stainless Steel hardware, or at least use Galvanized. Threaded
rods in lengths of 6' into the ground, with possibly a little less in
concrete [5 feet deep] if you can use longer rods [3/4 - 1" dia] and
pound them into the ground.

It may be overkill, but when clay gets shifted, or wet for long
periods of time, not only does it settle, it can cause your Hi-Po
miracle antenna, to imitate another long-standing relic of a foriegn
countries claim to fame...;-) You may not only have Vertical and
Horizontal polarization with whatever you put up there, but a good
combination of both at another angle too...

For best results, taper the base wider than the top, to form a wedge
in the ground. This way, if shifting were to occur, the extra area of
the wedge will help keep the antenna upright.

:+>
:+> Also, I've seen a couple of towers that were bolted to the concrete in

:+> the ground via these large bolts - facilitating easy removal I would
:+> assume. Is this the way to go?
:+>
:+> Thoughts?

If you're thinking of a Tower, at this height, I'd recommend a
crank-up. Unless you've got other plans for the pocketbook. ;-) Then
you should look into a bottom section that allows the tower base to
tilt or lower down [pivot at the base]. You'll need a jig of some kind
to help bear the weight and help lower the antenna when you need to.
The bottom sections can be left in the ground, if you need to remove
the tower for any reason. It also allows you a means to erect the
tower, separately, after pouring and leveling the base for the tower.

Hope these suggestions help you figure out the mess...

Regards!
:+> Andy <+:

>There something else that can be done besides chopping the antenna up? Is
>there a formula for deciding how much to chop off (it has a plastic cap on
>the end that can be removed), vs just guessing, if that is the only
>alternative?...

If you have a newer car with tinted windows, your high swr is most
likely due to the metallic content of the tinting materials used in
making the window glass. I suggest you find someone who has an
antenna analyzer such as the ones MFJ makes and check the impedance
you are seeing. Also, be sure you do not shorten the coax which comes
with the antenna as it is an integral part of the antenna design.

340. Help! Need Information On Moseley Beam

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-04 00:00:00 UTC
From: "Phillip G. Johnson" <phillij1@bellsouth.net>
Message-ID: <36B8C00A.80ABC6E6@bellsouth.net>
Source record: 117636

I just received a Moseley Beam from a friend. I have no idea which model it is. It is a 3 element beam with a 14 foot boom. I know it is a 10-15-20 meter, but I think the traps have been modified or repaired. I an looking to set it up for the phone bands in the 10-15-20 bands.

Can anyone help identify the antenna to what model? What should I look for in the identification? The shortest elements has a 14 turn trap and a 23 turn trap. I haven't checked the other traps to see how many turns are in the trap.

Can someone help also tell me how many turns should be in each of the traps for each band/

Any help would be greatly appreciated.
Please reply to the e-mail address phillij1@bellsouth.net

Thanks

From: "William R. Moore" <wr.moore@worldnet.att.net>
Message-ID: <79b4k2$r2s@bgtnsc02.worldnet.att.net>
Source record: 117637

I'd like to sell an Alinco DJ-580T dual band (2m/440) handheld FM
transceiver, including an MFJ speaker/mike, two 1500mah batteries @
7.2v (provides 2 watts out of the tranceiver), battery charger, MFJ-1716
longer
antenna (7.5"), and an after-market carrying case. On a scale of 1-10, its
a 9 cosmetically (some key lettering is beginning to wear off but is still
very
readable) and a 10 functionally. Also receives aircraft band AM. Original
manual included plus a better English version I found on the web somewhere
that really helps.

This radio receives both bands simultaneously (unlike many others) and does
crossband repeat.

Asking $175 including shipping.

73,
Randy, KS4L

: >set it, the value won't change.
: >
: >Anyone here have any thoughts?

: Go to selection #30, WSQL, and make the adjustment there.

NOPE....although you are on the right track....
WSQL needs to be set to 0

The correct selection is #32, RMOD.
Probably you will find it set to W-FM.
Rotate the knob so that the display says N-FM.
Save the setting, and you should solve it.
OTOH, if you WANT the unit to RX wide-fm in that frequency range, then you
SHOULD reset #30-but the W-FM performance will suffer, as the 50 has a
rough time breaking squelch on W-FM.

Folks, it pains me to see idle speculation on this topic!

Look at how much money and time you put into your tower...not to mention your rotor, cables, antennas, etc.

Don't guess here. Abide by the manufacturer's specs and dig your footings, pour your concrete, layout your guywires, etc., accordingly!

This is not the area to be cheap, to take shortcuts, or gamble with safety. Someone mentioned sleeping at night, and they are right!

Some tower manufacturers design for 50 MPH wind survivability...this is not really a big wind! Do you really want to risk your investment in marginal specs?

I'm not touting one manufacturer over another, but put up your tower/lines/rotors/antennas to stay up! Use the manufacturer's specs as a minimum, and if you want to get creative, exceed the specs!

Same thing goes for grounding.

I have lost a tower before, and believe me, if yours goes down you are talking thousands of dollars and dozens of hours of time to replace. A few extra feet of digging, or a few extra yards of concrete, some extra grounding, or a few hundred extra bucks for new guywires and hardware is CHEAP compared to the consequences!

OVERDESIGN your tower and it will outlive you!

My $0.02 worth! Good luck and 73

Dan

When I called to enquire regarding a bug in ADMS-1C, they verified that
there was INDEED a bug.
They sent me, at NO charge, a updated version of ADMS-1C which sure enough,
did not have the bug.
Also, major version updates are only $20.00.
All in all, a good deal.

>I am looking for comments from anyone owning the 746... any major problems???
>any idea why Icom is now offering $200 additional discount??? From what I have
>read and heard - it is a great radio.. Does it receive 108-174 mhz??? original
>QST write up indicated it had extended vhf receive????? thanks
>trg150@aol.com

The $ 200.00 discount is due to the time of the year. In Japan most
manufacturers run a fiscal year which is different than the calendar
year. The general Japanese fiscal year runs from April 1 through
March 31 so this means these companies are in the last two months of
the business year and now they do creative things like rebates and
discounts to push sales " over the top ". Enjoy it and reap the
benefits as likely April 1 the many prices will return to normal.

+AD4-I suggested hiring an engineer. Also, what would the manufacturer know
+AD4-about the soils at any specific site?

The tower manufacturers have far more extensive experience than do the typical civil engineers you might hire for +ACQ-250. The civil engineering standard most closely related to tower construction is for transmission line towers and electric poles. +AFs-And I thought electrical engineers put in big safety margins... you should read this standard to see what MAJOR safety factors are applied.+AF0- Radio towers are generally designed to EIA standards.

For +ACQ-250, as you say, the local civil engineer will note the type of soil and send this information to the tower manufacturer who provides the actual design. When he gets this information back, he then signs off on it. He will not do a full analysis for only +ACQ-250. In fact, most of this fee is just for his signature on the building permit. Note I am not saying to bypass the local engineer. He earns this money by taking on liability if the design fails, and in many communities this is required. Just don't expect the local civil engineer to do a full analysis+ACE-

Hi Michael--

I have owned a Scout for almost two years. Love it. It is a *fabulous* CW rig. Good at SSB also. Great audio, transmit and receive. The variable IF filter works well, as does the NB, which is a $20 (Cheap!) option. While I havent used the SGC-2020, I have heard that the receiver isn't very good, certainly not as good as the Scout. Sure, the SGC comes with all bands, memories, where the Scout uses plug-in modules, but that shows up (I think) as noise and poor audio in the receiver. The Scout has 50W for the SGC's 20 (about 4.5 dB better), and if you are a CW op, the keyer/QSK are Tentec, as in the best on the market! I'd like to have the split capability of the 2020, and the memories, but I am very happy with the Scout.

p.s. I am beginning a design for a switchbox that will house *all* the band modules, so band switching will become a snap. Please email me if anyone out there has done a similar project.

thought you may enjoy the following article.....W4vr

Tapping a farewell to dots and dashes Tuesday, February 02, 1999 By JOE FROLIK NATIONAL CORRESPONDENT The Morse code, a system of dots and dashes that helped settle the Civil War, open this continent and fuel a 19th century information revolution, is rapidly disappearing into the history books it helped write. The code was officially retired yesterday by international maritime authorities, shelved in favor of satellite technology as the accepted way for passenger and cargo ships to announce distress. Future Titanics will depend on satellites, not SOS's, to call for help. The shippers thus join the Boy Scouts and most military personnel in having abandoned the electronic alphabet. But for many of the United States' estimated 700,000 amateur radio enthusiasts and their fellow "hams" around the globe, Morse code remains an integral part of communication. "We are still using it," said Gary Dewey, a ham operator in Independence. "We might be the dinosaurs of the system." When Dewey sits down in front of his radio, he can either speak into a microphone or tap Morse code with his telegraph key. Voice communication has obvious benefits, not the least of which is that it is less grueling mentally. But for long-distance communication, Dewey and many other hams prefer Morse code. "The beauty is it's an international language," said Dewey. "Russians, Turks, Israelis, all of them can send you information in Morse code." Would-be ham radio operators still must learn Morse code if they hope to obtain more than an entry-level license. Most do so by using audio cassettes, often as part of classes organized by local ham radio organizations, said Tom Wayne of Bedford, president of the Cuyahoga Amateur Radio Society. Operators such as Dewey and Wayne cling to a system developed around 1840 by Samuel F.B. Morse, the American inventor of the telegraph, and slightly modified for international use about a decade later. Short sounds (or flashes of light) called dots and longer dashes stand for letters, numbers and punctuation marks. By the mid-19th century, Morse's code and his telegraph allowed for almost instant transmission of news and messages across continents and under oceans. Wireless radio telegraphs first clicked their messages in the 1890s, enabling ocean-going ships to send and receive information. Other technologies have long since supplanted most of the Morse code's role aboard ships, but for a century, it was the way to signal for help. That's when "SOS" entered the world's everyday lexicon. According to the International Maritime Organization, SOS does not stand for "Save Our Ship" or for anything else. Dot-dot-dot, dash-dash-dash, dot-dot-dot simply seemed easy to remember. Soon that use will be little but a memory. The trend away from Morse code has been building for years. While the Navy sometimes still uses Morse code to flash messages between ships in a convoy, Coast Guard personnel no longer are taught it. The Boy Scouts also stopped teaching the code and its even lower- tech flag-signaling cousin, semaphore, more than a decade ago. "Morse code stopped being the means of communication long ago,"

said Glen Nekvasil, communications director for the Cleveland-based Lake Carriers Association, whose members operate commercial vessels on the Great Lakes. "This is the age of satellites." In 1988, the United Nations-run International Maritime Organization required that passenger and cargo ships equip themselves with the Global Maritime Distress and Safety System. Now, when someone aboard a ship in trouble presses a button, a continuous signal relays from satellites and triggers alarms at listening posts and other nearby ships. The signal contains the distressed vessel's identification number and its exact location. Nor does a telegraph operator any longer have to remain at the key, tapping out S-O-S and hoping that somebody out there hears and heeds the call as the ship slips into the deep.

Since I am at work and my rain gauge is at home, I don't remember the model.
It is the one with the red LED display. It uses a tip bucket. Every time
the bucket moves to the other side, a magnet passes a reed switch which
increments the display by 0.01 inches. If this is the correct gauge, I do
have the manual.

Well, by your standards, then Radio Shaft (heh-heh) should be taken to task for ripping off the public for selling 9 cent transistors for 2 dollars, etc. That's even MORE markup than this Dutch guy!

I see nothing wrong with him charging those prices, because the laws of supply and demand will assure that he won't get any business, plain and simple. What you should be doing instead of naysaying is start your own parts supply and compete against him; just imagine all those Ferengi PROFITZ!. But then, I've never known you to take that road, you're a dyed in the wool naysayer.

Almost as bad as the hospitals. The past week I saw one news peogram, I
believe it was Dateline, take a hospital to task for charging something
like lebendey-leben thousand percent profit on an 11 cent Tylenol
tablet, for example when they billed the patient. If you like to
complain about ripoffs, then complain about the ones where the victim
doesn't have a choice about it.

The Scout is a good radio as long as you have 13.5 to 13.8 volts DC on it. It will not run well at all on a charged battery by it self. A battery is at full charge around 12.7 volts, but the Scout needs about 1.5 volts of over head to make the internal regulator work a 12v DC. Any thing less then 13.5 to 13.8 volts and pelople start telling you your CW is drifting all over the place, and on SSB they tell you that you have distorted audio and that you have RF getting into the radio. The problem is the radio is starved for voltage. I found this out the hard way. Even got a letter from and OO curtesy of TT. It says in the manual it will run on 12 to 13.8. Not true. It needs 13.8 and then it's the raido is as advertised. Not an emergency radio when only on a bettery. Works fine in a car at idle because the alternator will idle at 13.8 volts DC.

There is no magic formula. Trimming antenna's is basically a cut and try.
Moving it from the side mount to the top will likely change things. Which
way is another matter. Generally speaking a antenna mounted close to a
conductive device will cause it to show strange swr. This is due to either
capacitive effect or reflections from the surface. Thus the swr indication
may or may not be actually as bad as is being read. The placement of the
swr meter in the line will also effect a reading. So basically I'd suggest
you NOT cut it and try a different position.

Source record: 117677
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi People
What is the skinny on the IC-2710H?? Any known problems?
Is the display easy to read both day and night? Is the extra wide rx out of the box or is a mod necessary? Can the chassis be left in the trunk with only the little front of the rig in the cab? Are there wx related problems if chassis can be left in trunk? (too hot or too cold) Any words of wisdom on this model will be greatly appreciated. I am also looking at the FT-3000, but considering saving up a bit more for the Icom. Thank you.

>model it is. It is a 3 element beam with a 14 foot boom. I know it is
>a 10-15-20 meter, but I think the traps have been modified or repaired.
>I an looking to set it up for the phone bands in the 10-15-20 bands.

To set it up for the phone subbands align center Dimension (between traps):
Director 16' 1/4"
Radiator 17' 1 1/4"
Reflector 19' 3"

>Can anyone help identify the antenna to what model? What should I look
>for in the identification? The shortest elements has a 14 turn trap and
>a 23 turn trap. I haven't checked the other traps to see how many
>turns are in the trap.

Mosley TA-33-M:
Director 14/23 turns
Radiator 14/24 turns
Reflector 15/25 turns
Smaller coil should ALWAYS be nearest the boom.

73, Alex KA2R.

Sorry Charlie (or is it Baby Huey?)

There are no "amateur telephones" used on TexNet or any other networks that I am involved with.

We don't use any 'telephone' modems on any of the TexNet nodes. You know that.

You harp on these issue because others who don't know the facts might listen to you and that it isn't about what is good for amateur radio, but all about personal attacks against a few that you believe did you wrong at some point in the distant past.

I sure wish you would get your facts straight.

The networking technology that TAPR is currently working on doesn't utilize 'telephone' modems. It is all RF based. Radios talking to other radios. We aren't building telephone modems into any of our projects. No sir Huey.

Like the Spread Spectrum Radio Projects
http://www.tapr.org/tapr/html/taprfhss.html

or like some of the future 56K-3Mbps stuff that is in the pipeline.

or the PIC-Encoder project
http://www.tapr.org/tapr/html/pice.html

All RF based stuff.

But then again, when did you ever really worry about what is right over what sounds good to those that don't know what the real history or facts are.

Cheers - Greg Jones, WD5IVD

Many towers are rated for freestanding use, including crankup towers.
The amount of and shape of concrete base required is provided by
the manufacturers, of course. Get the information from them.

As an example, a 51 foot freestanding crankup tower (the TriEx W-51)
requires a 30" x 30" by 60" deep concrete base. The tower is rated
for 6 sq ft of wind surface area. The base concrete is about 1.5 cubic
yards.
In it is embedded and plumbed, a steel base consisting
of three one-inch diameter reinforcing bars which contain welded-on 3/8"
mild steel plate brackets with each bracket having two 3/4 inch bolt holes
(two bolts
per leg, class V bolts). The base can be fabricated at home if you are
handy.
I dig my own holes with a shovel, so I can make all corners nice and
square
(makes the maximum amount of rigidity in undisturbed soil), and besides,
the digging is free this way, with minimum mess.

I think you're generalizing a little...TA stocks a lot of the same high
quality hardware as you'll find from the principal distributors/jobbers.

TA also fulfills a major purpose - minimum purchase mailorder in a
dwindling parts market for the homebrewers.

And as for Radio Shack - where else are you going to pick up a NPN
transistor for your Sunday afternoon rainy day project?

Gareth:

Never had the Icom 2710, however it is being discounted right now at the same price as the FT 8100 for $449.00. At Texas Towers or Radio City. I've had several earlier Icom dual bands and never had a problem.

As the the Yaseu Ft3000 I've owned one. The wide band mod was easy. However after sending it back to Yaesu and having the first IF replaced and aligned and still having "intermod" problems I sold it. I purchased an FT 8000 which now has been discountinued. We had a local repeater in Cedar Rapids Iowa on 146.955 the offset being 146.355. When ever that repeater was in operation if I was within 3 to 5 miles it desensed my receive. The QSO would come through regardless of what freqency I was on. I lived there for 9 years and never had a problem with that repeater on any other radio. When I got the Ft 8000 it worked just fine.

Sold the FT 8000 and am looking into the FT 8100 or the Icom 2710h.

Not in the case of a local electronics house here -- the hardware they
sell -- coaxial connecters and adapters, for example -- are much, much
higher quality than TA has. I know -- I looked in the Denver TA store
to see what was in their bins. I'm not going back, either.

J. B. Saunders in Boulder.

But then, not every place has a local supply house.

Issac,

I have a TH-77a also. The east and west coast parts and service outlets for Kenwood have the users manual. I also bought the service manual at the same time. The service manual saved me more than the purchase price (~$30) when I was able to make a simple repair myself. The BNC center conductor solder connection broke because the BNC was loose on the "chassis." If you e-mail me at rcnixon@mindspring.com I'll try to look up the dealer. Not a bad radio, if a little dated. Cheap and effective. Get a better antenna though.

From: Carl_KE4ZCL@my-dejanews.com
Message-ID: <79db3q$gd8$1@nnrp1.dejanews.com>
Source record: 117694

Is the VX-5 capable of extended receive via modification?
I'm refering to below 45 mHz and the gap between 729 and 800 mHz.
Also, is their a cellular mod for the VX-5? I know that the FT-50 (older models) and the VX-1 were capable, but did Yaesu permenantly fix this?

Thanks....73,
Carl KE4ZCL

hello, all. i have a few questions on this new used rotor i picked up.

it is recently refurbed, and reportedly works well.

first, does anyone have a copy of the manual? i would gladly pay for a copy....i would like to hook it up without ruining it!

second, mounting.

I live in an area where towers are frowned upon....sucks.
so, what i plan to do is mount the rotor on or near roof line with a 10 ft mask. then, add vhf/uhf beams for local stuff. i'm on a small hill and don't need a lot of hight. should i get a small roof mount tower for my house, or could i mt the rotor on a vent pipe and then guy the mask????

thanks in advance, dave

I'll let someone else comment on the other issues, but I will share my experience mounting to a vent pipe. First, if it is not galvanized steel, forget it. This includes PVC and cast iron among other choices. Even if it is galvanized steel, it will flex enough to break the seal of the roof jack (that is what the plate under the shingles is called), or even tear it up depending how solidly the vent is restrained, and you will have rain water in your attic. There are complicated ways of getting around this, but be warned.

Ken:
I use 1/2 inch Andrews LDF-4 Heliax for all of my UHF antennas with N connectors. For a 50ft run I would recommend this or you probably can get by with 9913 type coax cable. The losses at UHF are at least twice as great as they are on two meters. I would highly recommend type N connectors and they are available for 9913 at almost any radio store. Radio Shack used to sell them but I don't see them listed in their current catalog.
You probably can find LDF-4 at local ham radio swap meets.

Dave,
It simple to hook up, terminal 1 to 1 - 2 to 2 - 3 to 3 etc... You will need 8 conductor control cable, gage of the cable is dependent on the distance of the run.

Listen to the posters who are telling you to either precisely follow the tower manufcturer's base design for your specific tower and loading conditions *or* have a registered professional engineer with the proper credentials and experience in this field do that design work for you. Or both. The liability penalties for which you can be held personally responsible can be enormous if the thing fails. This is not an area for "experimentation" or "home brewing" or old wives tales or eyeball engineering suggestions passed around by the professionally unqualified.

>CW rig.
>Will White, KD7BFX

You forgot to mention that on CW the Scout jumps around in frequency due to it's LC oscillator controlled in spurts by it's frequency counter. Some find it annoying, I just think it sounds like a boatanchor. (Although they drifted and didn't jump. The Scout is visa versa, it keeps jumping back on frequency as it drifts.)

I believe the SGC2020 uses the PL loop design so that wouldn't be a problem.

Hi John OM,

Good to see your real-world comments on hiring "professionals".
There seems to be this almost childlike trusting and blind confidence
among
so many people, that if you hire someone with the "credentials",
you will get expert and accurate advice. Or if you get a 'permit' and have
something 'inspected', that that assures quality. It does not.
As a prudent person, (and an electrical engineer) I would not even
blindly trust a physician's judgment, and likewise a Professional Engineer.
The only safe way I know of to hire expert advice is to do a lot of homework
on your own so that you can at least know the questions to ask in advance,
to test the validity of the advice you get, or the apparent knowledge this
person
has about the subject. To do otherwise, you are just totally in the dark,
and
ripe for plucking, as the saying goes. This goes for any purchase, of
course,
not just technical advice. There are a lot of people to take your money
out
there, but very few real 'experts', unfortunately.

73,
Don, W6JL

Clinton, didn't you know? Oh yes, Clinton has nothing to do with this thread.

Clinton has a lot to do with this and every thread on the Internet as he is the one who pushed the *Information Superhighway.* He got at least one thing right. Right or wrong he wtill represents the American Presidency, C-in-C, etc. and probably a better president that Oliver North could ever hope of becoming...someone else who lied under oath.

This fact is evident by looking at the decline of new amateur licenses
being granted. Also, the median age of hams is getting significantly
older. The ARRL figures that by doing away with the code requirements
----
>This poster made excellent comments. Before the Internet became popular I was studying feverishly for an amateur license not because I was interested in electronics but because I wanted to communicate with people from other parts of the world and US. With ICQ, MIRC, e-mail, and internet chat channels, communication by dits and dahs seems quite antiquated---now I enjoy "chatting" via my computer and don't have to wrack my brain about whether I heard a U or S. My ear is not that discriminating at my age(50+).
> Why is Amateur Radio dying? Because people such as yourself are carrying on a "holier than though" attitude towards those who don't yet know the code. Your attitude disgusts them, and they have no desire to become what you already are.

>>>AMEN!!!! BTW you code lovers, what are you doing chatting via telephone in this NG when you should be oscillating your key (BIG GRIN).

Whatever direction amateur radio takes, it's still a great service,
albeit it may become a threatened species.

My 746 does the same thing. When I connected it to a deviation meter, I discovered that the mic. gain setting I used for ssb (when the compressor is engaged) provides 3-5 KHz deviation on FM. That is well within the usual limits.

73/Steve - W4FMD

I have for sale Henry Model C130A30 FM VHF amplifiers.

These are commercial units, that can be tuned between 135 - 175 Mhz. They are rated 130W max out...20 to 40W in...

Units have commercial filtering on output, 70Db harmonic attenuation.

Price is $85 each + shipping, tuned and tested to your specified frequency.

Trades considered.

456. Icom 746 and ALC

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-05 00:00:00 UTC
From: "Alan K. Adamson" <ne1h@bellsouth.net>
Message-ID: <UGqu2.360$0t.396386@news4.atl>
Source record: 117719

Anyone else experience this? The documentation states that you need to adjust the mic gain in FM, CW, RTTY, etc to make sure that the ALC stays within range.

Ok, how do you do this. I can adjust it in SSB, but in FM it goes about 3/4 scale and not fidling with the front or the rear gain knobs do anything.

Anyone know what the real adjustment procedure are suppose to be???

Alan

457. Re: Icom 746 and ALC

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-05 00:00:00 UTC

Message-ID: <36BA469B.83E7AD68@NOSPAMworldnet.att.net>
Source record: 117720

The notation is the manual is incorrect, the ALC applies only to SSB,
not FM, CW, or RTTY. I don't know what the ALC meter indication means
(if anything) in modes other than SSB, but it is not setable (nor should
it be), and you can ignore it.

459. Freeband Software Mod FT50RD

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-05 00:00:00 UTC
From: George Galanis <george.galanis@dsto.defence.gov.au>
Message-ID: <36BA5167.2731E93B@dsto.defence.gov.au>
Source record: 117722

Hi,
I just bought a new FT50RD. It works really well apart from the minor bugs that are well documented on the web. I wanted to do the freeband mod so that I could have access to our UHF CB band (476.4 to 477.4 MHz) in case of emergencies. I found some info, from Ingra-Beton dated 31-3-97 (http://members.aol.com/aeinm/ft50/articles.txt), on the web indicating that this mod could be done purely through a modifaction of the template file generated by the ADMS-1D software. However when I looked in my template file, the data did not appear to match that in the web article. I zapped the file with the recommended changes at locations 0CE7 and 0CE8 and uploaded it to the radio succesfully, but it did not make any difference.

Has anyone been able to do the Freeband Mod through changes to template files? Does anyone know if it possible, or is the only way to do the Freeband Mod by modifying the hardware? I notice that the VX-1R can be modified by the template method and it seems to make sense that this should be the case for the other Yaseu radios. How do you find out which address to hit? Is there a technical manual that has this info?

It's fascinating but frustrating.
Cheers from VK land,
George VK3BGJ

My friend has some miscellaneous equipment for sale for the FT-530.
They are as follows:

1, MH-29 microphone which is in fair condition. He's asking $45

Both batteries below are brand new.

1, 12V 900ma NiMH 5W battery pack. He's asking $40

1, 12V 800ma NiCD 5W battery pack. He's asking $35

If interested, email me at the above address. All prices are negotiable
so no reasonable offer will be refused.

466. Re: MFJ 259 SWR analyser failure

Message-ID: <79duib$h3n$2@208.207.71.153>
Source record: 117729

MFJ gear is known for intermittant problems, which mostly
seems to be due to lack of care and attention to detail at
assembly. Look for bad solder joints, poor connections where
mechanical connections are necessary to conduct electricuty,
like the screws that hold on a SO239 antenna connector, that
sort of thing. You will probably be able to fix it yourself.

Bunch of groups snipped. What you have is a battery pack designed for
use with NiCad cells- 10x1.2 volts. Radio Shack used to have a simple
aluminum form that would replace same that was used in several of
their CB walkie talkies. The idea of the dowel and the thumbtack
should work nicely.

Has anybody on this NG ever seen a tower that failed because of the foundation? Probably not. Most if not all towers that have fallen down fell down for reasons that have nothing to do with the foundation. Most towers that have fallen fell because of a guyline failure, and this guy wants to install a freestanding tower. Dig a hole, don't worry about soil mechanics, (Proctor's,Atterburg limits, hydro's,whatever)do what the manufacturer says and you will be all right.
As far as hiring a PE, don't waste your time or money. A lot of them I have had to deal with couldn't find their ass with both hands and a dog. To be fair, a lot of the PE's I have had to work with were really sharp and I learned a lot from them. However, in the last year I have had PE's ask me what the wooden stakes with the C's and F's are about (cut out this much soil, fill in this much soil), and I've seen blueprints that were stamped by no less than 12 PE's that had storm drain outlets that faced UPSTREAM into a drainage ditch. Probably wore out the rubber stamps approving that crap.
Meet or exceed the manufacturer's spec's and you will never have a problem.

Hi Michael,

I Have both a Scout and a SG-2020 each rig has it's advantages and disadvantages. The Scout has much better audio for SSB and because of that I ended up putting it in my car. The 2020 has more bells and whistles and if you don't mind semi-break-in and a somewhat noisy relay makes a fun CW rig. I have been using mine QRP and have had great success. I had both on the bench as QRP CW rigs and the sensitivity of both rigs was pretty close but on weak signal work neither rig could pick out signals as well as my TS 950SDX (duh, could it be the extra $3500). All-in-all it's really a matter of operating preferences and what is fun for you. The SGC offers a lot of features the big rigs offer with no messy module switching. The Scout offers great audio, smooth QSK and a much more readable display.

If you have any further questions please feel free to email me.

The only apparent way to turn this off is to disable keyboard beeps altogether. Is there any other means to just disable the beeps on received signals during scan, but leave the keyboard beeps alone?

I have for sale a Yaesu FT-901DM 100W HF transceiver. Excellent condition with both operating and service manuals. Comes with mic and all power cables. Works on either 120 VAC or 12 VDC. This was Yaesu's top of the line rig in the late 70's.

160M-10M (no WARC)
Speech processor
Variable bandwidth tuning.
CW crystal filter.

$475 or best offer.

Hi Group!
Akihiro Matsuda, JI3BAP has recently received his US ticket as AB0IH. Aki works in our research laboratory here at the University of Colorado, and is a member of the UCCS radio club. His Yaesu FT-50, a japanese model, will only transmit below 146Mhz, which rather limits his participation in many of the local nets. Question, then, is there any reasonable way to get his radio to operate over the full 2m spectrum we enjoy here in the good ol' US of A ?
Thanx! Steve Jernigan KG0MB

PS contact Aki directly at <a.matsuda@ibm.net>, e-mail me, or post here!
TIA, again! S.

Hi John,
The knob marked MIC is the microphone gain.

The knob marked CAR is the carrier level output for tune up and CW...it
could be thought of as a cw power output control.

It has no effect on the transmit power on ssb, which as I recall is totally
controlled by the mike level.

Hope this is of some help...it's been many years since I had a TS-130 73

I have seen towers fail due to inadequate foundations. Large towers
nearly always buckle as they collapse, so it may not be immediately
obvious that the buckling occurred due to a shifting foundation, but it
often is due to that. With short towers (and trees) it is often immediately
obvious that foundation failure is the cause, just look at the root ball
sticking in the air of a blown over tree to see this.

Heh, fellows with PE after their names can be dumb too. Credentials
are no guarantee of competence. But PEs who screw up enough lose
their certification, or can't get any carrier to insure them, which amounts
to the same thing. They are *liable* for the things they sign off.

> Meet or exceed the manufacturer's spec's and you will never have a
>problem.

Good advice in general. You usually won't have a problem using a base
that's too large or too deep. But even here there are cases where you
have to be careful. Have you ever seen a swimming pool float out of
the ground? Too much displacement for its mass. An analysis of soil
mechanics can be important. It can be especially important in earthquake
prone areas where the soil can liquify during a quake.

I would like to sell my Icom 2iA mini 2 meter hand held.
It's in very good condition and comes with box, manuals, etc. plus many accessories.
BP 120 battery case, BP 123 7.2v/1200mAh, LC-83, LC-84, LC-85 (cases to fit all batteries), CP-13L Lighter power cable, OPC-288 DC power cable, AD-26 adapter for charging on the BC-79 rapid charger (not included), and the HM-55A DTMF speaker mike.
The radio is three years old but used very little. The battery pack that came with it (BP-121) was replaced last year with a new one. The other (BP-123) works fine.
A 12v battery pack is available to provide 5 watts out but I never bought one.

I'm asking $125 for the whole package.

Thanks,
John - KB2VOJ

Hello and thanks for reading this post.
I have just aquired a National HRO-5TA1 receiver and a matching 697 power supply. Everything lights up but there is a very loud AC hum on the audio. This hum is the same volume regardless of the AF gain setting. I assume I need to replace the filter cap(s) in the PS. My question is this, what value caps are needed (I can't read the values) or could there be another problem? I am also looking for a copy of the manual and what coil sets other than A,B,C,D are there? Any help would be appreciated. Thanks,
markus

518. FS: Alinco DJ-580T dual band HT

Newsgroup: rec.radio.amateur.equipment

From: "William R. Moore" <wr.moore@worldnet.att.net>
Message-ID: <79gb59$ijo@bgtnsc03.worldnet.att.net>
Source record: 117562

I'd like to sell an Alinco DJ-580T dual band (2m/440) handheld FM
transceiver, including an MFJ speaker/mike, two 1500mah batteries @
7.2v (provides 2 watts out of the tranceiver), battery charger, MFJ-1716
longer
antenna (7.5"), and an after-market carrying case. On a scale of 1-10, its
a 9 cosmetically (some key lettering is beginning to wear off but is still
very
readable) and a 10 functionally. Also receives aircraft band AM. Original
manual included plus a better English version I found on the web somewhere.

Does crossband repeat and receives on 2m and 440 simultaneously (unlike many
of the newer HTs).

Asking $175 including shipping.

73,
Randy, KS4L

You know it makes you wonder wether or not it is illigale on FRS, I mean as long as you say with the power limits of .5WATTS or 500 Milawatts. Like someone said though, it would probly be distorted anyway, unless you whispered into the mic :)

Hi Dave......

First wiring the rotator is easy, but first, terminals 1 and 2 need the heavy gauge conductor wire, should be two of em in the cable, probably 18 ga....then 3-8 do not matter as long as the colors match at both ends....

As far as your mounting goes, I would not mount anything to the vent pipe, they are pretty brittle after a while......use the roof tower...

Good luck...Jim

540. problems with my yaesu vx-1

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-06 00:00:00 UTC
From: uhlig@alba-online.de
Message-ID: <79hcuaqah1@nnrp1.dejanews.com>
Source record: 117584

yesterday i bought a yaesu VX-1R ! i�m very happy with my new handy
exept of one small problem:

i switch to the fm-mode and try to set the receiving mode to fm-n. now
i try to scan the band in 5 khz steps. after scanning the first 5 khz steps
the receiving mode changes back to fm-w.

sometimes (after 3-5 times trying to fix the mode to fm-n) the changes
will be saved, but the scan will interrupt every scan step (5 khz). i tried
to setup up the squelch to level 9, but it doesn�t work.

i did a hard reset of the processor without success.
a friend of mine has a vx-1R also and with his vx1 it work (with all
squelch levels)

I hope you can help me.

thanks in advance

Jens Uhlig

Source record: 117585

I'd, guess about $350. I have one myself. Watch out for a unit that exhibits large drift (15 - 20 kc) in the first couple minutes of operating or one where tuning freezes after warm-up.

Also, be aware that if you buy this, Icom can't help you out later. When I had some problems with mine I phoned Icom service before I sent it in, and they basically said that their current technicians have no experience with this old rig, and I could send it in if I wanted, but I'd be paying an hourly charge that amounted to teaching a tech. how to fix this radio. Instead, they offered to send me a copy of the 211 pages from their "Tech Notebook" that tells their folks how to fix certain common things. I opted for the notebook and fixed the unit with a friend.

Also be aware that some parts are just no longer available, and there are a number of units out there which don't work because the microprocessor went south.

From: Ken Bickel <ac4vv@qsl.netz>
Message-ID: <79hktklkq1@news.megsinet.net>
Source record: 117589

Not familiar with the back end of the 430S, but in part it depends on what SSTV program you are using. Do you have an audio input jack on the back? If so, is it VOX controlled? Are you using a WIN SSTV program or a HamComm interface DOS program?

If your 430 has a VOX controlled audio input jack, and you're using a WIN program, run the audio cable from the line out on the card to the audio input jack through a 1:1 isolation transformer (available at Rat Shack).

Some programs support serial port keying if your aux audio input isn't VOX controlled. A simple relay or opto-isolator will key the rig and the audio goes from the sound card (or serial port for DOS programs) to the aux audio in through a 1:1 isolation transformer.

Audio to the computer is from your external speaker jack (use a 'Y' connector so you can plug in your speaker) through a 1:1 isolation transformer to the sound card or serial port.

I suggest putting a level pot in the audio line feeding the transmitter. A 1K or 10K pot will work.

Check the documentation for your SSTV program. Many times instructions come with it. If you have any questions, and you think I can help, drop me a line.

LOL es 73

548. Re: Can anyone help: ICOM 746 Receive Range?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-06 00:00:00 UTC
From: Clint Cummings <ccummings@mindspring.com.nospam>
Message-ID: <79hmtc$q1s$1@camel18.mindspring.com>
Source record: 117592

The upper range is disabled in different versions of the radio due to country specific receive regulations. However, this area is able to be restored in those versions. From what I have gathered from posts on the net, you will need to remove diode D1716 and/or D1717. These are located on the main board on the bottom side. Remove the bottom cover, then look for a flat ribbon cable going from the main board to a smaller board labeled "to PLL". The diodes are located in a line close to this, between a chip and a line of SMD caps.

I imagine that D1716 will already be missing from the line, and only D1717 will need to be removed. I'm not 100% sure as my radio came with the expanded receive already enabled. However, both of these diodes are missing on my model.

As these are very small surface mount components, either really know what you are doing, or have a qualified technician perform the removal for you. The 746 is a pretty expensive radio to have an "oops" on. Icom might also perform the mod, if it would be legal in your country.

Once the diode(s) have been removed, you will need to reset the CPU in the radio. Hold down the <F-INP> and <M-CL> buttons together with power-on.

I feel obliged to throw in the standard disclaimer - I take no responsibility for anything you do, be careful, look both ways before crossing the street, etc...

Hi all -
Im moving to Kantronics TNC's and am moving out of AEA. and hence am selling them.
Prices include ups ground shipping .

AEA PK-232MBX:
Release 13.SEP.95 Ver. 7.1
S/N: M08815
Excellent condition. with 2 radio cables. one unused and the other is wired for the 13 pin acc2 on Kenwood.and of course the manual. I am packaging this with AEA's PCPacRatt for windows versions 3.X/95/98. This is a easy to use mutimode terminal program based in point and click. Also I am including LogWindows, AEA's Logging program. It work with or without PCPacRatt and most any callbook CD. Make for a nice contest package. All the software has the manuals, disks (3.5 HD) and orig. boxes.
$195.00 shipped

AEA PK-88 with mailbox. in great condition with the manual
$70.00 shipped

AEA PK-90 with manual.
$55.00 shipped.

Thanks for peeking at this.

Source record: 117595

The SM220 with the 8 mhz pan adapter works fine with the TS850 as a band scope. I have a cable from the if out on the back of the TS850 into the the pan adapter. However I have not been able to use the SM220 to monitor received signal waveform. To do that you are supposed to run a cable from the if out to the vertical input on the front of the the SM220, but when I do that apparently there is not enough
output if signal from the TS850 if out to make it work. ---- Steve KK9ZZ

My manual is out on loan, but 20-30ufd at 350 will do it. You just need to get an appropriate size. Antique Radio has some quite small electrolytics that you can put below the chassis and just un-wire the originals. Don't think its the rectifiers, as they tend to short and blow the fuse or whatever! hi de Jeep - K3HVG

They all "sort" of work, but are not worth the investment! Audio DSP (sic) is like closing the barn door after all your livestock has departed. If you need a simple audio filter, get one of those. I have a 599zxx and its kind of cute. It is a pretty good audio filter but it will not bring back the dead!!!

I recently purchesed this HT and I'm having trouble with the squelch. When I turn the radio on, the static on the channel will sound. I then turn the squelch up until the static goes away (almost all the way up) and then if I turn the squelch back down, the static doesn't come back even with the squelch off. If I transmit with another HT right next to it, it still won't recieve. The signal meter will go up, but no sound. I have checked the battery (7.8 V out of 7.2) and the DTMF squelch is off. The guy I bought it from says it was working fine when he had it and it was packed well for shipping. Am I missing something simple here? Any help appriciated.

566. VX-5R

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-06 00:00:00 UTC
From: Kevin Crozier <kdogcrozier@my-dejanews.com>
Message-ID: <79idof$j8l$1@nnrp1.dejanews.com>
Source record: 117610

I have had my VX-5R for about 2 weeks now (longer than I have had my call sign in fact) and I am quite happy with it.

However I have tried to reset the Battery Utilization Monitor using the directions provided with the radio i.e. press and hold the F/W key and then press the 6 key but all I get is the memory store function.

I didn't see anything about this in the Errata sheets.

Any one else have this problem? Mine is an earlier one as it still has the CTCCS scan bug.

Also, has anyone figured out how to remove a channel from a channel group? I have noticed that in working with the channel groups that F/W + 4 takes into them as the manual states but pushing F/W + 4 again doesn't resume normal operation as the manual states. The only way I have found to get back out of the group mode is to hit the vfo button.

Has anybody else noticed these problems or did I just end with a very early VX-5R with really buggy software.

Thanks for any help. I am new to this hobby and keep learning more and more everyday.

Thanks,
Kevin

Thanks very much to everyone for the leads and tips on
the dummy AA battery request. I did check with our
local Radio Shack, and the crazy dummy AA batteries are
$3.99 each in their replacement parts list. I may try
the wooden or aluminum dowel method too. Much cheaper
than the pre-made RS part! Thanks again! Steve
KC6IJM.

574. Kenwood TS570: Noisy IF Filter?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-06 00:00:00 UTC
From: Al Williams <alw@al-williams.com>
Message-ID: <ebKIC3jU#GA.227@nih2naae.prod2.compuserve.com>
Source record: 117618

Hi,

Just bought a 270Hz CW filter for my TS570 and installed it. It seems to work (yes, I set the menu to tell it what was there), but the noise is higher with the filter engaged. In other words, if I set the DSP to, say, 100Hz and tell the menu system that I have the 270Hz filter in, there is a lot of noise on the signal. If I turn the menu to "off" so that I use the normal IF filter and just the DSP it sounds much quieter. Is this normal?

I just found a Hallicrafters S-108 in really nice shape with the
original manual.
It works fine. What would be a fair price to pay the gentleman who has
it?
He's not sure what its worth.

Please reply to: puccini@erols.com

Thanks,
Gerry

Source record: 117420

i bought the pressure transducer when i bought my radio...
it is simple to install.
operation is completely decimal, just like the temperature.
instead of displaying barometric pressure in inches of mercury, it is
displayed in 'hpa'.
altitude will be displayed in meters instead of feet.
i have not 'calibrated' my rig yet, so i don't know how accurate it will be.
i would guess you could drive to your local airport and get the data to
'calibrate' your rig.
have not tried that, though.
the barmetric pressure and altitude displays do work, though.
i guess it is just a matter of personal preference...
i did notice in my rig, setting the 'home' memory channels did not work as
the manual described.
there was nothing about this in my manuals addendum.
to set a 'home' channel (one allowed per transmit band)
after pressing the 'f/w' key for one second, the 'hm/rv' key had no
function.
press the 'f/w' key momentarily, then the 'hm/rv' key, and the rig will save
that channel as your home freq.
after the memory is set, you can access the home channel for whatever band
you are in by pressing the 'f/w' key momentarily, then pressing 'hm/rv'.

>

Looks like a receive only or perhaps a very low power UHF Radius product
(M100-M200 series). You can call Motorola at 1-800-422-4210 and get assistance
in identifying the exact model and which programming software is used for it.
Good luck.

581. opening laptop battery packs

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-07 00:00:00 UTC
From: nworbekim@my-dejanews.com
Message-ID: <79l1hiini1@nnrp1.dejanews.com>
Source record: 117425

Hello, I am looking at a couple of my laptop battery packs here and wondering how in the world I can get them apart to rebuild them like I do my HT packs. I have tried to pop them open with my little blades like I do the others, but its almost like they are welded together or something.

These are Compaq batteries for the LTE LITES....

Any ideas? I am puzzled...

thanks!

582. For Sale: Drake TR-4, MS-4, AC-4

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-07 00:00:00 UTC
From: kd5gch@usa.net.NOSPAM
Message-ID: <M8nv2.5861$OS5.6200560@news3.mia>
Source record: 117426

For Sale:

Drake TR-4 Transceiver + AC-4 Power Supply + MS-4 Speaker

Comes with original manual, and cables.

Very good cosmetic condition -- this rig is older than me.
Top of TR-4 case has scuff marks in the paint and two small
dents from the feet of the MS-4/AC-4 that rests on top of it.

Front panel on TR-4 is in excellent condition, and all knobs
work and are present.

Powers up fine, all tubes light up. I have not tested the
tx/rx abilities, and I am sure it needs to be aligned and such.
Because it is so old, and I have no way of knowing how well it
works, the units are sold as is.

$275 + you pay shipping from Baton Rouge, LA 70808
(I will ship it any way you like, as long as you cover shipping costs)
Will ship same day money order is received, or wait 5 days for your
personal check to clear.

To be sold as one package, I would rather not separate the units.

Email if interested.
kd5gch@usa.net

Peace and 73

ON my 570D, the mic gain has NO effect on output OR meter readings when the compression is activated - I can turn the mic gain totally off, or wide open, and the output apparently is unaffected... I have assumed that is due to the output level, compression and ALC being "fixed" once set thru the menu settings, and then activated by the compression button... Otherwise, when compression isn't activated, the mic gain is normal... By the way, I have mine set for 10 db compression...

And I'm STILL looking for a way to increase my output power from it's current 70-80 watts to a bit over 100...

HTX>-<202 (190-1120) Hints and Tips Faxback Doc. # 15564

This radio is likely to get an ERR2 when running off a cigarette lighter.
This is due to RF feedback which travels from radio to rubber duck to
power cord and back to radio. The best way to fix the ERR2 is to use an
external antenna.

The democrats like this kind of individual. So unaware of the world that
he will believe anything that he is told. It's hard to believe that there
are people this dense out there but apparently there are a lot of them.
Well you say that "he at least got one thing right". Considering the fact
that he had nothing to do with that "one thing" I guess you would have to
say that he is batting a zero.

Hi, I've recently purchased a DX-394 from Radio Shack and while the SW reception is alright (I'm simply using the included whip antenna for now) but the MW reception is, to put it mildly, crappy, for example I can get BBC better than the strongest AM stations in my city! Is this normal or did I get a bad radio? Should I take it back to get fixed/replaced? (I still have a year warranty.) If you can help please send me e-mail at 103261.524@compuserve.com because I don't check these groups that often, if you just want to laugh at me behind my back though posting to here is fine. Thanks.

618. Kenwood TS-140S 45-60 MHz TX?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-07 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <79imog$4pk$4@clarknet.clark.net>
Source record: 117474

I found the mod for the TS-140S, snipping diodes 29 and 31.
Fine, so I think diode 31 gives you more power on all the bands
because i did that first. Then I snipped 29 and reset and checked
it out. It added 45Mhz-60Mhz to my receive, except for one little
problem. When listing between 45-60Mhz, the display goes blank
(except for dots), and it does Morse code that says "unlock". I
checked the service manual and the normal manual and this is a
"feature". It turns out that the processors catches the fact that it is
recieving out of the allowable area and immediatly shuts down
the reciever volume. Well i don't call that much of a mod.

So how can i actually LISTEN to stuff from 45-60Mhz? Also, It
now transmits from 49 to 55Mhz, but that is not so usefull as i'm
interested in getting it to work on 47.xx Mhz (Red Cross Freq).

If anyone can shed light on how to trick the processor into thinking
it's not out of band, so that i can actually listen, or if i've done the
wrong mod....Or if there is another mod... i would be very greatful
for this information. I've searched the WWW endlessly, and other
than a short note of some guy telling another to snip D29 and D31,
I've come up with nothing substantial...Let me know if you have
anything that might be of help.

Bob,
I just did two similar htx-202/404 packs for $18 each. I chose to use the original 7.2V/700mah inserts so that I could continue to use the original wall charger and charging time.
I could have wired up some $1.50 batteries much cheaper, but you have to watch the overall length so that the insert will fit back in the pack.

Hello. I have 2 units for sale. I prefer to sell them as a pair.

(1) Icom IC-R71A. Unit goes from 100Khz to 30 MHz,all modes
including RTTY. Unit is atleast an 8 on 1-10 scales. This unit works
great.

(2) Icom IC-R7000. Unit goes from 25 to 1300MHz(cell phones included).
Again unit is atleast an 8 on 1-10 scale. Unit has scratch on left side of
chassis and needs 1 minute warm up for display to light up.

Both these units are in great shape and work excellent. I am asking
$1500. or best offer for the pair. I will except pre payment of money
order for the units. I will ship them UPS at no charge.
Thanks,
Glenn

Doh!

I just tried the battery monitor reset key strokes as defined in the manual and what do you know it works.

I guess the blinking numbers (for the memory store function) were throwing me off.

However, has anyone else noticed that you (or at least I can't) can't get out of the memory group function by pressing F/W and 4 again?

Anybody have any thoughts on the barometric pressure sensor? I need to order another battery so I figured I might as well throw the sensor in as well.

651. Help - Azden PCS2000 Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-07 00:00:00 UTC
From: Deon Erwin <zr1dq@iafrica.com>
Message-ID: <79kipv$1i8h$1@nnrp01.iafrica.com>
Source record: 117507

Hi

My Azden PCS2000 transceiver died and the faulty component is a TMS1000NLC, a 4-bit processor on the control board, designated as IC401.

I understand that the TMS1000NLC is obsolete and I wish to hear from anyone who suffered the same fate and used and equivalent IC to solve the problem. I tried an equivalent IC, but it does not work. I am still awaiting a reply from Azden.

I may be contacted direct at zr1dq@iafrica.com.

Greetings from Cape Town.

Deon ZR1DQ

652. milspec modifications - like signalone

Newsgroup: rec.radio.amateur.equipment

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

The IC-781 is regularly modified for military use by getting turned into the signalone. I was wondering if anyone knew if any companies do this with the yaesu FT-847? I want a "wonder radio" that is tough enough to fall off the back of a truck on a dusty dirt road, and still be fully funtional. even if it takes a special container. Low power consumption is a plus.

Hi Joshua,
I also have a HTX202 and I find that the radio is very sensitive on the receive side. I also have an HTX404 and when I xmit on that radio, my HTX202 sometimes comes on with static so I have to give it alittle more squelch.
From the sounds of it Joshua, you may have to pay a visit to a repair shop.

Good luck

YUP - always SOMEONE out to air some trivial "slight" they usually DESERVED as the result of poor attitude - and THEN they immediately want to sue someone for all the "mental anguish" they brought upon THEMSELVES!

Rest assured that for ALL your efforts, all you will receive will be elevated bloodpressure and spinning wheels...

I have a SGC 230 that's been back to them TWICE over the last 5 years or so for failures I brought upon myself thru poor electrical connections - they have ALSWAYS been fast and courteous - and upgraded my tuner BOTH times during repair...

Now, WHY do you suppose they would single YOU out for abusive treatment? Could it be YOUR attitude in dealing with THEM?

NAHHHhhh - SURELY not......

Greetings Noise Warriors:

Would one of you kind souls be good enough to give me a copy of the schematic diagram (& parts list) for an MFJ-1026 or MFJ-1025 RF Rx Noise canceling unit? I would like to look it over and see if I want to mimic it in home brewing my own unit. There are some old QST articles, though the write up for the MFJ makes it sound like a better design.

My Xcvr already has a separate Rx ant input and I donï¿½t need any antenna switching capability. I also intend to H.B. low noise Rx antennas to feed into something like this.

I donï¿½t think there are any moral or ethical problems in copying the design as long as I donï¿½t try to market such a thing (and I donï¿½t).

Have a pretty nice condition ic-3200. The radio comes with manual.
mounting bracket, and box. I am interested in one of the following
items.

220 MHz synthesized Mobile, or HT no Kenwd TH-31AT/BT Please

BC - 895 Trunktracker From Uniden (bearcat)

YO-101 Monitor Scope

AEA PK-900 or pk-12/96 Tnc (pk 12/96 would probably be more negotiable
for you)? and that would be ok as well.

Dual Band HT 2/440 Or The Icom 2M/220 Ht would be nice. If idiotical
wanted my radio + cash for trade I would work on that with them.

73 & Thank You

I'm sure...

--I
>don't know how many SG-2000s are out there.

I'm rather certain of THAT, too!

> I can't speak for Jim, but
>my personal experience, involving radios I have owned or personally
>checked out combined with my firsthand knowledge of others'
experiences
>over the decades has shown a relatively low (under 5%) incidence of
>serious problems with Kenwoods and Icoms; the addition of your and
>Gary's positive luck still leaves the comparable figure for the
SG-2000
>at around 86%.

Based on exactly WHAT? WHO?

Is that to be considered an arbitrary number, or just a quick
seat-of-the-pants guess? To be even REMOTELY accurate in your quoted
figures, you would need at least 100 random customers/units - and FAR
more would be better - do you have such hard-copy numbers? If NOT,
you're merely blowing smoke!

If you consider replaced or 'repaired' SG-2000s as
>separate units, that figure goes way up (the majority seem to fail
>multiple times), to over 92%.

AGAIN, do you have an actual LIST to back up this claim - or do you
merely have perhaps 10 loose acquaintances you have managed to drum
up, and are merely interpolating from such highly limited base
numbers?

"UMMM GEE!, I know *TWO* hams with SGC stuff, and ONE of them failed for unknown reasons - so OBVIOUSLY, 50% of SGC'S stuff is failure-prone JUNK...."

Is THAT the way YOU get your percentages? If NOT, tell us how you DO obtain them!

>The real numbers may not be this
>high--

UNH-HUH! I don't doubt it for a moment!

>this is just my personal experience--but SGC didn't acquire its
>hideous reputation for no reason.

Another wild assumption - exactly HOW and WHERE did you receive and establish your rather extreme claim concerning SGC'S "hideous reputation"? Perhaps yourself and a couple of other guys? Hardly a quorum of SGC'S customer base... By the way do you even KNOW how many total SCG product units have been sold and in regular use?

I didn't THINK so... And if I'm RIGHT, how could you POSSIBLY quote meaningful "percentage" figures regarding failure rates and dissatisfied customers?

As for their customer service, it can
>range from extremely accommodating (as when a unit is under warranty,
>with the techs bending over backwards to help you) to considerably
less
>than that, depending on the moon's phase and who answers the phone;
the
>operative word is 'erratic'.
>
>Believe me, I'm happy for you both, and envy you mightily. I
sincerely
>hope your good fortune continues, especially if you take those radios
>offshore. However, I'll leave it to you to decide whether or not
there
>just might be a problem here...

I've ALREADY decided - and base on MY personal experience - and several acquaintences, I'm QUITE satisfied with my SGC tuner, it's performance, AND the way I've been treated by SGC in the 6 years or so I've had my unit - and the 2 times I've returned it for reasons NOT related to it's defects. And NO - I DON'T consider MY contacts with SATISFIED customers any more a reliable "percentage" of SGC's products and customer satisfaction than YOU should! There will ALWAYS be a few units that fail from either defects or customer abuse - that's true of virtually ALL products on today's market.

AND to think or suggest that it's the responsibility of the parent company to grant unlimited access to their bench techs, OR the company president every time some sorehead customer INSISTS on such contact is entirely rediculous! If YOU manufactured a product, and maintained a

repair/service facility - and paid pretty decent wages to bench techs to troubleshoot and repair failed units, would YOU want their productivity reduced - and YOUR expenses increased - as these techs held hands with long expensive telephone conversations to curious customers? OR, would you insist that they do what they're PAID to do - FIX as many units per shift as possible? OR as head man in the company, would you cheerfully answer EVERY complaining call from disgruntled. and quite likely unreasonable, customers - or would you instruct your secretary to do what she's PAID to do, and handle it without your involvement?

If your Ford breaks down, do you INSIST on a direct conversation with the president of FOMOCO just to appease your anger? Do you demand the head of GM to listen to your complaints about your Chevy Nova? I have LITTLE doubt that if guys like YOU were running the company and paying the bills, YOUR response would be pretty much EXACTLY as you have received!

For certain, it gets entirely TIRESOME for an isolated customer/user of a FORD, Chevy - or Kenwood or Icom - to have some unusual problem with their purchase, and IMMEDIATELY begin this massive wail of accusation and tiresome complaint as to how the company builds "junk" and abuses their customers with poor service and indifference...And ALSO claim to be speaking for "vast numbers of equally dissatisfied customers..."

And THEN, when the dust settles, you learn that the "abused" customer was himself abusive and unreasonable in his demands/expectations (Hey, after only 40,000 miles, the tires on my '95 Ford wore out, and I DEMAND you give me a whole NEW CAR as a "reasonable settlement"...) - and many times the unit in question was mistreated or was expected to perform in a manner clearly outside its specifications!

I'll be watching for your response to the *ACTUAL* numbers of SGC customers you suggest you're speaking for when you spout "percentages" and reputations...

>
> Gary - KJ6Q

I rechecked and found I had mis-stated my previous observations. The confusion arose because there are 2 independent MIC gain settings--one with processing ON and one with processing OFF. When processing is ON, MIC gain affects power, comp and ALC readings. COMP (I also use 10 dB) affects only the comp reading.

Once comp is set, I guess MIC gain should be set to make the meter readings look proper. But I still don't understand what the MIC and COMP settings actually do in the circuit. If I were to draw a block diagram, where do these adjustments appear?

Hi,
Here's some gear. It's either free or almost free. You pay shipping
though. For my convenience I ship Fed ex 2nd day or USPS Express Mail
(both have nearby drop-off boxes).

Motorola P100 Cloning Set (it's 2 faux battery cases w/ circuitry)

Motorola Spectra Base Station Power Supply. It's free, but it's heavy,
shipping will be approx $30-40.

Motorola 900 mHz Vehicle Adapter.

Trionyx 600 Mhz freq counter w/ internal (dead) nicad and wall wart.
This is $30 plus shipping.

Email me, Billy Sarokin

Propably the easiest way I have done them is to 'score' the seam with a carpenter's knife, and then smack it with a hammer(gently), of course. I have done this successfully on several Toshiba battery packs, and I am now going to have to do that on my LTE5100 pack. Oh joy...

Good luck fellas!

680. Re: Tm-g707a?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-08 00:00:00 UTC
From: Rick Pemble <pemble@earthlink.net>
Message-ID: <79o1nppaf1@ash.prod.itd.earthlink.net>
Source record: 117336

There are 2 "standard" mods from Kenwood, and one "discovered".

The first extends receive range to118.0 - 174.0320.0 on 2mtr
and a 'new' band of 525.0800.0 - 950.0

The second opens up transmit range for CAP/MARS.

The Third opens up Xmit VHF TX 136.995 - 173.995.
UHF TX should be 410-469.995

From the Kenwood site, get the mod for extended receive. In addition to the W501 jumper to cut (MOD 1), also cut the jumper next to it (MOD 2). Both of them are
obvious -- large green loop jumpers next to each other. (mod instructions can be gotten at ftp.kenwood.net) It is in PDF format and gives instruction
along with a diagram on how to cut W501 Jumper for MARS/CAP -- chop the one next to it too. That will give you the new band and 500-900 MHz RX.

For full xmit capability, follow the instructions for the TMV-7A mod with one exception, remove SM Resistor number 1 (not the number 0 for TM-V7A mod!).
The TM-V7A mod can be found at the QRZ site www.qrz.com. look under radio mods, and then TM-V7A.

Here is the text from that site AGAIN THIS IS FOR TM-V7A remove number 1 for the G707A:

Date: Sat, 31 Jan 1998
Subject: Mars/Cap mod for Kenwood TM-V7A

Remove the top and bottom covers and the detachable
face holder. Look at the p c board that is vertical behind
the front of the radio. There will be 2 small chip resistors
on the left side of the board. Carefully remove the one
with the number 0 . It will be the one closest to the left
near the grounding spring. You will probably have to scrape it off
with a pair of needle nose pliers.
After you remove it the TX should be VHF TX 136.995 - 173.995.
UHF TX should be 410-469.995

The drawback to this mod, is that you lose the auto repeater offset capability. (You have to manually enter - or + for repeater offset).

I recommend using the computer interface to program the radio. When you perform the mod, the radio resets and all memory is lost. If you have the computer interface, you can read the radio, save it, and then re-program it from the file. Much easier to program the radio, name, offsets, etc. on the keyboard then on the radio control panel.

I performed all three mods to my TM-G707A and they work flawlessly.

Cheers

Rick W4RP

If you want Garmin, for a car dedicated unit get Street Pilot not G3+, but if your department really wants to install them in the cars, none of the cheep and cheerful units fits the bill. Screens are just to small, data input is not a "snap" if you are driving. I'm sure that there are dedicated units, designed just perfect for your application.

BTW
What is exactly Garmin leading in, so far (except for Street Pilot) they seem to be following somebody... I don't think I missed any news of new products?

>Jim Crosby

Jim, don't worry about it - I too frequently respond to issues sensitive to me with a bit more "vigor" than required. Problem is, I WAY too often run into these identical scenarios across the newsgroups I travel. In the Dodge truck group, a fellow has a relatively minor problem with his fairly new truck - gets annoyed at the service department of his local Dodge dealer, and is IMMEDIATELY shouting to all who will listen as to what a POS Dodges are, and how all Dodge owners must be brain-dead to own one... In the RV group, the scenario is repeated with various RV brands - and then there's the Amateur radio recent equipment group where you'll hear these complaints addressed eventually to virtually EVERY brand radio made!

These complaints are quite frequently accompanied with wild exaggerations as to the actual numbers of ANY of the customers actually involved, and it's not at all uncommon to hear threats of legal action against whatever maker happens to be involved.

Thru the years, I have owned just about every major brand of ham equipment sold - some of the stuff WAS poorly designed and built - Gonset and SBE were among the worse in my experience - but the VAST majority of stuff served me well, was as advertised, and when service WAS needed, the service department's attitudes very closely mirrored my own. For ME, it's been unheard of to be exposed to poor service reps, as long as I've addressed THEM with the same level of courtesy I expected to receive! The few times I let my emotions get the best of me, I STILL got good service - but certainly LESS cordialy than I might have otherwise - and the difference between me and the service rep was usually purely a communication problem that was, or COULD have been easily corrected if I had been more patient! But thankfully, those incidents were few and far between.

I sincerely hope you get your problem corrected to your satisfaction, and my apologies if I offended you with my comments.

Gary - KJ6Q

Try this.Chuck the pack in a bench vise with the seam just above the vise line.
Don't squeeze it too hard or you'll mash the batteries inside.
Hit the seam with a hammer and wood chisel. Doesn't have to be a chisel,
just anything hard and very sharp. Screwdriver is too blunt.

690. Re: IC-751A vs. IC-735?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-08 00:00:00 UTC
From: Steve Dove <dsp@hifidelity.com>
Message-ID: <36BFB57F.5A3510CC@hifidelity.com>
Source record: 117346

Hi Paul,

I own and regularly and heavily use both of these radios.

IC-735 - Great small-class radio. Very sensitive receiver, reasonably good front-end (better than anything else in it's class/size/era). The stock filters aren't wonderful (the 9MHz FL-30 ssb filter is directly upgradeable to the better FL-80, but the 455kHz little ceramic jobby, oh, well, never mind) but having said that I made literally tens of thousands of QSOs with this one (and one I previously owned but daftly sold) before putting 'real' filters in it. I love it. Downsides: noise blanker sucks goats (but can be improved), lack of XIT (RIT only), internal keyer control way touchy: 12 to 35 wpm in a sneeze. The squiggly little slider controls are not for those with less-than-dainty fingers.

IC-751a - excellent 'mid-size' radio. Remember that this was their 'top-of-the-line' until the marketing department decided it needed to be in a bigger box. Sensitive, good front end, decent stock filters and options. Possibility of internal PS-35 psu (but hideously expensive if it isn't installed in the one you get). An excellent performer and still a rig of choice by many contesters. As an example of the 'class' in it's design, it is one of the very, very few radios I've seen that actually has a specific front-end filter set for below the broadcast band (<500kHz), as opposed to just faking it like most of them. Now you may well be utterly uninterested in that bit of spectrum, but note that they went out of their way to do it well. That is what this radio is all about.

One potential nasty: the '751a's microcontroller's code is contained in a battery-backed-up memory. There exists the possibility of the radio hopelessly and totally losing it's mind. That means completely. It is a long shot and I've never actually heard of it happening to anyone, but it could well anytime, given the age of these radios nowadays. The methodology for changing the battery is straightforward though, and there is also a non-battery-backed-up memory available after-market with some minor code improvements (more memories etc.) for good measure.

Both radios have mid-80s style phase-lock-loop VFOs (as opposed to today's sometimes superior DDS-based synthesisers) which nevertheless in both their cases are pretty good and quiet examples.

Both radios are dramatically improved by the addition of International Radio after-market filters, which are both better and less expensive than Icom's. Fitting the full-size filters inside the '735 is, shall we say, 'interesting' but do-able and very much worthwhile. There are a host of other little mods and upgrades that may be done to improve the radios; let me know on which you decide.

Again, because of their age, they don't have some of the bells and whistles that one takes for granted on today's radios; the one I miss most is band-stacking registers; as they are, switching between bands lands you on some arbitrary and useless frequency each time. Under computer control from a decent logging program, 'CT' or probably also 'WF1B' for RTTY it is possible to type in the frequency on the keyboard and go; a saving grace. Oh, the UX-14 computer control interface card can cause the '751a to have slightly halting and erratic tuning if it is asked to continuously belch frequency changes; that facility is best turned off and 'as required' interrogation and control used instead.

Sorry, this has turned into a bit of a 'stream-of-conciousness' exercise...

RTTY. They both do real FSK keying for RTTY; I used a '735 on AMTOR for a while, the only shortcoming being the inability to use the cw filter in the ssb or tty modes; the pass-band tuning on the ssb filters became essential. OK but not ideal. The greater flexibility of the filter selection in the '751a may be a key consideration here for you. The thermal capability of both the radios is good. Despite it's small size, the '735 chucks out the heat very well. Both could probably stand full-tilt-boogie key-down for a good 30 minutes without complaining. Ah! True anecdote: The '735 once did the better part of a full 48 hour contest in the tropics with it's squirrel-cage fan siezed - and lived.

The '751a is a (slightly) older but fuller, more thorough design and has more facilities than the '735. On the other hand, the '735 is an amazing little package and fabulous radio-per-dollar value. Pure on-the-air performance, when properly equipped with the appropriate filters, frankly, little to choose. I'll happily take either on a marauding exercise to the bottom end of twenty during WorldWide and not feel naked.

If it's going to sit at home, the '751a. If it's going to travel at all, you'll really appreciate the '735.

Cheers, and hope this is of some help,

Steve W3EEE / G3YDV

Hello
I am in the gps business. You can go out and spend what ever money or grants you have. But I would really like to you to take a serious look into Eagle for hand held. Eagle has the fastest satelite capture on the market thats for a hand held. I would really lean hard to the Eagle Map Pro. You can down load and do flash up grades through your computer. Now if you want a vehicle unit I would go with the magellan with a Differential Beacon that narrows the range more exact. If you would like to mount a good system I would also consider a Databrick computer with a lcd monitor. this is what I have mounted in my Rover for tracking and mapping.

If you would like any more info please feel free to email.

Try fox_tango@qth.net and fox-tango@qth.net. Not sure what the difference is, but they are seperate lists. Neither one is very active. To subscribe send a message to majordomo@qth.net and in the body type "subscribe listname"

> Their website appears down...
Sure looks like it. Not that it was a very good web site... I like the Japanese site(www.yaesu.co.jp), although it's impossible to read. But nice pics... I can't wait for the FT-90, but with the FT-100 being such a mess I wonder if anything will be showing up... And what's the deal with the VX-5? It just pops up suddenly. Normally it would have been listed on the Japan web site YEARS ago...

Well hello Gary,

I'm glad to see you are the same know-it-all asshole here as you are
on the RV group. Why don't you bring your idiot friend Will Sill then
you can really be a jerk.

Interesting enough I have had then same experience with my tuners
IN THE PAST. recently things have chainged. It used to be that I
could easily talk with a tech and SGC had excellent customer service.
Lately when I have called for applicaton information I have been
stone-
walled just like the original poster was. Perhaps your experience is
a
little out of date. Or perhaps you don't actually know it all, no
that
couldn't be.

Work on your tone a little why don't you? Read a little less of that
jackass Will Sill and learn to be a bit more civil.

I can tell you how to do this, but your power meter on the
front of the rig will then only go to about 60 watts. It's a
little tricky, and done thru a hidden menu.
Let me know if you're game.

I've got a similar problem with the 202. It locks up with same msg. It's due to insufficient shielding; RShack can fix the problem - for a price - I had mine done under the extended warranty and it still experiences same problem. Always happens when I use a new or fully charged NiCd, new alkaline "AA" batteries with rubber duck antenna with radio on HIGH power. Low power setting doesn't produce message.

Hi! I was hoping to gather opinion(s) from folks who have used both
rigs as to which the felt was the superior rig. I'd be most interested
in comparisons between their receivers, and RTTY operation.

Thank you,

Paul WD8DKY

Sounds a bit wide for spacing, but if it was a homebrew idea, maybe they used one wavelength spacing from REF to DE. Unusual configuration! Possibly it is a 10mx beam with a more conventional distance of .15 to .25 wavelength spacing. Even at that, it sounds like the first director is missing. What length are the elements? That should give you an idea of the band it was made for. 73 de VE6INM dbertone@flash.net wrote:

Chris,

As our esteemed leader might say, it depends what you mean by "exception". We aren't dealing with scientific sample sizes here--I don't know how many SG-2000s are out there. I can't speak for Jim, but my personal experience, involving radios I have owned or personally checked out combined with my firsthand knowledge of others' experiences over the decades has shown a relatively low (under 5%) incidence of serious problems with Kenwoods and Icoms; the addition of your and Gary's positive luck still leaves the comparable figure for the SG-2000 at around 86%. If you consider replaced or 'repaired' SG-2000s as separate units, that figure goes way up (the majority seem to fail multiple times), to over 92%. The real numbers may not be this high--this is just my personal experience--but SGC didn't acquire its hideous reputation for no reason. As for their customer service, it can range from extremely accommodating (as when a unit is under warranty, with the techs bending over backwards to help you) to considerably less than that, depending on the moon's phase and who answers the phone; the operative word is 'erratic'.

Believe me, I'm happy for you both, and envy you mightily. I sincerely hope your good fortune continues, especially if you take those radios offshore. However, I'll leave it to you to decide whether or not there just might be a problem here...

: Hi Michael,

: I Have both a Scout and a SG-2020 each rig has it's advantages and
: disadvantages. The Scout has much better audio for SSB and because of
: that I ended up putting it in my car. The 2020 has more bells and
: whistles and if you don't mind semi-break-in and a somewhat noisy relay
: makes a fun CW rig. I have been using mine QRP and have had great
: success. I had both on the bench as QRP CW rigs and the sensitivity of
: both rigs was pretty close but on weak signal work neither rig could
: pick out signals as well as my TS 950SDX (duh, could it be the extra
: $3500). All-in-all it's really a matter of operating preferences and
: what is fun for you. The SGC offers a lot of features the big rigs
: offer with no messy module switching. The Scout offers great audio,
: smooth QSK and a much more readable display.

: If you have any further questions please feel free to email me.

I believe it will convert nicely. If it's close to a 70-342, it is an 80 channel, 40 watt radio. It has an EEPROM which is programmed with a proprietary Midland 70-1000 programmer, (Good luck finding access to one). I have had such a radio on 2M in the past and it worked fine.

>I have tried to pop them open with my little blades like I do the others, but
>its almost like they are welded together or something.

Many recent battery packs are held together by gluing or welding the plastic rather than screws.

Sometimes I've been able to get them open just by putting a sharp knife into the seam and prying, working my way around the pack and breaking a little bit of the glue/weld at a time.

I've seen places that rebuild batteries hit the pack along the seam line using a hammer. This flexes the plastic enough to break the seam without doing much damage to the rest of the case. I imagine it takes some experience to know just *where* to hit and *how hard* to break the seam without breaking the case. If the pack is junk anyway, you might try this - you don't have anything to lose. Or you might try taking your pack to a commercial battery rebuilder, who is experienced at this.

I've also heard of people putting packs in the freezer for a while to make the plastic more brittle. This would make it easier to break the seam, but also easier to break the case elsewhere.

725. COMMON MODE FILTERS?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-08 00:00:00 UTC
From: Gary - KJ6Q <davison7@gte.net>
Message-ID: <79n9go$ph5$1@news-2.news.gte.net>
Source record: 117399
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

Thru the years, I have found low-pass filters to be rather useless in eliminating the typical types of local interference most experienced/caused by my HF ham equipment - most interference seems to be primary overload to telephones, solid-state audio equipment - even the computerized portion of our electric stove!

NOW, I am hearing about new "common-mode" filters, and their claimed ability to reduce or eliminate the types of interference not handled by low-pas filtering.

Question is, are these claims true - has anyone here benefitted from the capabilities of the common mode filters that they were NOT able to with a low-pass?

Body handling: Binary attachment payload not displayed: vcard.vcf

Geert, I believe that you need to connect the horizontal and vertical feedpoints of your crossed yagis with a 90 degree phase shifter. This would be a quarter wavelength (including velocity factor) of coaxial cable. You would then connect your feedline to one of the feedpoints. I am not sure which one (horizontal or vertical) would go to the feedline for right-hand circular polarization. You need to check a good book or a more experienced VHF/UHF ham. If you connect the feedline to the "wrong" antenna, you get left hand circular polarization instead of right-hand! This all assumes that the horizontal and vertical elements are coplanar, or very close together. If they are not you would have to compensate with the phase shifter. Hope this helps!

728. dual-band commercial HT w/motorola-type paging?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-08 00:00:00 UTC
From: rsimpson@cherryvale.org
Message-ID: <36be5b2c.8223524@nntp.netcruiser>
Source record: 117402

Hi all..

I posted a couple of weeks ago looking for a dual-band motorola ht, but it seems such a radio doesn't exist. So, i'm now looking for just about any dual-band commercial HT that has the HT/MT1000 style paging tones (quickcall, i think). Preferably something buff and tough like the motorolas or bendix kings.

If such a thing does exist, can it be programmed with a tone for VHF and a different tone for UHF?

Thanks!

Source record: 117404
Cross-posted to: alt.law-enforcement,rec.radio.amateur.equipment,sci.geo.satellite-nav

:My department wants to add a GPS (global positioning system) tracking
system to
:our CAD system. As it could be paid for with a grant, cost is not a factor.
At
:a recent supervisors meeting our deputy chief told us what a great system
it
:was. He even went on to tell us how the system was used to find a missing
:officer was killed in the line of duty. He told us about another department
:whos officers adore the system.
:
:We find out in the first case, the department did not even have GPS &
found
:the officer doing an old fashioned grid search. In the second incident he
:descrived, the officers on the department hate the system & refer to it a
"sgt
:in the trunk". In addition to their location, it tells how fast they are
driving.
:
:The general feeling in the room with over 100 supervisors present is it is
just
:too much big brother & very bad for morale. Only a few knuckle heads
thought
:it was a good idea. If management was so concernened about things like
safety,
:the dash mounted camera would be better. Hell, just more new cars for that
:matter.
:
:The implications of the system & being lied to really left a bad taste in
:everyones mouth.
:
:Any thoughts?

Have them buy the Garmin GPS III+. It can be mounted on the
dash. It has maps so the officer can use it to navigate. And it
can be used with a data cable to feed position back to the the
command post. Units run about $370.

The GPS III+ can be updated via computer (new firmware)
and maps can be downloaded. It also uses conventional
position data.

Garmin is industry leader. However Rockwell and Motorola
very good units.

Date: 1999-02-08 00:00:00 UTC
From: Martin <martinbk@cityweb.de>
Message-ID: <36BF363E.261A9B2F@cityweb.de>
Source record: 117406

Hello ,
I've a problem: I want to change the bandwide at the Kenwood R5000 Receiver. Does anyone know a trick or solution to get the bandwide larger as the normal setting? So 40KHz would be ok.

Greets Martin (Germany) martinbk@cityweb.de

733. 7768 Planar Triode

Hello,

You have asked for 7768 valves many times before, and I have posted
this message many times. Haven't you noticed?

7768 General Electric NOS, NIB are in stock. This is a very special
valve with a transconductance of 50mA/V and u=225
I can find a few more data for you if you want it. This is a rather
expensive valve NOK 760.- each or about US$ 103.-

Best regards,

Arnold Goksoyr

Fax +47 5769 1267
e-mail arnoldg@sf.telia.no

More than 1800 different valves in stock. Plus: sockets,
transformers, caps, resistors and books about valves and
valve equipment. Many rare European valve types.
You will find it at my homepage: http://demostenes.vestdata.no

734. Interfacing IC-707 to PC

736. Re: COMMON MODE FILTERS?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-08 00:00:00 UTC
From: Roy Lewallen <w7el@teleport.com>
Message-ID: <36BF46F2.D8F5D11A@teleport.com>
Source record: 117410
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

A standard lowpass filter lets the RF get through unattenuated but attenuates higher frequency energy. In most cases, you don't want any common-mode RF at all (as on an antenna feedline or appliance power cord), so you attenuate it as well as higher frequencies with a common-mode choke.

A common-mode filter or choke applied to an antenna feedline is also known as a "choke balun" or "current balun". Using one reduces the current on the outside of a coax feedline, or reduces common-mode ("antenna") current on twinlead type lines. This reduces radiation from the line to the types of appliances you mention, which may be far from the antenna but close to the feedline.

I've solved several EMI problems by applying a common-mode choke to the affected appliance. The interference is frequently coupled via the mains, so a few turns of the power cord (both conductors together!) through a large ferrite core can help in a lot of cases. The same technique is often effective for telephones, where the telephone wire (again, all conductors) is wound on the core. Clamp-on cores work in some cases, but since the impedance goes up in proportion to the square of the number of turns, you can get a lot more impedance with multiple turns on a single core.

Roy Lewallen, W7EL

Any experience with that radio (especially with packet-operation)? I can get it newly-used (it's only been used a few times) for $250, and was wondering how it'd work in the house with a 50ft or so antenna..

Also.. How does a car radio usually (sometimes?) compare to one "built for" the house? I don't yet need/want/understand all those doo-hickies on the $700+ 'base radios' at the store...

Thanks!

Actually Gary, my attitude did not become an issue until I realized I was being lied to and dismissed by a secretary. I still can't get a response from customer service. And I certainly do not feel singled out. Your experience is the exception, not the norm. If you are truely interested in facts, you should spend some time at this web site and read other customers' stories. The theme is always the same.
http://members.aol.com/nrs019/sgc/index.htm

In the meantime, here is my story.

I own a PowerTalk 2000 with a remote head and SG-230 tuner. Recently I sent the 2000 chassis to SGC in Bellevue for warranty repair. I gave explicit instructions that I was to talk to the tech who worked on it BEFORE it was shipped back to me. I expressed this desire again when a woman from SGC called me for a credit card number to bill for shipping back to me. I was told that it would be on the bench the next day (Wednesday) and wouldn't ship until the end of the week. I should call back the next day to talk to a tech.

I called the following day (Wednesday) and was told the chassis had been shipped back to me THE DAY BEFORE! I was also told that I couldn't talk to the tech because the techs never talk to the customer. When I demanded to talk to the head of customer support I was told nobody was available. Nobody. I asked to talk to any member of senior management and was told the same thing. When I asked to talk to Pierre Goral, the president, I was told he wouldn't talk to me. Rene, who identified herself as Pierre's secretary, admitted he was there but refused to connect me or even tell him an irate customer was on the phone to talk to him. When I asked how I could contact him, Rene told me I could email him. She said she would 'express my concerns' to him and took my telephone number. Of course, this was after Rene insisted on talking over me repeatedly to explain what great customer service SGC provides. She has no idea what I was saying because she kept talking right over me rather than listening. Not surprisingly, neither he nor anybody else has bothered to contact me, despite sending email as instructed.

I had been warned of this kind of treatment from almost all of the marine community. Every single member of the community I have talked to who owns or owned a 2000 has complained to me without exception that their radios have had to be returned to the factory for repair at least once and in several cases multiple times. The community also universally complains about the poor customer service provided by SGC. One owner warned me that SGC would not communicate with me, nor would they tell me what was wrong with my radio despite explicit requests. My friend knew this would happen because that is how SGC treated him. Another owner has sent product back to SGC for repair and had it returned still not functioning. Yet another threw their PowerTalk out, taking the loss and purchased an ICOM.

The sentiment among the marine HF radio community is that the SGC is a mistake and ICOM is the way to go. I have to admit, at this point I'm prepared to eat the loss on my SGC and replace it with an ICOM. My personal experience with ICOM customer service is that it is outstanding. Worthy of kudos in major marine magazines. SGC has earned just the opposite reputation. Both for the unreliability of the product and the poor customer service.

A voice in a crowd may be missed, but the crowd will be heard.

748. FT-840 RFI problems

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-08 00:00:00 UTC
From: Cal Kutemeier <ckuter@ix.netcom.com>
Message-ID: <79lan3$ebt@sjx-ixn9.ix.netcom.com>
Source record: 117462

I am having a problem and would like some help with how to go about fixing it. I have a 6 month old Yaesu FT-840 and on Saturday I began to get poor RST's on CW on 15 and 40 meters. I was in a mobile at rest setup and my antennas were hamstick monobanders on my mag mount.

The signal reports I got were 585, no tone, a buzz and the operator not being able to center on my freq. I was on 10 meters voice and had no problems on Saturday, but on a local net on Sunday, I was told that I had some distortion at the start of the transmission. During the TX, the distortion went away but the audio level dropped.

Later sunday I was talking with someone from CA and the distortion went away when I lowered the power from 100 watts to about 50 watts. Must be some kind of RFI in the setup, but it only recently began. I have been running the same config since August.

Any help in pointing me to some resources will be appreciated. I hope this can be fixed without sending it away for repairs.

750. FS or Trade Ken TS530S Station

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-08 00:00:00 UTC
From: Roger <kb1zj@world.std.com>
Message-ID: <36BE2EC6.66433B50@world.std.com>
Source record: 117464

I have a TS530s in good condition. An 8.5 on a 1-10 scale.
Comes with the MC50 mic and MFJ 969 deluxe versa tuner 2.

530: Has warc bands, 12BY7 driver and a new set of 6146 finals.
Has the cw filter and manual.
Also a set of 6146Ws come along. I'm not sure of the condition
of these tubes, other than they look new. Mic looks and works
good.

Tuner: This tuner has the roller inductor and will tune just about
any antenna. It has a 300 watt dummy load and cross needle meter.
Works and looks good. Its only about 8 months old but I put a few
scratches on the top. They might rub out.

I want 500 plus shipping for all or 400 without the tuner. If you want
just the tuner, its 110 + shipping.
I am open to trades for Drake equipment or an hf amp.

Thanks for reading!

I'm a owner of the ICOM PCR-1000.

So everybody tells that the sensitivity is so good on the PCR-1000 !

The sensitivity at 144 to 146 Mhz is not so good as I expect !

It is measured at 12dB SINAD and at 144Mhz 0.32 ?V.
My Kenwood portable TH-22 is also measured by 12dB SINAD
and at 144mhz 0.16 ?V or less sensitiv.

So who nows haw I can improve the sensitivity of my PCR-1000 ?

All information is welcome !!!!

Thanks to all.

Regards

Geert Pirens

754. Sensitivity VX-5R

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-08 00:00:00 UTC
From: lbathe@sginet.com
Message-ID: <79ludk$96j$1@nnrp1.dejanews.com>
Source record: 117468

Unless I am missing it, the manual doesn't seem to give sensitivity statistics for the frequencies 108-174 MHZ; 222-470 MHZ;and 729-999 MHZ. Does anyone know what they are? I've read a couple postings indicating that the military air- band and frequencies above the 800 MHZ band was deaf. I'm in an area where I can't pick up the military air-band and there isn't any 800 MHZ activity, so I can't really check out my radio. Just curious. Thanks....

Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.swap,alt.music-lover.audiophile.hardware

Hi folks :) I'm an electronic musician *seriously* looking for the following musical equipment, in any condition, even broken:

-OLD SYNTHESIZERS from the 60's-80's Moog, ARP, Oberheim, etc

-OLD KEYBOARDS w/ knobs or sliders Roland, Korg, Sequential, etc

-OLD DRUM MACHINES w/ terribly electronic sounds :)

-OLD SEQUENCERs w/ knobs for each step

-OLD VOCODERs for that "robot-voice" sound

-MODULAR PATCHABLE SYNTHESIZER GEAR, complete systems or individual modules - "Switched on Bach Moog", ARP 2600, Paia, anything similar.

-RACK SYNTHS, INTERESTING EFFECTS and anything related to the above.

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML, Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion, Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline

-Roland TR-909 Drum Machine

Ok, so you've taken you cheap shot at "cheep consumer electronics".
But what GPS would *you* trust your life to? I haven't seen you
pointing out anything better.

And how much does this better GPS cost? Are you really sure it's
more reliable than having two independent "cheep" GPSes?

Dave

Hello all,

I'm looking at the Yaesu FT-8100R (2m/440) as a possible purchase - income tax return time ya know.. Does anyone have any experience/pro's/con's or alternative units with same or similar features? Would appreciate any inputs. Or if anyone has one they wish to part with, let me know..

I have a Yaesu FT2500M 2 meter mobile which I love because it has the cleanest receive and very well built to mil spec's!! Best intermod rejection of any 2 meter radio that I know.

I now wish to get a dual band mobile. Of all the dual band mobile radio's out there, which radio has the cleanest receive, ability to be 'moded' on both VHF and UHF, built to mil spec and not cost an arm and a leg?? --Greg--73's N0FKI

Look at the Antennex website, they have a series of projects using upvc plumbing fittings and pipe for a lattice mast, up to IIRC 20 feet or so and costing approx 10 dollars per 10" section.. I dont have the URL but it should be easy enough too find them with a search engine..

You could build an A frame mast.

20 ft would be quite easy to manage, although I am not sure about the 3 element beam. Do you mean VHF or HF?

Let me see....(mumble mumble)...you would need perhaps seven 8 ft 2x4. Pressure treated wood is more durable, but heavier. Five of them would go together like this:

I
I I
I I

Put a 1 foot overlap at each section and you will get a height of 21 ft.

The remaining 2x4s are to be used for cross pieces, two at the bottom (each side) and one at the level of each joint.

Drill holes at appropriate places and install 5/16 inch bolts. And don't forget eyebolts for the guy ropes.

from what I'm seeing for prices for the TS 430S that's a better good deal as along as the rig is in good shape. Also if you are looking to sell it let me know because
that the rig I have been looking for myself. If your not selling your making a wise choice on buying this rig. kb9ucn@bytehead.com

To get out of the memory group function I pressed the VFO button and then MEM
button.
Some how my V X-5 got locked up and displayed an "OUT OF RANGE" error message.
The only way I could get out of it was to do a Set Mode reset.

For what its worth, Radio Shack's Speaker Mic for the HTX-202, appears to work well with the IC-T8.

There is a Yaesu adapter sold by Amateur Electronics Supply, to convert the antenna connector to BNC. Unfortunately, it is expensive.

Actually for very similar reasons, I don't think that there is a single "worst". There usually is an application for any of them, just like for AOL CD's. Most people use them as a cheap clay pigeon substitute, but some use the service and are happy. OK, so what that they are happy because they don't know any better... they are happy and that's the most important part of it.
Yep, really, you are spoiling our fun telling us that what we use isn't very best and state of the art. That's not nice at all.
Now, here , apologise you... you... bad boy!!! ROTFL

It's legal for hams - there is a band at (as I recall) 10.3 to 10.5 GHZ.
It's doable with a moderate amount of technical skill.
A large part of the equipment used on 10ghz is transceivers called
"gunnplexers", many taken from radar alarms/door openers.
Both QST and 73 have regular contributors to this area.

>
> - Clint Bradford

What you wrote was false and misleading. You got a service patch
for a piece of software that did not work. You did not get "free
upgrade".

Let me put it terms that even you might be able to understand.
You buy a new 1998 Ford the motor quits, Ford under waranty replaces
the ignition module. The car now works properly.

Did you get a new car?
Did you get a 1999 model?
Did you end up with a car that had more options?
All those things are upgrades what you really got was a warranty
repair to make what you bought work properly.

Your pigheaded insistance that you got a free upgrade only leads
people to be disapointed and pissed off at RT Systems because they
ain't gonna get no stinken free upgtrade.

Ignorance can be fixed, stupid is forever.

Hi Derf,

I have had a FT-8100R for about 5 months now and don't have any complaints. I run it remote with the radio mounted under the passenger seat and the face plate mounted on the center console of my Explorer.

It gets less pager and grunge interference than my old two meter rig which surprises me because of the broad band receiver.

February 9, 1999

Dear RX-320 User,

Last fall I acquired one of the new Ten-Tec RX-320 receivers. It is really a delight to use and listen to.

After a few weeks, it occurred to me that the supplied software did not fully use all the functionality of the radio. I wondered what else could be done.

So, I wrote my own software. It is not as pretty as Ten-Tec's but it does have some additional features:

- Squelch (adjustable)
- Scanning of lists (files) with adjustable delay
- Tuning in a variety of steps from 1 Hz to 1 Mhz
- 34 selectivity settings
- Runs under DOS or Windows - even works on a 80386 computer using DOS

The program has only been run by me (on several computers), so that really makes it a Beta version.

I would be happy to supply free of charge this Beta version to anyone interested who has an RX-320. The software will not function without an RX-320.

The program is supplied along with several other files in a single zip file. Installation and removal are simple, as the program does not affect any system settings either in DOS or windows.

The program is easy to use - just press various keys to engage the different functions.

Brief installation, removal, and operating instructions are included.

If there is enough interest, the Beta version may advance into a final version. In any event, I am not aware of any major bugs in the program.

Send your request to my e-mail at mktg@ix.netcom.com and I will send you the zip file by return e-mail.

Regards,

David

I've had mine for about a year. It's a very nice radio. The only complaint that I have (and this is common to many mobile rigs) is that you can't enter the frequencies from the microphone keypad. I think you can with some of the ICOMS For a radio with such a wide receive range this would be a very handy feature.

From: kd5gch@usa.net.NOSPAM
Message-ID: <yVOv2.6411$OS5.7040351@news3.mia>
Source record: 117271

For Sale:

Drake TR-4 Transceiver + AC-4 Power Supply + MS-4 Speaker

Comes with original manual, and cables.

Very good cosmetic condition -- this rig is older than me.
Top of TR-4 case has scuff marks in the paint and two small
dents from the feet of the MS-4/AC-4 that rests on top of it.

Front panel on TR-4 is in excellent condition, and all knobs
work and are present.

Powers up fine, all tubes light up. I have not tested the
tx/rx abilities, and I am sure it needs to be aligned and such.
Because it is so old, and I have no way of knowing how well it
works, the units are sold as is.

$275 + you pay shipping from Baton Rouge, LA 70808
(I will ship it any way you like, as long as you cover shipping costs)
Will ship same day money order is received, or wait 5 days for your
personal check to clear.

To be sold as one package, I would rather not separate the units.

Email if interested.

I have 1--100 watt commercial Motorola base/mobile amp that runs on 12VDC and takes 1 watt in and 100+ out. Will take $200.00 or a military antenna kit AS2236 set. (Fair Radio has them)

email Steve -- duece6x6@aol.com

827. Re: ADMS Software

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-09 00:00:00 UTC
From: Bill Smith <bs@BSartist.com>
Message-ID: <79of1v$3oj@bgtnsc01.worldnet.att.net>
Source record: 117274

Hmmm.. Free upgrade? I called them and they sold me the upgrade for $20. It came with a cable that I don't need. I got the upgrade for travelplus import and I have to tell you, it really barely works and is pretty substandard. It was so bad that I thought I got an alpha version by mistake. I Emailed them twice and they never responded. I feel like a fool.

Below are excerpts from a description of what I found with ADMS-1C V2.0. Some of the things I was able to get working after hacking around for awhile. These were very non-intuitive and make the product frustrating. But for brevity, I won't include those. I'll include the things I never got a resolution to...

---

1) There is no reference to the import facility in the help file.
2) I try to use the Import function on the simple TPE file below and I have the following problems:

b) The "Definitions" column also matches up a handful of columns. I don't know where it is getting this mapping from but it looks suspiciously like my first attempt at matching fields. I keep changing it and whenever that screen is invoked, they are reset back to the screwy mapping. I even re-installed.

d) Trying to map fields in the tpe file with memory channel attributes is very problematic at best. OK I was able to get things like "RX freq", Offset and even "name" to map up with some of the fields in the file shown below. But how do I set the proper CTCSS settings? I seem to have found the following: Setting the 114.8 field to Tone sets the memory channel to "CTCSS Tone" but the tone value is not set to it. Setting the 114.8 field to Dec Freq sets the memory channel to "CTCSS Tone Squelch" but the tone value is not set to it. Setting the 114.8 field to Enc Freq sets the memory channel to "CTCSS Tone" and *does* set the tone value to it. But how do I set CTCSS Tone Squelch and also populate the value?

e) When I do finally get some fields mapped and I get the second screen that lets me select which entries to finally import, the column headings "RX Freq" "Tone" "Name" "Location" bear little resemblance to reality. I.e. nothing seems to line up. Offset ("-") is under tone, "114.8" is under Name, Comment ("Chappaqua") is sort of under location (where did "Location" come from anyway??) but indented to the right. When I do import, these things do end up in the right locations inthe memory channel but I can't understand why this display bears no resemblance to reality.

g) I happened to notice when I tried a simple export to a csv file from ADMS, the power column was not exported properly (they were all set to H).

Did you know that there is a $2 tax on your phone line for E-Rate courtesy of Clinton/Gore. Did you know that there is a $5 monthly tax on ISDN lines courtesy the same pair. Did you know that there are about 100 million household phonelines in the US, but somehow all this money collected hasn't made its way down to the schools who were supposed to be wired to the internet?

Clinton is only responsible for taxing the internet.

Alright! Thanks... that was actually all I needed to know. I did not have anything on it and I knew the keys because they are BARELY visible, but I wanted to know how to program the USER key. Thanks again.... One other thing is that the audio (TX) seems a little low. Well, I have been told I sound like there are less "highs" in my voice... which I don't mind! :> But I thought I'd get the service/tech manual and see if it can be adjusted. thanks again.....

I AM GULLIBLE. For a while there I was believing that Morse Code was
important for getting a ham license because someone told me so. I guess
this isn't true. Is someone lying to me again?????
Am I naive in thinking that the only true believers are Pro-CW hams?

> Wake up.

As I understand it, of course I may be wrong, the Internet came into
being
c.1967, but not popularized until Clinton/Gore came along. The key word
is
popularized. Did Reagan, Carter, Bush ever mention it to us? Can't
recall.
Re taxes, Which President made this famous quote: "Read my lips, no new
taxes." Another lying Democrat, George Bush.
Poor Ronald Reagan, truly he probably "...didn't remember." I know the
real
estate dealer that tried to sell him back his own home, <G>, Funny thing
how
Oliver North, Annapolis graduate, keen mind, couldn't remember details
of the
Iran-Contra Affair...gosh, don't these national leaders take notes?!?!
How about this Democratic President: "I have a secret plan to end the
war
[Vietnam]." "I am not a crook." Wasn't called *Trickie Dick* for
nothing.
I still remember all those staunch patriotic, America is #1 Republicans
during
the Vietnam War who had a calling from Heaven to become ministers, ala
Stockman (a Reagan adviser I believe). Funny how they all had a change
of heart
when peace was declared.

<SNIP> Clinton is only responsible for taxing the internet.

I must have fallen asleep in my Civics/U.S. History class in college.
Please forgive my ignorance. I didn't know only Presidents from the
Democratic Party imposed taxes on us. I'm so dumb, next time I'll have
to
vote for Reublicans who only believe in "revenue enhancement." You know,
Ronald Reagan was right, why have national parks and forests, you've
seen
one tree, you've seen them all. You should've seen his ranch in Santa
Barbara County, California--all those plastic trees on his acreage.

844. Re: MFJ 259 SWR analyser failure

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-09 00:00:00 UTC
From: Paul Van den Hende <paul.vandenhende@ping.be>
Message-ID: <79p6fq$8f3$1@news3.Belgium.EU.net>
Source record: 117291

Hello !

Thanks for reading this message. Three years ago, i bought the MFJ 259 analyser in the U.S.A. I used it only a couple of times. I took care for it as "eggs".....
Some time ago i once again i would make some measurements.....it failed !
I made an e-mail to MFJ, but no reply....

The counter is ok.

It looks like the oscillator doesn't run anymore......

A friend of mine said that it was the rotary switch wich made bad contact after a year in the box....

Anybody can tell me if there is a known cause for this, or where i have to look...A schematic would be helpfull, but i never managed to get one....

Best regards !

paul.vandenhende@ping.be

Maybe a litle bit of topic but..

Dear Friends,

I like to set up a sked on HF with station in Nicaragua this saturday. My daugther (14) has some questions for you. In the school they learn about South America, and the group of my daugther learns about Nicaragua. They find material in books, the internet , but also like to come closer to the informations. Please help these youngsters to a good felling of international coorporation - and the spirit of Ham-radio. Send me an e-mail for the sked. FJ@SNI.DK

848. Storno Power Supplies

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-09 00:00:00 UTC
From: Dave Lempriere <lempriere@porthill.com>
Message-ID: <79p9df$h3a$1@news1.cableinet.co.uk>
Source record: 117295

The South Wilts Repeater Group are looking to obtain 3off PS604 12volt power supplies for our Storno 600 series repeaters. The reason being that our `mains power' (240 volt) will, through no fault of our own, be cut off within the next 2 months, and we therfore will be going to a hybred system of solar and wind power generation. So to keep our existing repeater, (GB3SW on 70cms. and soon to be on the air GB3SQ 2mtr.) running we require PS604 12 volt power supplies. The third supply is for a repeater used by the ATC cadets.

If you or somebody you know could help us please Email me at lempriere@porthill.com or swrg@bracher.telinco.co.uk thankyou

Jeez. Their US web site goes down, and they're proclaimed to be bankrupt?
Where did you get your information? I'm no big fan of Yaesu, but I doubt
that they went bankrupt overnight.

The main web site in Japan is alive and well.

Yep, Lowrance has it, AFAIK Magellan also does. Do you really think that if Garmin would be the only company to have that feature, it would make them a leader? C'mon a leader should be something grander... than may be not... ouch I almost went off topic... ;-))
In any case, for me a is the one who establishes trends. There is a number of small features which are unique to each brand of GPS receivers, but I can't see any of the "big 3" to be a leader.

If you meant price I bite;
AFAIK
the cheapest to be have is Magellan,
in mid-price it's a stand-off,
new wave, CD uploadable GM100 / MGP is significantly less than G3+ and
Magellan is (going to be?) even less expensive?
the most expensive, popularly discussed here is Street Pilot

Now, if you meant anything else than price, I won't bite - I can't afford a
bodyguard ;-))

Shush don't tell Clint he will tell you that these problems
are all due to your inability to communicate properly. I
originally took issue on this subject because Clint and
others claimed to have gotten "free upgrades" when what
they got were service patches to repair a piece of software
that didn't work. Thanks for the report on the integrator
software it isn't really too much of a loss though as bad
as the ARRL repeater directory is. I develop information
for the various cities I travel to and have a number of
files for them. The best way to go would be to establish
a web site where people could leave their files and pick
up others. Perhaps the VX-1 unofficial web site could do
this.

Sure looked like they were in full operation when I was there yesterday.

Talked to the national amateur sales guy and lot 3 of the VX-5's are already sold out and they'r waiting for lot 4 to arrive by plane. Can't keep them in stock. Apparently they'v fixed the bugs w/ the earlier ones. That means I get mine next week. :-)

As for the aligation of closing the doors...pure lies by the anti-yaesuest out there. If anyone was going to do it, it would be Deadwood, oh, sorry I mean Kenwood.

you would have no need for a body guard with me...Greg maybe, but
certinly not me.....

Garmin is in the same line as Magellan...cheep consumer electronics, you
don't want to trust your life to a garmin handhelp GPS.

For play, no problem.

Actually, the President doesn't impose taxes. Congress does.

Not only does Clinton have nothing to do with this thread but these
cross posts are out of context as well.

If you are waiting for either Republicans or Democrats to save the
world, you might as well jump off a cliff today. Since most people
can't help but to look out for their own interests, one can only
expect politics to become an arena for self-serving corruption. Those
who have not taken this road as they walk amongst the devils deserve
all the more praise for their strong character and firm principles.

Hi Andy,

Well, I didn't know that. My *selection* of receivers is limited to whatever E&B Discount Marine has in stock at any given time ! And I have to drive about 45 minutes just to get there. Well, alright then. But I don't think, as someone else mentioned, that Garmin is a toy (cheep (sic) crap) I think was the quote. He said he wouldn't trust his life to a Garmin. Well, I wouldn't trust my life to _any_ gps receiver ! DUH

My experience with Garmin is tainted by the battery failure I experienced with the gIII. But this drove home a very important lesson. ANY unit can fail, and at ANY TIME. That's why I use the gps as a navaid and nothing more.

I think if you took some kind of a survey, you would find there are people in *mission critical* situations using all brands of receivers. Someone at the north pole. Someone in Antarctica. Someone flying an airplane, sailing a ship, using it for SAR, and etcetera. It has never been _proven_ to me that any one brand is more reliable than another.

Does anyone have empirical data to support the allegation that any one Brand of gps receiver is more *reliable* than another?

****

I have both the ICOM 207H (dual bander) and the Kenwood TM 261. Both perform without problems. The Kenwood gives you an alpha display which can be helpful. The QST eval. indicated overheating under some conditions but you would have to be pretty abusive to reach that point. Satisfied with either radio.

Well, the sheet of paper that came with this really only talked about how to set the user key up for anything you wanted so here are the keys and how to program the user key.

Call----VFO---MR----USER

FUNTION IS THE LIGHT KEY

To use the user key which is set to the BAND key by default, hold the USER key down, the last key, while turning on the radio with the mic power button. You should have the word user on the radio itself and the next key you press on the radio is what the USER KEY becomes. So if you would rather it be reverse, press reverse and so on. Have fun, Scott Hilton, n0oba

You are quite right to be suspicious. What they do not tell you is
that common mode filters won't do much if you are suffering simple
overload. That's the problem that I have. In my case, I have hi pass
filters in the TV cable and LP filters at the rig - no help at all.
Moving the antenna 100 ft from the house works wonders. I suppose that
in cases of simple overload, that there are circuit modifications and
shielding techniques that can be applied to the TV itself that will
help the problem

885. Re: SGC radio - Run! Run Screaming

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-09 00:00:00 UTC
From: nrs019@aol.com
Message-ID: <19990208210140.14145.00000167@ngol03.aol.com>
Source record: 117364

Gary,

I really didn't intend to start a fight among newsgroup participants. I understand that you and people you know have had good experiences with SGC both the equipment and the service. And I admin I do not have the breadth of experience to adequately assess percentages of failure.

I started all this because I couldn't get a response at all from SGC. I wasn't allowed to talk to customer support, nor was I allowed to talk to any member of management. I was at a dead end, and rallying a group was my only hope of provoking a response from SGC. You are probably accurate in labeling me a 'sorehead', but I really didn't start out dealing with SGC with that attitude. In fact, the first two times I had interaction with SGC it was with a representative who was helpful and friendly.

I do have to address a couple of items. The truth is that I have run technology companies with a high rate of customer interaction, and I or any other member of senior management would and will drop everything to talk to an irate customer. I consider it to be very important. My well paid engineers also talk to the customers. I believe I am the very example of why it's so important. I would never have risen (or sunk) to this level of 'soreheadedness' if someone, anyone had been willing to talk to me, or even return my telephone call. I believe it to be fundamental that the customer is never unreasonable. The minute you start thinking of your customers as unreasonable, you start losing customers and that's far more costly than satisfiying them up front.

This really isn't similar to complaining to the president of GM when your car breaks down. I wasn't interested in talking to the president at first. That's why companies have Customer Service organizations and managers. Unfortunately I didn't have access to that organization, so I just kept going up. And I don't believe that when the dust settles, I'll be looking unreasonable. Radio is not a hobby for me. I depend upon my SSB as a vital piece of safety gear aboard my boat. It is very important that I believe in the reliability of the radio and the availability of the service. It's very hard to believe, however, if the people who support the equipment won't talk about it. At the very least, there should be a statement of work included with the product when it is returned. There was none.

I have subsequently talked to Pierre Goral, the president of SGC. I found it interesting that he identified the 'secretary' as the Customer Service manager. When I had asked her to let me talk to the Customer Service manager (surely that's not unreasonable) she told me 'he' was not available. Pierre also told me that the techs are 'always' available to talk to the customer about service and support. I had already been told by the 'secretary' that they never talk to the customer. While this could be a miscommunication issue, it sure sounds

and smells like an honesty issue. I should make it clear that the employee I had been talking to is also not the issue. This is more of a corporate culture problem and that only can come from the top.

As far as reputation, again my breadth of experience is too narrow. I have only encountered about 25 SGC owners in the Mexico cruising (boat) community. However, none of them are happy and all of them have had to send their rigs back to the factory for service. Often more than once. I was the last one. This is especially problematic when trying to ship expensive electronics out of and into Mexico. With the exception of the occasional SEA, the rest of the radios in the fleet seem to be ICOM. In contrast with SGC, I have only heard of one ICOM requiring factory service. Of course, that one needed it more than once.

Again, I didn't mean to start a fight (well, at least not with the members of the newsgroups). I just want a dialog with the company from whom I buy expensive product.

896. Re: Radio Install--Jeep Wrangler

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-10 00:00:00 UTC
From: Wink <wink@rpa.net>
Message-ID: <36C16232.8947313B@rpa.net>
Source record: 117175

I have a Jeep Wrangler that I've installed my 2 meter radio in the console between the front seats. I use an external speaker and I just open the top of the console for access to the radio. I was concerned about heat buildup so I also installed a small muffin fan in the console but it doesn't seem to be a problem. My Jeep is a soft top so security is a problem. This way I can just lock it up and it's out of sight. It works for me...

897. MIL-SPEC Dual Band Radio

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-10 00:00:00 UTC
From: "Joel B. Black" <jbblack@mindspring.com>
Message-ID: <79rt03$4kc$1@camel29.mindspring.com>
Source record: 117176

I am interested to know if there is a MIL-SPEC true (not one band at a time) dual-band (2m / 70cm) mobile radio out there. My job as a telecom electrician takes me into some rough places and the vibration, I think, killed my last radio which was an iCOM IC-2000 (iCOM really stands for I Can Only Monitor in this case) ;-)

Please respond to my e-mail address as I don't frequent this list.

Thanks in advance.

902. FS: Maha VHF HT Docking Booster

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-10 00:00:00 UTC
From: tracy585@aol.com
Message-ID: <19990210091329.10511.00000034@ng04.aol.com>
Source record: 117181

For Sale or Trade: MH-A301 VHF Docking Booster

"Maha's new Docking Booster are the affordable solution to the weak signal problems. The MH-A300 series docking boosters utilizes a compact amplifier, and with the appropriate adapter, you will boost your five watt output power of you handheld to higher output power of a more expensive mobile radio while maintaining the portability of the handheld. All you have to do is dock your radio, and you are on! Just slide the radio onto the booster as you slide your radio onto your battery pack. It is that easy! You can instantly switch from a powerful mobile radio to a portable handheld with ease! Put you radio on Maha's new MH-A300 series docking booster and see what it can do for you!" Says Maha at their website the world wide web at www.maha-com.

MH-A301 Docking Booster Specifications

MH-A301
Nominal frequency range: 144-148MHz
Mode: F3 (FM)
RF Input power: 1 - 5 Watts
RF Output with 5 watts Input: 50 Watts (MAX)
Receiver Gain: 14 dB
RF Input/Output impedance: 50 Ohms
RF Output connectors: Type M (SO-238)
RF Input cable & connector: 50 Ohm coax with BNC male
DC Input voltage (nominal): 13.8 Volts
DC Current drain: 8 Amps. (MAX)
Dimensions: 3.3"(W) x 5.9"(H) x 3.3"(D)
(85 mm) x (150mm) x (85mm)

Weight: 1 1/2 Lbs (0.7kg) Approx.

FEATURES

Simple to connect to your handheld, just remove the battery and antenna from your handheld and attached it to the appropriate adapter mounted into the unit and connect the coax cable of the unit to the antenna connector of the handheld.

50 watts nominal RF output power with 5 watts of input RF drive power.

Low noise GaAs FET Receiver Pre-amplifier.

The DC power is supplied from the unit to the handheld through the battery adapter.

Reverse DC power polarity protection.

If interested mine is for sale or trade. It's one year old. Excellent condition. Make offer ($100?) or trade for VHF mobile radio of some kind? Please respond to the e-mail address listed on this posting.

Thanks!

73

Tracy
K0DOE

BUT WILL IT FIT MY RADIO YOU SAY???

Docking Adapters this booster is compatible with--

Adapter Model Compatible Radios
MHS-K1 Kenwood TH-77 Series
MHS-K2 Kenwood TH-79/22/42
MHS-Y1 Yaesu FT-470/415/23R/411E/811E
MHS-Y2 Yaesu FT-530 Series
MHS-Y3 Yaesu FT-11/41/51R
MHS-Y4 Yaesu FT-10/40/50R
MHS-S1 Standard C158/228/558 ADI AT-200/400/600
Radio Shack HTX-204
MHS-I1 ICom IC-02AT/03AT/H16
Radio Shack HTX-202/404
MHS-I2 ICom IC-2SAT/3SAT/4SAT/W2A/24AT
MHS-I3 ICom IC-W21AT/IC-2GXAT Series IC-M10/F10/F20
MHS-I4 ICom IC-Z1A/T7A/T22/W31/W32

...And will need to be purchased from Maha separately for your specific radio model. They also provide a universal "cup" which can be adapted to fit most non-standard models listed above.

I think that 600W should help you get above the noise some when needed.
1 S unit or so to really state the difference. In many occasion, this
little bit head room buys some time to finish up the QSO which is in
progress.

Hi! Is it relatively painless to install a PL board in a Midland 13-509? I have a ComSpec board that I would like to put it. I'm lacking docs, so any info would be helpful.

Are there any other upgrades of interest with this rig? I found an old article in "73 Magazine" about improving the squelch performance, but that's it. Has anyone ever changed out the finals to get more than 10W out (like is commonly done with the HR-2510/2600)?

Thanks for any help -

Paul WD8DKY

913. Memory groups on VX-5R???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-10 00:00:00 UTC
From: Vito Villamor <vovillamor@earthlink.net>
Message-ID: <36C1B85F.3C70B7DD@earthlink.net>
Source record: 117192

I've been hearing that the VX-5R can access any memory location
without having to switch bands like you have to do with the VX-1R.

My real question is whether or not the VX-5R can put memory
locations into a group(s), and then just scan memories in that group.
We do thison the VX-1R by using the radio's frequency bands to group
the memories,and then use the ADMS software to put the memories into
the specificfrequency band that we want. Is the VX-5R able to do
something like this?

In some of the newsgroup postings regarding the VX-5R some people
have made references to "memory groups". Does anyone know any more
aboutwhat they're talking about? I would have just contacted the
author of the post, but my newsgroup server has already deleted
the posting.

I don't have a VX-5R yet, but I do have a VX-1R. I'm just getting
some information about the VX-5R now so that I won't have as many
questions about it when I finally get it.

Thanks in advance to those that respond,
---Vito

By the way--have you people read the posting about Yaesu going
bankrupt? I wonder if the author was trying to be funny, or
if he jumps to conclusions like that everyday...or maybe just a
disgruntled Yeasu critic...

We're talking apples and oranges here, Mr Hackman. There are a lot of *survey grade* gps receivers available from a lot of manufacturers, and you can have any of them if you want to spend the money. But these are not the kind of receivers you're going to drop in your pocket for a whitewater trip down the local river.

And for anyone willing to spend a *little* more money, they can add DGPS to their *cheepie* receiver and get PDGA (pretty damn good accuracy) for a _lot_ less money than you are suggesting.

For serious scientific use, survey use, perhaps one of your suggested receivers might be more appropriate than the little 12XL brick I drop in my pocket when meandering about. But I don't think most of us need the centimeter accuracy these more expensive units are capable of; we definitely would not find them convenient to carry about, and most all of us could not afford them.

I suggest that you visit the Trimble site www.trimble.com for a review of how a modestly priced dgps receiver can add great precision to the cheepie receivers most of us use.

What you HAVE NOT done is take into account the cost/benefit/convenience factors. Of course a billion dollar oil conglomerate can afford to use, and will use, 30,000 dollar gps receivers for determining coordinates for drilling. The question is, DO YOU CARRY ONE OF THESE YOURSELF FOR YOUR PERSONAL NAVIGATION PURPOSES?

The Al1200 is a great amp that will put out gobs of power, but is very NOISY - lots of fan noise. The TL922 is a good quiet amp and can easily put out 1200 watts on ssb. It is a great looking amp also. I have owned a AL80B for about four years now. I am very happy with it. It is very quiet and can put out 1000 watts ssb no problem with the single 3-500Z on 120 volts in a nice compact desktop package. Sometimes I see them go used for around $775. I stayed away from the AL811 series - they work well, but I talked to a lot of owners who had replaced their tubes after a couple of years. Good luck in getting yourself an amplifier. --- Steve KK9ZZ
Fausto Casini wrote in message <79rt61$9gu$1@fe2.cs.interbusiness.it>...
Hello', I am thinking about to buy a linear amplifier to let my FT1000MP (and me) to be happy. Now the question is: is it better a new Ameritron AL811X 600W ampli or, for the same price, a used ampli like TL922, Drake L7, Ameritron AL1200 (in good conditions)??
Supposing to have a good antenna, like Cushcraft X7 or KLM KT34XA, could I use the small (and new) one, 600W, to get good results in DX?Thank for help...73...Fausto

Source record: 117196

My guess is you have a ground problem. With a mag-mount you need to connect the trunk (assuming that's where you have the mag-mount) to the body of the car through a heavy copper strap or braid. Also check the ground connection on the rig...if you are only using the negative power lead it may not be a good-enough connection. I have run the 840 on a Chevy Corsica with mag-mount on the trunk and hamsticks with no problems--though I never ran CW mobile.

I would be very surprised if there were anything wrong with the radio.

>If you really are intered in this data, Id be glad to dig it up.
>How much more reliable ? Well, in testing our North Star equiped as a
>servey unit would track to within a few centimeters.....used to place
>drill heads etc.

When you said "I wouldn't trust my life to a Garmin", I thought you were talking about "reliability" in the sense of unlikelihood of failure to provide a position within the expected accuracy - which is +- 100 m 95 percent of the time with decent satellite geometry for a handheld.

Now you seem to be talking about reliability in providing a cm-accuracy position. Of course, no consumer handheld will ever provide that accuracy in the first place - you need a survey-grade instrument.

Let me rephrase the question: If you were going out into the wilderness somewhere without map and compass, and depended on a GPS to get you home safely, and the accuracy provided by an SA-degraded GPS was sufficient for this purpose, which would you take with you into the wilderness: one North Star survey unit, or several consumer handhelds? Which option is least likely to fail completely?

Dave

Hi Mr. Hackman,
I believe you are mixing apples and oranges here without benefit of a sauce. Surely we all agree that a $300 GPS receiver of whatever brand is potentially not as accurate as a $10,000 surveying instrument. I would suggest that in MANY cases, the surveying instrument would be totally unsuitable for uses to which the $300 units are put.

When you attempt to qualify one instrument as "better" or "more reliable" or "more accurate" or whatever, you must state and be able to support your criteria. (That is if you are SERIOUS about such statements.)

So... Yes. I believe there are more reliable, more accurate, more robust, GPS receivers than Magellan, Garmin, Lowrance and similar consumer units. HOWEVER.. If I am not able to quantify these beliefs, I am not able to make categorical statements about these areas.

For instance:

Do you know the manufacturer's rated MTBF for each of the receivers you are comparing as one being more reliable than the other?

Do you know the actual field measured MTBF for each (or any) of the receivers you are comparing as being more reliable than another?

Some suggest that (for instance) Garmin receivers have more failures than <say> Lowrance receivers. They say that they are basing their statements on the fact that you read more about Garmin failures on the newsgroup than Lowrance. Could this be because Garmin receivers are more popular with consumer and that as a result they sell many fold more units than some other brands? Without good statistics, I cannot say for sure. Can you?

If you have *REAL DATA* Please! Lets have it! I am very interested in this area, but without *real data* we do not have any basis for comparison or even intelligent discussion of comparative reliability.

Thanks

Joe Mehaffey

Date: 1999-02-10 00:00:00 UTC
From: nworbekim@my-dejanews.com
Message-ID: <79ssjk$8cb$1@nnrp1.dejanews.com>
Source record: 117207

I have a Midland 13-513 220 mhz FM rig that looks nearly brand new. 220 here is not being used at all by anyone, so I thought I might turn it into something that is....

Any interest?

929. Re: which linear..new or used??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-10 00:00:00 UTC
From: Bill Clarke <w2blc599@bigfoot.com>
Message-ID: <#0rg5EUV#GA.229@upnetnews02.moswest.msn.net>
Source record: 117208

I have had an AL-80A for over ten years. Still on the first tube and it sees about 4 hours of use daily - mostly on 75 meters. It is quiet and they can be found for $500. The only glitch is the in-rush relay. I had to replace it with a heavier unit.

At the receiving end there will be no difference between what the 3-500 does or four 811As. You will notice the difference if you have to replace the tube though. 3-500s are expensive and 811As are cheap, of course you need four of them!

Both amps are good medium power units and represent reasonable cost for the watt.

ALSO - there is only 3db difference between what the AL-80A or B or the AL-811H can do and what a legal limit (1500 watt) amp can do. You will pay mightily for that extra 3db, which may well not be noticed at the receiving end. To put it into perspective, going from the 800-1000 watt range to the legal limit is about same, or slightly less, as jumping all the way from 100 to 200 watts.

Of course there are loads of amps than can do much more than legal limit - and they are used well above that level on a regular basis. Why do you think those high dollar amps sell so well? Reliability? I doubt it!

The AL series of amps are very reliable and so affordable that you could keep an extra one around for back-up and still spend far less than an Alpha would cost. AND YOUR SIGNAL WILL BE NO BETTER WITH THE ALPHA!

Want to hear the real kicker? The ham running an illegal 2500 watts is less than 3 db louder at the receiving end than the ham running full legal power. The receiving station will NEVER notice the difference. Once again, the jump from 1500 to 3000 watts is about the same as the jump from 100 to 200 watts.

Source record: 117215

When I forst got my 8100R, I loved it, then it had some things go bad like a mike, and a squach and Volume cntrl knobs. and the Mic was hard to umplug. I think that was because it was new on the market. They repaired it under wartty, and I think they got all the kinks out now, At least I have had not had any trouble with it for a while. I did learn though, in almost, not quit, but almost anything that is brand spanking new on the market has Problems. I would wait for a mounth or two maybe even 3 to 6 months before purching any thing new to the market.

The above link will take you to an ebay auction. This is a ku feedhorn
from an old
vsat site. This is a very nice and very very heavy duty feed. This
setup comes with
a transmit reject filter. And of course this filter can be removed and
used with any
ku waveguide. A great piece for the price.

Hello Nick, IIRC the standard TNC-2 binary code (in Intel-hex
format, I think) is available from TAPR's web site; I don't have
the URL to hand at present but any decent web searcher should
find it. I downloaded version 1.1.8a in the middle of last year
and blew a new EPROM to fit in my PK-80; works fine. I believe
the aforementioned is the latest version but I could be wrong.

Good luck

I have a kenwood TS-440AT which is having problems. I posted this message last month and got some good responses, then my computer crashed, so I am posting again.

I turn on the radio, and after a few seconds, my numbers in the frequency disappear. I also lost my volume. I can put in new numbers, but they disappear within seconds. Again, no volume.

Can someone please help or provide some advice.
thanks

943. SMA to BNC adaptor warning

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-10 00:00:00 UTC
From: eric_fre@hotmail.com
Message-ID: <79qo1pbvc1@nnrp1.dejanews.com>
Source record: 117239
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner,alt.radio.scanner

I often hear people looking for the SMA to BNC or PL259 adaptors. A word of warning especially with the little handy talkies puting a big adaptor with a thick cable on a tiny SMA puts a hell of a lot of mechnical stress on parts. By far the easiest and neatest (not to mention cheapest) solution is to get an SMA connector on a piece of the thin teflon coax, about 30cm with a BNC male on the other end made for the thin coax.

Just a sugestion.

When and if it comes out it will cost $20 US plus shipping.
You want to wait until it is available because there is
no such thing as a free upgrade from RT Systems. You will
get the cable as part of the package because that is how
RT sells it and there is no discussion of this policy you
want the software you buy the cable. No matter how some
pundits spew forth that is how it is.

>Also, is their a cellular mod for the VX-5? I know that the FT-50 (older
>models) and the VX-1 were capable, but did Yaesu permenantly fix this?

I was sorely disappointed that Yaesu specs the radio as "800-999Mhz
(cellular blocked)" when the radio skips 864.00-868 and 918-944Mhz
which are NOT cellular and are not ECPA protected.

I'm especially raw that 864-868Mhz SMR systems are not receivable like
on the FT-50 (which respects the real cellular ranges).

What about 902-928 fully open for amateur RX (o.k. ISM & part 15 too)?

Otherwise, luv the radio ;-)

The Icom IC-31 (not W31!) is a crystal-based transceiver for 70 cm. It looks as if it were built in the mid-70ies. That radio should be nice for paked radio, but I need different cristals and perhaps do some maintenance. However, I am lacking any dcoumentation and I couldn't get anything here in DL. It seems as if the IC 31 were not sold in Europe.

Does anyone have a schematic and a manual for that trx and would send my a copy (of course, I'll pay costs) ?

If it were me putting on a bullet proof vest to go to work and I was going to rely on this GPS to find me if I had been shot, I would want a very good GPS unit. I would want mil-spec and no SA. I think a police dept could get that. Sgt in the trunk would not be an issue only because its a job and the Sgt should know what is going on. Maybe the Sgt should not do or say anything about speed or too much time at one location etc.. It is the excesses that matter and a good Sgt should know that!

It is too bad that a salesman has to lie in order to sell you something that you think you want. Salesmen are people too and subject to the same temptations as drug dealers $$$$$$$. For people like that there is a term called FRAUD!

Again, I would look at what the military is using not what some cab or bus driver is using. The situation that it is needed in is more like battle than a cab or bus ride! Another thing, industry leader means nothing! I do not see MicroSoft software used in critical applications, such as a life support system, becuase they are the industry leader in computer software. You need quality and reliablity not quantity :>) I would consider a proven GPS system for your application. If you know that a major police force is using a certain system, you may want to consider that one too. This doesn't change the equation(quality and reliablity) but it does narrow the search.

Hey that's my $0.02 I hope it helps

not available as a free download. you buy it from a dealer. some people say
it comes with a cloning cable (i don't know...i have not bought it)
price is about $30 i think. you will need to buy a cloning cable if the
cable is not included. it is not a point to point connection you can wire
yourself. it has a complex circuit of diodes for switching built into the
db9 end.

I've built two A-frames, one from 2X4s and the other from 2X3s. The 2X3 version is a whole lot lighter but still plenty strong, and I recommend that approach. I've taken down the 2X3 version because a nearby tree (a giant sequoia) grew to antenna-support size. The 2X4 one is still up after about 15-20 years. Both are about 40 feet tall, and were made from 22-24 foot pieces of lumber. Don't know if you can still get them this long. This construction obviously wouldn't be portable, but might give you some ideas.

Mr. Hackman,
As several have called to your attention:

There are MANY forms that "Industry Leadership" can take. For instance:
1) Sales Leadership
2) Technology Leadership
3) Customer Support Leadership
4) Quality Leadership
5) Reliability Leadership
6) Price Leadership

When you fail to define <in any meaningful way> what YOU mean by industry leadership and THEN give flippant comments when others reply to you, your statements cannot be taken as having much authority. You *may* have something to add about GPS industry leadership. However, to this moment, it is difficult to follow.

What I *think* you are trying to say is:

Garmin's $300 consumer GPS receivers built for modest cost and less than military standard robustness have less accuracy than a sub-centimeter survey grade instrument such as you use which costs in the range of $10,000 to $25,000 dollars.

If this is correct, then we all agree.

If on the other hand, you were suggesting that Garmin (and Lowrance) are NOT in an Industry Leadership position by virtue of producing an excellent and low cost consumer GPS receiver with internal maps for a price in the range of $300+, then most of us would disagree with you.

Lets hear how you use your highly accurate survey grade GPS receiver to place well heads.. Why do they need to be precisely located in the first place?

Thanks

Mr. Hackman,
Then we must all disagree I think with your premises.

Try this:

Garmin (and Lowrance) are the INDUSTRY LEADERS in producing a HIGH TECHNOLOGY, forward looking, ADVANCED, GPS RECEIVER *WHICH INCLUDES USER UPLOADABLE MAPS* in a GPS receiver selling for LESS THAN $400. This is indeed TECHNOLOGY LEADERSHIP in this particular area of GPS technology.

So.. Is this not INDUSTRY LEADERSHIP in THIS SPECIFIC AREA of GPS Technology?

I daresay that you can formulate a statement that we will all agree with wherein YOUR favorite vendor is in a position of INDUSTRY LEADERSHIP.

Joe Mehaffey

The longest I have been able to find at the average lumber yards is 20ft.
I use 2x4s up to 30ft and then a fiberglas pole for the last 20ft.

One suggestion:

While you've got the radio open, and have dismounted the RF board from the metal casting (rear case) anyway, put a bit of heat sink compound between the two RF power modules and the metal casting during reassembly. This will help keep the power modules cool during high-power transmit.

It seems that the radio won't fry the power modules without the heat sink grease, but perhaps the radio achieves this by backing off on output power when the temperature rises (the FT-51 does this). Better heat sinking can't hurt, and cooler is always better for power transistors.

Hi...

Cleaning house a bit here...

I have a like-new (used inside only) Comet CFX-324 TRIPLEXER For Sale.
I used this triplexer with a 3-band (2m, 220, and 440) Kenwood TM-742
Triband Radio in order to hook up all three separate antenna outputs into
one coax feeding a single tri-band antenna (though it can certainly be
used in other ways (eg 3 antenna to 1 radio.) I no longer have the radio
and now have no use for the triplexer. The triplexer is in absolutely perfect
condition, with original Operation Manual, etc. I paid $85 brand new, will
sell for $50, plus $5 shipping.

Thanks...

That's a good idea; I'll probably do that next time I break the rig.
:) Hopefully that won't happen.

989. 7261A Fluke-Need Manual Source

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-11 00:00:00 UTC
From: Conrad Hoffman <crhoff@bestnetpc.com>
Message-ID: <79vg2o$3rv$1@news.iag.net>
Source record: 117034

Hi All,

Does anyone know a source for the manual for a Fluke 7261A Counter?
Iv'e looked in most of the manual places on line.
I know Fluke has them, but their a little pricey.

Thanks,

Conrad W8MHH crhoff@bestnetpc.com

"The SG-504 provides a leveled output amplitude that is variable from 245 to 1050 MHz in two bands. Frequency is indicated on a high resolution tape dial tht expands each band over 28 inches. The accurately calibrated output voltage is variable from 0.5V to at least 4.0 V p-p into 50 ohms." Includes internal 6 MHz or 50 KHz internal calibration source. Unit is designed to work with standard TM500 series power racks. Amplitude is read out on a calibrated vernier dial. This unit includes the hard-to-find leveling power head which feeds back actual power output to maintain constant amplitude across the entire freq range. Very stable freq and amplitude output. Excellent for calibration of high end O'scopes and for receiver tests with an external attenuator. Includes freq monitor out to fine-tune the freq with a digital counter (not included). Has an FM input for FM of the signal or for phase-locking the unit to an external source. Rear-card connections include FM input, frequency monitor output and amplitude control. Original 1988 Tek cost was $4060. Sorry, no manual included. Buyer pays shipping. Shipping weight will be about 8 pounds from 93523 (CA). I will accept prepayment or COD with certified check/money order, or personal check with ample positive feedback. Happy bidding!

992. TS-850/TS-940/TS950SDX Comparisons?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-11 00:00:00 UTC
From: drgrant@ziplink.net
Message-ID: <36c443fb.153331619@news.tiac.net>
Source record: 117037

Has anyone here owned both the TS-850 and the TS950SDX, or
the TS950SD? What makes the 950 better than the 850, aside from the
DSP and the Dual recieve? How about the TS940- I realize this
is an older radio, but how does it fare against the 850/950?

Also, perchance, would anyone know what the duty cycle on either
rig is? I believe the TS-850 is 100% in all modes, but I'm not sure,
it doesn't say in the manual, but I've been told by others that most
kenwoods/icoms are 100%.... It's kind of odd because only Yaesu
seems to publish a duty cycle spec for any of their radios.

Any Input is appreciated. Feel free to send email and/or post.

-Mike

I second the 2x3 recommendation.
Buy some 2x6 and rip them.
Fir is not much more expensive than yellow pine
considering the extra strength. If you are concerned about
engineering, check some wood construction references.

>I am considering purchasing a Kenwood TM-V7 2m/440 rig. Does anyone have any
>experiences (good or bad) with this rig?

Pros:
-Excellent Transmitter (Mine did 60W Bird on 2M.... good deviation)
-Includes a ton of features you normally have to pay extra for
(Direct entry, CTCSS Decode, "paging" etc.)

Cons:
-Blue Dot Matrix display washes out in most mobile installations, if
you have a big vehicle this may not be a problem.

-Radio gets killed with pager intermod, if you live in the city this
radio is a definite do not buy, unless you feel like adding on a
couple of PAR filters, which will run you a hundred bucks or so for
the filters alone.

Right now the 2M/440 dualband market appears to suck. Yaesu killed
off the 8500, which was probably the best unit out there in
terms of all around use. There really isnt much in terms of
choices... you have the Kenwood V7, the Yaesu 8100, and the Icom
2710. The V7 appears to me as the least painful choice. Havent had
any up front experience with the 8100, but a few I've heard on the air
have low deviation. Havent heard one 8100 that I didn't have to crank
up the volume to hear. The Icom could be a sleeper, they sound
decent on the air...(I've heard one on the air, so far) Not sure
how they fare against rx intermod, though.

OTOH, I own an FT2500M, which is used regularly in the mobile,
and cost a whopping $200. I think it kicks the crap out of any
dualband rigs in terms of intermod resistance, decent audio, and
general reliability. I suppose it all matters on how much you use
440 Mhz around where you live... But here in massachusetts, most of
the 440 boxes are either in disrepair or totally offline, so 2M only
is just great.

>
>No intermod problems near Boston
>
>73!

Obviously you are mistaken. I used to drive though boston twice a
week via route 9,(through brookline) the radio would get trashed on
both 440 and 2M, at various parts of the trip.

Course, I also use a SG7900, so if your using a glass mount antenna or
one of those no-gain contraptions you may not pick up
any intermod at all...

It's also possible that Kenwood did something to the radio in the
later incarnations of it to make it more resistant against
intermod...

>
>Roy Lewallen, W7EL

2x4's in that length might be hard to find, but 2x8's or larger CAN be found, and then ripped down to the desired dimension. If the final-dimension lumber is thoroughly treated, first with a good coat of copper sulphate, and then with 2 coats of linseed oil, followed by a finish cover coat of good exterior paint, it will be weather and trouble proof for YEARS! Use of stainless hardware and long deck screws instead of nails is a good idea too!

I have a newer Wrangler ('97) and an Icom 706, so this is not neccesarily pertinent...but I installed the removable faceplate on the top frame of the windshield centered above the rearview mirror. There was a small latch/bracket attached by two TORX screws which I removed to mount the mounting bracket. I mounted the radio in the rear via the extension cable.

On another note, are there any words of advise regarding engine/fuel pump noise elimination in the Wrangler? Basically the HF is useless when the engine is running.

Regards,

D.J.

Depends on what it's contaminated with. If it's oxide, you can "fray" the wire
end
and dip it in Tarn-X silver cleaner. Takes it right off, but you have to get the
liquid
to all sides of each strand. Not an easy task.
Most times I've encountered "dirty" wire, it's been contaminated from the
insulation.
That effectively isolates the surface from any chemical cleaning agent.

As a general rule, the outer part is the common and the center is hot. Now to make sure we are defining the center. That is noromally called the "tip" and is the end of the plug part. The part near where the wire goes into the plug is the common or "ring".

The climate here in western Oregon is pretty hard on outside wood, but my A-frame has lasted 15-20 years with nothing more than a couple of coats of deck stain. I've re-stained it maybe 3 or 4 times in that interval. It's also important to keep the wood off the ground. Otherwise, in this climate at least, it'll quickly rot and/or get infested with termites. I got 3 concrete pyramids -- the variety with a hole in the top -- at the local home-improvement store, and put a bolt into each, threads up, with a little concrete. The bottom board of the A-frame is drilled in three places for the bolts to stick through, and the A-frame is set down on the pyramids to keep it off the ground.

to the best of my knowledge, lot 3 was the first lot to be shipped from
yaesu with the fix.
the way these rigs are selling lot 3 may be all sold out by now.
lot 4 is on the way, from what i hear.
lot 3 serial no's started with 8n, i would guess that any serial number
numerically or alphabetically higher than 8n is already fixed. any lower and
it might not be (ask the dealer).

Why not use treated wood, Roy? It is sealed and termites don't
like it. "Treated" wood is rated for ground contact.

Ross,

There is no one that makes a dual-band commercial radio.
To get the needed rx sensitivity the commercial rigs have
a very narrow bandwidth.

When you combine two or more bands on the same radio
you loose some rx & tx sensitivity.

1016. Re: dual-band commercial HT w/motorola-type paging?

Isn't the Yaesu FTH-2070 a dualband? I know it's a commercial version.

I have absolutely no problems whatsoever with mine. I use a telescopic antenna with a coil, and a Icom IC-R2. It is built like a little brick, and has a very well supported SMA base mount area. I suppose some radios aren't quite this well made, but oh well.

Thanks for the info.Asking the seller is not an option at a swapmeet. Last
thing you want to do
is ask someone you don't know and will never be able to find later if their
radio is the later (more valuable) version.
If it's a GREAT deal, (which is the ONLY reason for buying at a swapmeet)
you have to be in exactly the right place at exactly the right time.
You have about a nanosecond to decide before someone else buys it out
from under you.
I get goose bumps just thinking about it.

I'd rather just keep the wood off the ground than use wood laced with the toxic stuff used in pressure treating. That's a personal twitch, though, and treated wood should work o.k. if you're so inclined. I realize that the deck stain isn't lovely stuff, either.

1021. VX-5R CTCSS problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-11 00:00:00 UTC
From: Francis <ve2fgs@videotron.ca>
Message-ID: <ECNw2.932$J5.95@weber.videotron.net>
Source record: 117066

Hi there,

First of all, excuse my english.

I bought about 4 days ago a new VX-5R. I think I have a problem with it. I would like your opinion on this.

The problem is when I use CTCSS tone in receive mode. When I operate on a repeater with CTCSS, my radio is very slow to react to the good tone. That means that when I am transmitting, everything is fine, but when I let go the PTT, it takes about 1 to 1 1/2 seconds for the radio to re-open the squelch by itself. (and the repeater is always transmitting the tone...) Wich means that I loss the beginning of the answer that the other person is saying. For example, if the person says "ok Francis, so I'll talk to Jeff tomorrow", I'll only ear "to Jeff tomorrow".

It's very disturbing and the only way to ear the transmissions after a PTT is to hold the MONITOR button, or te remove the CTCSS in receive.

Is there something to do for this ???

Oh, by the way, my radio's S/N is 8N....

Thanks for your help

Hi...

I'm selling my new Sony WaveHawk ICF-SC1PC Scanner. This is a 25 to 1300 MHZ Continuous (excluding cellular) Scanner. Like new. Absolutely perfect condition. Includes everything....scanner, antenna, power module, earphone, manuals, PC Cable, PC Control Software (includes FCC CDROM database), etc. 300 channel memory, preprogrammed Service Scan (incl. Police, Fire/Emg, Marine, Air, Weather), Preprogrammed Band Scan, Memory Scan, Programmable Scan, Intelligent Memory, Priority Scan, Selectable Mode (Am, NFM, WFM), Selectable Step, Direct Manual Tuning, etc.

Asking $300. (plus $10, which will cover shipping and insurance to anywhere in the continental USA.)

If interested, please leave me some email, and we can swap particulars.

Thanks...

Ken (N1NEG)

I have a Yaesu FT-50R dual band HT for sale. The serial number is 6G060972. It has been modified for wide band transmit. These mods were done by a professional SMT fabricator. It is in the original box, with manual, charger, FNB-41 battery, and antenna. The unit is in excellent condition. The antenna is slightly curved.

The extended receive of the cellular bands as described at http://members.aol.com/aeimn/ft50/index.htm work but I have not had the radio in that mode for some time. I did the mod when I first got the radio but had no interest so I reset it.

The following are included:

Yaesu FTT-12 keypad with digital voice recorder and original keypad. (The FTT-12 is installed, the original keypad is in the FTT-12 box)

Yaesu CSC-68 soft case for FNB-41 battery.

Yaesu FNB-42 DC9.6V 1100mAH battery (original box included)

Yaesu adapter allowing use of standard speaker mike (with separate mike and speaker plug) with the FT-50 single plug. The kind that clips to the antenna.

original copy of ADMS 1C Software w/Cable (original box included)

$325 includes shipping within the Continental US.

KE6RQD, richardl

For those of you that have inquired via e-mail, this is a synthesized rig, it is sort of like the Icom 2AT's.

It doesn't use thumb wheels, but does it with knobs.

There is a 5 position band switch for 220-221-222-223-224, there is a 2 layer knob, the largest, on the bottom, is the 100khz selector switch, and the top part is the 10 khz switch. It has a 5 khz switch, repeater/simplex switch, and a 3 position power switch 2-10-20 watts.

Covers 220 to 225 mhz at 2-10-20 watts. PLL synthesized says 1000 channels from 220 to 225 mhz. at 10 khz steps +5 khz shift up. Repeater shift is +/- 1.6 mhz.

I haven't used the rig much, it was part of a friends estate sale that I bought to help out the family... But it does work fine. There was a 220 mhz repeater here when I first purchased it, but the guy lost his site, and it is gone now. The others in the area are too far away.

I also have a 220 preamp and a diamond vertical (think its a diamond 5/8ths).

Soooooo, that's the story there. Thanks for the inquiries.

Before you finalize the design on your home made wooden antenna support,
go to the lumberyard and get prices on various sizes of boards. You may
be pleasantly surprised to learn that LONGER pieces are sometimes
priced lower than shorter pieces because of supply and demand.

That's good news....but how about making it more useful? ie, include a complete catalog, including prices, descriptions, photos, etc, for all the accessories avaible for past and present rigs? That would be really useful. I have a 747GX and a 8100R, and it seems darn near impossible to learn what is available for either one of them. There is a brief mention in the manual of the 8100R of accessories, but no details. I have yet to be able to find a way to learn what was or still may be available for the 747GX.

John KF6TJA

Love both rigs, by the way!

To all Group Members,

A group of collector-historians has recently formed the Tube Collectors Association. This is in response to the need for a focused group dedicated to the growing activity of collecting radio/wireless tubes and to sharing historical insight about them. As a tube enthusiast, you'll probably be interested in this development, and may want to help guide the activities of the group from the start.

For more on the Tube Collectors Association:

It has been my experience that the power supply in those drop in chargers
are good for recharging the battery pack ONLY. When you try to draw the
additional power required for transmitting, you pick up alot of noise.

that comment was flippiant, the main comment that started this thread
was Gregs that Garmin was an industry leader, that was the only thing I
was making a comment aginst...industry leadership isn't based upon "does
my device work ?"

> Now you seem to be talking about reliability in providing a cm-accuracy
> position. Of course, no consumer handheld will ever provide that accuracy
> in the first place - you need a survey-grade instrument.
>

no, I'm simply commentling on Gregs comment about Garmin being an
industry leader....
that would be like saying that Kenwood is an "industry leader" in sterio
equipment...when all they really are are manufacturers of low end
consummer electronics....and not an "industry leader"

damn folks, how many times do I have to type this ?

> Let me rephrase the question: If you were going out into the wilderness

well, seeing as this has nothing to do with being the "industry leader"
in GPS technology, how is this question relavant ?

See, thats the ONLY FUCKING POINT I WAS MAKING FOLKS.

Damn...learn to read.

> Dave

boy, you people just can't seem to read do you.

Here, I'll go REAL slow.

Greg made the statement that Garmin as an industry leader in GPS
technology.

I stated that they were not.

Thats it. No more, no less. For there use, a Garmin is fine, but
surely not an INDUSTRY LEADER.

Damn people, where do you get the idea to state " I
> would suggest that in MANY cases, the surveying instrument would be
> totally unsuitable for uses to which the $300 units are put.
> "

whne my comments have nothing to do with use of the GPS ?

Does use convey "Industry leadership" ?

Come on folks....learn to read.

Good Morning Mr Hackman,

Didn't mean to upset you. I never received the *original* post from Greg on
my server. Or even a *copy* of it.
If we're going to damn anything, let's damn the computers :^)))

Now you mention that Garmin is not an industry leader. Well I will need
some FACTS to support whether they are or are not.
I would like to know your *definition* of industry leader firstly.
Secondly, I would like to know what their stock is doing relative to other
manufacturers in this business.
Thirdly, I would like to know who they *subcontract* their manufacturing to.
My job for a number of years was to provide equipment to subcontractors that
built everyone else's electronics.
e.g.
Trimble
Solectron
Group Technologies
and etcetera !

The electronics you find in any *box* with someone else's name on it surely
originated at a different source.
I know this. I have seen lines set up to build motherboards for Compaq
Presarios, gps receivers, pagers, cell phones, I can ASSURE you that they
were built by the *named company* in only a few instances:
e.g.
Motorola

The *lines* for your hard drive are located, most likely, in Singapore.

Now, is Garmin an industry leader. By *what measure.*
Product innovation?
Units made/sold?
Number of units in use in the field?
-----and in *what markets?*---------
scientific?
recreational?

You see, Mr Hackman, in order to DENY that they are an *industry leader,*
you FIRST have to establish your terms of *what an industry leader is.*

Hello All,

I am looking for a supplier (preferably UK) of crystal / ceramic
headphones, both stereo and mono but they must have a clip or headband.
The end use is for instrumentation where I need something lower power
than a regular headphone; frequency range 500-5000Hz. Not bothered about
connectors as we will fit our own.

Many Thanks,
Mike Page.

1063. FS/FT: Tokyo Hy-Power HX-240 VHF to HF transverter

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-11 00:00:00 UTC
From: "Caitlyn M. Martin" <cait.martin@ibm.net>
Message-ID: <36C3073A.B545EFFD@ibm.net>
Source record: 117108
Cross-posted to: alt.ham-radio.marketplace,rec.radio.swap,rec.radio.amateur.equipment

Hi, everyone,

The previous buyer backed out, so I am listing this again:

I have a rare (in the US, anyway) Tokyo HyPower HX-240 VHF to HF transverter. This device uses your 2 meter all mode rig as an IF. 1-5 watts input gives you 15-40 watts output on high power, or 1.5-4 watts for low power QRP operation, in all modes. (3 watts will fully drive it.) The transverter has band switch positions for 10-80 meters, but can work the WARC bands. For example, if you tune to 147.120 CW on your 2 meter rig in the 7 mhz position, that will give you a frequency of 10.120 in the 30 meter band. (This also works for SWLing.) The unit has a very effective preamp and an output power meter.

This transverter is great for someone who has a very good 2 meter rig with lots of features to take advantage of, and wants an inexpensive, high quality route into HF or a very good backup rig. I used it with a bare-bones Yaesu FT-290R, and it did a great job as both a portable and base rig, and it's small size is ideal for those of us who can't afford to go out and buy a new IC-706II. So, even the most basic 2 meter all mode can work well.

Unit was made and imported in the early '90s. It is in very good condition (some minor marks and scratches), except that the previous owner wrote operating instructions in magic marker on the bottom of the unit. This is not visible in a normal operating position. This is a tiny rig. It comes with the DC power cord, but no box or manual.

You can see a picture of it at:

http://www.netferrets.net/images/temp/HX240.JPG

Will sell for $225 firm, including shipping. I would love to trade this towards an NCG 7/21/50, if someone has one they are willing to part with, or I will accept an NCG 15M in partial trade (but not an NCG 15SB). Please do not write me offering different items for trade, as I will not accept them. Prepayment by money order or cashier's check, please. One bounced check spoiled it for everyone else.

Thanks and 73,
Caity, KU4QD.

1064. Re: Radio Install--Jeep Wrangler

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-11 00:00:00 UTC
From: ve3jtr@rac.ca
Message-ID: <79v472$601$1@nnrp1.dejanews.com>
Source record: 117109

I know we don't have the same radio, but I mounted my V7A inside the center console and used the remote mounting kit to mount the face on the dash and the mic plugs in under the dash. When I leave the jeep, I lock both the mic and the faceplate in the console. The console is not really 100% secure, but out of sight out of mind. I mounted the bracket to the floor of the console, then I had to use a wrench to fasten the radio to the bracket. It is a little tight, but the radio just fits. The heat sink actually sits under the cup holder section of the console and there is nothing else in up there so I think there is plenty of room for heat to escape.

I'm looking for an Icom 47A.

Preferably broke, but working Ok. It NEEDS to have all knobs and buttons, display and case parts in somewhat decent condition. Other than that, it can be fried.

You can see I'm looking for cosmetic stuff and PCB parts.

If you ONLY have a working model, and don't need a fortune for it, email me directly, or post it here.

To Email, just remove the NOSPAM below and it works.

NOSPAMtracklwl@sgi.net

Thank you for your time.

Hackman <hacker@nospam.jump.net> writes:

>that comment was flippiant, the main comment that started this thread
>was Gregs that Garmin was an industry leader, that was the only thing I
>was making a comment aginst...industry leadership isn't based upon "does
>my device work ?"

I suspect that Greg was saying that Garmin was the industry leader in terms of selling large numbers of consumer GPS units to mostly happy customers. If the original question was asking about recommendations of consumer GPS units, then his comments were entirely warranted.

If you, on the other hand, were pointing out that Garmin is not an industry leader in developing survey-grade GPS equipment, you would be right too - and irrelevant, since that's not the sort of units being discussed, nor the sort of leadership being discussed.

>that would be like saying that Kenwood is an "industry leader" in sterio
>equipment...when all they really are are manufacturers of low end
>consummer electronics....and not an "industry leader"

So you believe that there can be no such thing as an industry leader in low-end consumer electronics, because technology leadership is all that counts?

>> Let me rephrase the question: If you were going out into the wilderness
>> somewhere without map and compass, and depended on a GPS to get you
>> home safely ....

>well, seeing as this has nothing to do with being the "industry leader"
>in GPS technology, how is this question relavant ?

It's relevant because *you* said that you wouldn't trust your life to a Garmin GPS, that they were not reliable.

>Damn...learn to read.

I read quite well, thank you.

The problem seems to be that you make snide comments about "leadership", while not bothering to read the article you are replying to well enough to know that the type of leadership it talked about is different than the way you define leadership.

Then you make comments about "reliability", but it turns out you are talking about a different definition of reliability than most people here would use - then try to get out of it by saying it was only a

flippant comment.

It seems to me you dug your own hole and jumped into it. Don't blame other people.

It seems that what *we* should learn is that your articles are mainly flippant comments, and it's not worth asking for specifics of what you mean because there's no real useful content there in the first place.

Message-ID: <79v3nc$c201@news.abbott.com>
Source record: 117115

I was recently (a couple hours ago) given a Kenwood TR-7400A. Operation of the rig is fairly intuitive, except for the four position rotary switch in the upper right corner. It is marked "SQU, OFF, BUR and SUB." SQU and OFF are obvious but what are BUR and SUB?

Also the rig quit receiving (that's why I got it for nothin') but still transmits. Any ideas as to where to start troubleshooting? Besides the obvious of course such as connection to antenna jack, etc.

Thanks for any help,

>priced lower than shorter pieces because of supply and demand.
>

This is true.

I did not mention that I have built one myself. It is 36 ft tall and is
made out of combinations of 12 ft and 8 ft 2x4s.

The traditional A frame mast was made out of 2x2 lumber, but 2x4 is much
sturdier. I estimate that it will stand up to 100+ MPH winds with no
trouble (am using 5/16 inch steel guy wire and 4 ft anchors).

The reason I mentioned using 8 ft 2x4s is that the original poster wanted
something portable. An 8 ft piece would be much easier to carry around than
a 12 ft piece. In my case it was for fixed use.

By the way, I had originally planned on a 48 ft mast, but it proved too
heavy to erect, so I shortened it to 36 ft. Even then I had a total of 4
people to pull it up (including myself). I guesstimate that a 21 footer
would be no problem for 2 or three 'trained' people.

if the industry lead is in low cost, yes, you can lead an industry that way....

if the "industry" is technology, then price doesn't equate to industry leadership does it ?

Think of it this way....if I speak of the industry leader in computer technology, will a Timex Sinclair qualify ? There were the cheepest you know.

I came to the conclusion that those adapters aren't all they are cracked
up to be also; after putting one of those with a bigger antenna on my
FT-50, I sat on the radio and snapped off the connector. Took a week
for the replacement to come in; nowadays I just use the old sma
antenna.

If anyone is interested, I posted some stuff on my webpage on how to
open up and replace the case on the FT-50, just in case anyone else has
done the same thing that I did.

1078. Re: VX-5R CTCSS problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-12 00:00:00 UTC
From: Francis <ve2fgs@videotron.ca>
Message-ID: <lHYw2.1367$J5.847@weber.videotron.net>
Source record: 116873

The problem is not all the time, it's only after a transmission with the radio. If the radio is just waiting on a frequency with a PL, everithing is very fine. If the radio is scanning, if it stops on a frequency, the PL will be decoded very fast and I have nothing to say about it. The problem is after a PTT. Every time you use the PTT knob, when you release it, it takes the radio more than a second to re-open the squelch (PL decoding). Even if the repeater is always transmitting that PL tone. That is my problem. If you do not transmit with the radio, you will never have the problem.

I'm looking for a near-mint Kenwood R-820 receiver, with all docs.
Please drop me a note if you have one available.

Thanks,

Paul WD8DKY

Having just applied for a permit for a well, I can say that
it's because, "We want it done that way." Largely so they
can check for setbacks, avoidance of surface water problems,
etc.

(It's too late now, but there should have been a
single "Followup-To:" set early on in this thread.)

HAMFEST March 7, 1999 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB & SUFFOLK COUNTY RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - MARCH 7, 1999

On March 7, 1999 the Great South Bay Amateur Radio Club & Suffolk County Radio Club will again sponsor an indoor Hamfest. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.

There will be radio equipment, electronic componets, computers and accessories, softeware, books, technical manulas, ARRL information, Amateur Radio License Exams, Door Prizes. General admission is $ 6.00.

VE - ARRL - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam seesion. 1999 ARRL/VEC fee is $ 6.45, exact change is appreciated.
Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

For vendor and additional information pleas contact, Peter Portanova WB2OQQ at (516) 541-4886.
Email info@gsbarc.org

Talk-in will be via W2GSB Repeater on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

-> I am looking for a supplier (preferably UK) of crystal / ceramic
-> headphones, both stereo and mono but they must have a clip or headband.
-> The end use is for instrumentation where I need something lower power
-> than a regular headphone; frequency range 500-5000Hz.

I take it you need something a bit more elaborate than the usual
"earplug with a hook" as used by TV newsreaders.

Not the chepeast option, but you could do worse than use the Sennheiser
range of hifi headphones - these are high-impedance (about 4k-ohm I
believe) and quite suitable for low-power signals. I have often used
them sucessfully for signal tracing in equipment, using body capacity to
earth as a return path.

For sale -listing for a friend a Classic Gonset GSB201 10 to 80 meter linear. It is in excellent condition and is on the service bench ready to be shipped. It has-a brand new set of Svetlana 811A tubes, full set of new power supply 1kv 1a matched diodes, Richard measures parasitic suppressor kit mods installed ie grid protectors, plate choke suppressors, meter protector diodes, plate to tuning cap suppressor, grid bias cutoff mod, 12v dc ant relay mod for easy switching, HV protection resistor, filament adjustment to keep tube life very long. Front panel and case is in very good condition, also has original manual plus documentation photo copies. I sold my friend one of my SB220s to match his Heath station so hes letting the GSB201 go. All wiring done perfectly as he is a certified technician. Asking $475.00 or best reasonable confirmed offer. Thanks

> on the speaker?ï¿½ That seems a little too easy!ï¿½ Thanks for your time.
> ï¿½
> ï¿½

Apply an RF signal to the radio's antenna jack at the frequency you want to
measure.
Using 5 KHz FM deviation or 100 % modulation for AM, measure the level at the
radio's phone jack.
Adjust the volume with a full quieting signal until you measure 0 db on the
analyzer's audio meter.
Turn off the modulation (the audio level should measure between -35 and -50
db).ï¿½ Decrease
the RF level until you measure -20 db of noise.ï¿½ The R.F. level in microvolts
that yealds -20 db
will be the radio's sensitivity.ï¿½ï¿½ï¿½ Some manufactures will use -10 db to get a
lower reading but
that's cheating!

From: nospamjadams@mcqassociates.com
Message-ID: <36c48229.23663430@news.crosslink.net>
Source record: 116887
Cross-posted to: rec.radio.amateur.equipment,rec.radio.shortwave

Greetings all:

After having my R-5000 for close to 10 years now, I have purchased the IF232C interface and the assorted internal interface chips. To make a story short, I still cant get it to play using SCANCAT. I can see RS-232 pulses on a RS232 LED monitor tied to the IF2323C, but the radio does not respond.

Kenwood has a Service bulletin ASB-0919 for the R-5000 that says to replace IC52 on the control unit, a 27128 EPROM which is now changed to a 27C128 EPROM on radios w/ serial numbers below 804xxxx. I have a radio w/ serial number 00070xxx. Kenwood says my radio is newer.

How to you read the Serial number?

Why (or HOW) does this chip replacement fix the problem? (It appears that the fix replaces a TTL level chip w/ a CMOS chip).

Cross-posted to: alt.law-enforcement,rec.radio.amateur.equipment,sci.geo.satellite-nav

:Hi Mr. Hackman,
:I believe you are mixing apples and oranges here without benefit of a
:sauce. Surely we all agree that a $300 GPS receiver of whatever brand
:is potentially not as accurate as a $10,000 surveying instrument. I
:would suggest that in MANY cases, the surveying instrument would be
:totally unsuitable for uses to which the $300 units are put.
:
:When you attempt to qualify one instrument as "better" or "more
:reliable" or "more accurate" or whatever, you must state and be able to
:support your criteria. (That is if you are SERIOUS about such
:statements.)
:
:So... Yes. I believe there are more reliable, more accurate, more
:robust, GPS receivers than Magellan, Garmin, Lowrance and similar
:consumer units. HOWEVER.. If I am not able to quantify these beliefs,
:I am not able to make categorical statements about these areas.
:
:For instance:
:
:Do you know the manufacturer's rated MTBF for each of the receivers you
:are comparing as one being more reliable than the other?
:
:Do you know the actual field measured MTBF for each (or any) of the
:receivers you are comparing as being more reliable than another?
:
:Some suggest that (for instance) Garmin receivers have more failures
:than <say> Lowrance receivers. They say that they are basing their
:statements on the fact that you read more about Garmin failures on the
:newsgroup than Lowrance. Could this be because Garmin receivers are
:more popular with consumer and that as a result they sell many fold more
:units than some other brands? Without good statistics, I cannot say
:for sure. Can you?
:
:If you have *REAL DATA* Please! Lets have it! I am very interested in
:this area, but without *real data* we do not have any basis for
:comparison or even intelligent discussion of comparative reliability.
:

Joe, you might be in a better position to answer this than most.
But who does most of the development in GPS? I was under
the impression that Rockwell and Motorola made most of the
GPS receiver ICs. These are used in most receivers such as
Garmin and Eagle.

At least in the small aircraft are using Garmin. I do see a lot
of Rockwell/Colins equipment as well. Rockwell also has a
the lions share of the military market (PLGR II).

Trimble was great but seems to be dying. Eagle and Magellan
are OK but Garmin seems to be ahead of them in the consumer
market. Garmin is picking up military contracts as well.

Maybe you could give us a better overview.

John,

See the website for MDM Radio.

That's where I bought mine, and I don't see how you can beat the price
(no I don't work for them).

http://www.mdmradio.com

Hope it helps,

Ron, N7TAW

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner,alt.radio.scanner

There is currently no SMA antenna that is competent below 100mhz, such as 30-50mhz. So until that happens, the adapter will have to be.

When my radio lost power it somehow went into the European mode.
Transmits on 144-146 and 430-440 only. Does anyone now how to get it
back to USA mode. I do have ADMS software if needed. No mods of any kind
were made. Stock radio.

Thanks
Vinny

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=66518588

This is/WAS a C band up-converter used years ago in commerical satellite uplinks. Put 70 mhz IF into the unit and get 6 ghz output. This unit will not be used again in commerical use. However it does contain a lot of goodies that hams or other techs could use. Follow the above link to Ebay take a look at the unit. I put together a big jpg and it may take a minute for phone dial ups to download. However I think you will find it is worth the wait.

Source record: 116974

After a brush with the wire brush I dunk it in Amway Metal Paste.
It has citric acid and that cleans up copper quickly. Great for
PCB board, too. Rinse it off after, tho. If left it makes an
even more worser mess! :-(

so far it's much better on AM & fm than the vx1 that I have. I also get the feeling it will receive better on 155 & 463 areas...at least stock antennae to stock antennae. I was pulling much more out of my local security force on 154 than I do on the vx1r.

can't comment on 50 mhz yet, nothing around here on. SW seems to be decent. 800 seems good too.

So far a winner!

I'd like to find a good used frequency counter for hobby use.
Nothing real fancy, just at least 100MHz, accurate & stable.
Higher frequency would be nice, but 1.3GHz is probably
overkill.

Let me know if you have something you'll part with and
how much you're asking.

1146. Lakeshore Phasemaster II transmitter??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-12 00:00:00 UTC
From: The Family <fotolady@magpage.com>
Message-ID: <7a0e8v$j93$0@204.179.92.74>
Source record: 116998

I'm helping settle an estate and a friend of the widow is interested in buying one of the pieces, a Lakeshore Phasemaster II. It's in about a 7-8 condition. It has a single 6146 final, 160-10M coverage, eye tube and VFO on it. What's it worth? I'm not making anything on this one and they'd like to know if there's a fair value on the thing. What's a good ballpark?
Jim

From: barryng@ibm.net
Message-ID: <7a0ijo$f1q$1@nnrp1.dejanews.com>
Source record: 116999

I have an 8100 and experience the same problem. I want this repaired as it is
a very annoying characteristic. However, I am undecided as to which warranty
repair facility to send it; Yaesu or RT Systems in Huntsville. Virtually all
my previous experience has been with Icom so I do not have a feel for the
competence of either of these choices. Unfortunately my first major purchase
of a non Icom rig has not proved to be a wise decision so far.

<snip>

Looks like a low-quality CTCSS decoder circuit in the VX-5R... much
slower than any other radio I've seen... 500-100ms I'm guessing, where
a good PL decoder should be under 200ms.

Rather than fixing the slow decoder, the new batch (serial 8Nxxx)
seems just to wait longer on each memory channel during scan to 'wait'
for the CTCSS decoder to lock-on.

Another black eye on a neat radio (locked out 864-869Mhz and
917-943Mhz is my other irritant).

I have the following equipment for sale and/or trade.

*****SOLD***** Icom IC-25A 144MHz FM Transceiver
Frequency Coverage: 143.800-148.195MHz
Output Power: 25W(High), 1W(Low)
Good condition. Works great! Comes with manual.
$75.00 shipped

6' Equipment Rack
Standard 19" wide rack. Large cooling fan mounted on top.
Great shape! On wheels!
Pickup or delivery only. Will deliver withing 25 miles of Lake Villa, IL.
If you have and idea for shipping arrangements, please run them by me. We might be able to strike up a deal.
$425.00

Siemens Programmable Logic Controller
Two Power Supplies, One CPU, One Handheld Programmer, One Digital Input Module, Two Digital Output Modules, Three Bus Modules.
No, this does not program radios. It has a series of inputs and outputs. Once programmed, it will monitor the inputs and will turn on and off the specific outputs.
$150.00

Sony Hyper HAD Color Video Camera
Excellent condition! Comes with 24VAC Power Supply.
$250.00

I am looking to trade for the following:

Kantronics KAM+ TNC

Icom CT-17 RS-232 Level Converter

Vertical HF Antenna

If you have something else you would like to trade, please tell me and I might just want it!

You can e-mail me or call me by telephone.
E-Mail - zman@iwc.net
Telephone - (847) 587-0551 - I have voice mail, so if I'm don't answer, leave voice mail. I'm usually here, but sometimes I'm too busy to answer.

Thank you,
Christopher Zeman, KB9RHA

1155. FS SB-220 KW Linear Amp (Wah DC)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-12 00:00:00 UTC
From: Jake Arnold <jakeemail@yahoo.com>
Message-ID: <36c41c12.0@news.realnews.net>
Source record: 117007

Problem free Heath SB-220 KW Linear Amplifier
80 -10 meters coverage
Tubes - Pair of 3-500Z's
Quiet Fan
Instant on
Works on 120 or 220 Volts
Comes with Manual & Service Bulletins
Price $535

This Amp is easy to tune and works like a brick. On 80 meters I drive it with a 10 watt AM transmitter which gets 400 watts out and audio good reports. Amp appearance still looks new with no 'knob-wear' marks. Amp is under a wood shelf so it's even been protected from the normal layer of dust that typically gets in open mesh rigs.

Only reason I'm selling is that I have a 160 meter dipole and want something on that band.

Don't want to ship, so looking for a sale in the Mid Atlantic Region. I live near Wash DC.

Source record: 117014

Had a couple of tire kickers, few inquirers, one close call, but nothing
firm, so I'm lowering it by $100. Back under the bench after that if no
interest.....

FS: Excellent Condition Late Serial Number Paragon (04B10391)

- Optional 1.8 SSB Filter
- Optional 500, 250 hz CW Filters
- Optional FM Board
- Optional RS-232 Board
- Ghiel Chip (also have stock chip)
- Looks and works excellent, non-smoker
- All documentation
- Power cord

Excellent receiver, carrier right on frequency, no hets when switching
to USB/LSB from an AM signal. Great for SWL'ing or BCB DX'ing using ECCS.

Typical Paragon power output (could be adjusted up or down if need be)
160m - 110w 30m - 90w 15m - 80w
80m - 110w 20m - 90w 12m - 80w
40m - 105w 17m - 80w 10m - 80w

power is adjustable down to ~5w from front panel as is.

$1000 + shipping/insurance (no trades please)
Do not want to sell options separately

Will sell Astron SS-25 power supply that I use with the Paragon for $50 to
the buyer of the Paragon.
Please email direct if interested..
Thanks
Tim

1165. TS570D vs. 570D(G)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-12 00:00:00 UTC
From: ny4t@home.com
Message-ID: <36c73d90.41235232@news.nash1.tn.home.com>
Source record: 117017

I've seen some good prices on the used market for the Kenwood TS570D. I also noticed that the 570D(G), an updated version sells for $400 more new. I am aware that the DSP was enhanced in the (G) version but I wonder, were there problems with the original? Also, were there any other changes made in the upgrade?

The problem I am wrestling with is which used radio to buy in the $800-900 range. I will be using it primarily for contesting, about 75% SSB and 25% CW.

The rigs I've seen in that range that interest me are the 570D, the Kenwood TS450SAT (already own one) and the Yaesu FT767.

Any advice would be appreciated.

I don't remove anti spam so the reply is here. If you want help you
remove it.

The optical encoder needs to be aligned. Requires a 'scope and about 5
minutes..

> and has a very well supported SMA base mount area. I suppose some radios
> aren't quite this well made, but oh well.

The problem comes from the SMA connector--it has a small diameter outer conductor (the threaded part). It inheriently will not take much force to snap it, regardless of how well supported it is in other places. I'm glad that you haven't had any problems with yours, but that may be because, unlike me, you try not to sit on your radio. If you're careful, then there shouldn't be any problems with these adapters; I think this thread came about though because us hams tend to "abuse" our equipment, by making them do things that it wasn't intended to do.

Just my two cents.

By the way, I've dropped my radio at least three times, and once from a height of about 6 feet. No damage yet.

I'd be quite happy to have either radio for free!

Seriously, they are both quite close in performance but have a very different 'feel' to them, in my opinion. I assume that you have played with them both and have some preference one way or the other? I'd go with my gut feeling, will reduce any after-purchase jitters. You really can't go too wrong with either one of these, if you want a new rig, especially now that Icom has dropped the price on the 746 a little.

That having been said, my choice was for the 746. A lot of performance in a small package, and I felt the user interface was much more intuitive. Also better rx performance from what I could tell in the store off of the same antenna, but this is not a very scientific or complete was to compare the units. I also think the DSP on the Icom is a little better. Great CW features as well, but the 920 is pretty stong in that regard too. Either radio is going to need some aftermarket filters, either narrow CW or SSB, depending on your preference. There's room for both in the 746, unsure about the 920, but check out the extra filter capability on both units as this will probably be important to you later.

Just one opinion...

1180. TS440S Questions

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-13 00:00:00 UTC
From: Terry Brown <browntl@concentric.net>
Message-ID: <36C5E149.B3164921@concentric.net>
Source record: 116832

I'm trying out a used 440Sat and see a couple of oddities. I wonder if anyone can comment on normalities/fixes?

(1) Squelch control does not function.
(2) Notch control cuts all sigs off at about 2 o'clock position (whether Notch is switched on or not).
(3) Mode/Key and Memory keys seem to be overly sensitive (they repeat themselves too easily rather than functioning one press at a time). For example, pressing the "1" key gives multiple 1's, etc. Pressing the Mem/VFO key toggles back and forth between Memory and VFO several times per single key press.

If anyone has any comments or ideas, please let me know before I buy this thing. Thanks.
Terry (KA5IHV)

1181. TM-V7A Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-13 00:00:00 UTC
From: QESK41A@prodigy.com
Message-ID: <7a4ov1$8p7m$1@newssvr04-int.news.prodigy.com>
Source record: 116833

Is anyone aware of any problems with the TM-V7A with regards to vibration? I have my radio installed in a 1989 Chevy Suburban, using the factory bracket, and find that the unit is extremely sensitive to road vibration, turning on/off sporadically, and experiencing changes in Modes (ie MR to VFO), as well as strange (Japanese?) characters appearing randomly on the screen.

Is this my radio, or is there a known fix for this?

Any and all help appreciated.

Gary, he's badly mistaken. An amplifier does just what its supposed to do for 10M. While on Guam, I could always tell which Italian was running 10KW - they were far louder than the rest of the European pileup. You kind of had to work them just to get them out of the way. You didn't have to QSL, however. ;^)

1189. Help with Icom IC-3SAT?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-13 00:00:00 UTC
From: dunham@removethis.earthlink.net
Message-ID: <MPG.112fb24842afe9bc989689@news.earthlink.net>
Source record: 116841

Hi, I just bought an IC-3SAT. It seems to be a great little radio, and I got a nice deal on it. It has one anomaly that I knew about when I bought it - the receive indicator (the S-meter, not the LED).

When the radio is first turned on, the S-meter is "off." Pressing any key or turning the tuning knob causes it to turn on for five seconds. Scanning causes it to stay on. Any signal causes it to go full scale.

Other than that, it works perfectly.

Has anyone run into this before, or have any ideas?

From: Steve <sbynum@NOSPAMearthlink.net>
Message-ID: <7a556andt1@ash.prod.itd.earthlink.net>
Source record: 116846

Ive tried both. I was very disappointed with the Yaesu receiver. It tends to be a little on the noisy side. I got the specs out and was shocked to see that the receiver only has double conversion ! {2 if stages}. If you have had a rig with triple or quad conversion, you will most likely notice the double conversion performance of the FT 920 quickly.
The IC 746 has quad conversion {4 if stages} in the receiver and is very quiet. This rig is not for the easiest rig to operate "at the start". Once you have went thru the manual and have learned the front panel functions the rig is very user friendly. I find that the IC 746 has the best bang for the buck....a great deal for around $1550. You better hurry though...i hear the IC746 goes back up by $200 in March.

1197. Re: ICOM 746 vs YEASU FT920

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-13 00:00:00 UTC
From: Steve <sbynum@NOSPAMearthlink.net>
Message-ID: <7a5p2f$m6e$1@birch.prod.itd.earthlink.net>
Source record: 116849

Gary, the rule of thumb is the more stages in the IF the quieter and more selectivity the receiver and these rigs usually cost more $$.
Some rigs with quadruple receivers..
1. TS 950
2. TS 940
3. IC 781
4. IC 765
5. IC 761
6. IC 746
7. FT 1000
8. FT 1000MP
See the tendencies here? All have awesome receivers.

Some Rigs with double conversions...
1. TS120
2. TS 140
3. FT 890
4. FT 920

Gary you totally missed the point. How much adjacent noise can you handle? I have to believe the 3 major Radio companies had a purpose for the 3 and 4 stage receivers in their mid to higher end radios. Name one radio {solid state receiver} that uses double conversion that is well known for its receivers selectivity?

Gary Coffman wrote in message <36cc52c5.24189664@news.atl.bellsouth.net>...

Hi Greg,
Unfortunately, I have no overall GPS market stats I can quote. The market is quite fragmented with many vendors overseas and in the professional GPS arena that you and I have never heard of.

I hope someone will step in here and give us a good overall market view. I for one would appreciate it.

Thanks for bringing up this topic Greg.

From: nworbekim@my-dejanews.com
Message-ID: <7a2vcahnc1@nnrp1.dejanews.com>
Source record: 116923

I had the same problem several years ago... after some research, I found a bulletin on the Kenwood technical bulletin site about it.

On the vco section of the board, I think its the second one down, can't remember its been a long time. Anyway, its enclosed in a box.... they sprayed the circuit board with some rubbery gunk that was supposed to keep it stable. Well, over the years it gets porous and conductive. If you will carefully scrape out all of that gunk, it will help.

Also, the bulletin goes on to say that you should replace some resistors, as I am real lousy with an iron, I had a friend pull them and make sure the legs were clean, we didn't replace them.....

Its a common problem, fairly easy fix if you can find the info. I still have it somewhere I think, if I can lay my hands on it under one of these piles of junk in my shack, I will post it. seeya!

1214. Rugged Radios - AN/PRC-138 vs. KenYaeCom rigs

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-13 00:00:00 UTC
From: qwasty@hotmail.com
Message-ID: <7a38is$on7$1@nnrp1.dejanews.com>
Source record: 116929

Hey, does anybody have any experience with the AN/PRC-138 radio by Harris? I'm looking for the most rugged radio available that can be used for emergency communications as well as general hamming while DXpeditioning. The ideal radio would TX and RX 1.6-500Mhz, but so far that seems unrealistic. The AN/PRC-138 seems like it would fit the bill for HF-6M operation, which is what I would use most of the time anyway. From what I gather, it's perfectly suited for data transmission, email etc. It'd be nice to have VHF/UHF for satellite work, but I suppose I could get a Yaesu FT-847 along with the AN/PRC-138 to pick up the slack. Does anybody have experience with PRC-138's? pros/cons or general suggestions? I have been able to find very little information about it, and Harris doesn't seem to know how to read email. Anybody know about it's price?

While I'm on this topic, I might as well ask about the FT-847 and Icom's IC-706 series (maybe the FT-100, when it comes out). Does anybody know how tough these radios are? My impressions, just from the pathetic photos that the manufacturers provide, it looks like the 706 is the tougher of the bunch. I've seen at least one complaint in the newsgroups that the 847 is too "plasticy". It doesn't really look very tough and I'd bet a misplaced cup of coffee would be enough to put it out of business. Does anybody know how much of a difference a special custom made container could improve it's ruggedness? I would think that if the circuit boards and solder-pads are cheap to start with, a good jolt in a padded case or out of a padded case wouldn't make any difference. I'd still have to find all the parts that came away from the PCB's. I guess I can't really operate the radio if it's snuggled away behind 6 inches of foam rubber anyways so maybe I'd better get a radio that's invincible to start with...

Richard, I have two of them from 1978. They always worked fine. I went down to the local radio-control flying field in the early 1990s, and the club told me the FCC had recently mandated the use of narrower-band transmitters and changed the channel frequencies so as to place the Heathkits between current channel frequencies. Too bad. But I remember they performed flawlessly.

Good luck- Tom K4AKC

1216. Looks like ICOM did it...the first!

I assembled the 222-225 MHz version of that kit for a local ham who wanted the radio but didn't feel up to doing the assembly. Even though the assembly instructions weren't up to the standards I was used to (spoiled by) from my Heathkit building days, they were more than adequate, and I enjoyed assembling it.

I gave the radio some on-the-air testing, and several people commented on the high quality of my signal and audio without even being asked, so I suspect you will be satisfied with your 2 meter version.

I felt that the kit looked quite nice when assembled, and that the case was nice and solid, not at all flimsy. There were a few minor details that I would have designed differently, such as the way that certain sub-assemblies went together that would make it more difficult than necessary to take them apart later for repairs or modifications. But overall, it seemed to be a very high quality radio for the price. Of course, price is a BIG issue with the 222-225 MHz band, since the supply of radios is pretty small.

Anyway, I think you'll be happy with your purchase. Good luck!

John (KB0ZEV)

I'm using this rig for mobile operation with a Hustler antenna and it's working great. I've even broke through a few pile-ups on 20 meters, so it does put out a respectable signal. No modifications made. Has FM board, original mic, mobile mounting bracket and owner's manual. The speaker mounted on front face puts out good audio, so no trouble hearing other stations while driving. Simple to operate too. Looks are an 8 (I'm the second owner and a non-smoker so rig is clean). Reason for selling is I bought a rig that has 6 meters. Asking $425.00 and I'll pay shipping. E-mail or phone 770-972-7248 (home) or 770-640-2476 (work) for information or to buy.

1223. Yaesu FT-100 rx spec change?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-13 00:00:00 UTC
From: Dan Elekman <elekman@interaccess.com>
Message-ID: <7a3r73$rk3$1@remarQ.com>
Source record: 116938

Today I received the Amateur Radio Trader. There is a new full page ad for the FT-100. It states that the rx frequency coverage is: 100 kHz-76 MHz, 108-174 MHz, and 420-512 MHz.

Now compare this to the specs on Yaesu's website:

RX :100 kHz - 970 MHZ (Cellular/digital telephone freqencies are blocked)

I hope that Yaesu did not advertise the wide band receive for all these months just to look better than Icom then change the specs just before shipping to the stores.

Can anyone confirm what the actual receive frequencies are for this radio?

I need any help you can supply about the above set.
I believe it's from the 50's. A domestic broadcast receiver
in a brown Bakelite cabinet 18"x14"x12" 250v ac. The back
panel is missing so there are several sockets I need to know
the purpose of. I suspect one valve to be dud as the top cap is
loose, DH63M. Speaker cloth requires replacing and it has a
couple of broken knobs, somehow I must get a photo onto the
Ng's. Does anyone know if Radio Bygones have ever featured
this receiver ? The audio side sounds like it works but nothing
from any of the wavebands.

Model T10A. Ser. No. 38353

Source record: 116942

:Hi folks!
:Yesterday I got my Icom IC-706MK2G. Wow! So pretty mighty midget!
:I'm already use 706&706MK2, but each time Icom do it better and
:better.
:My opinion - do not waiting many times promised FT-100, run and buy
:ICOM IC-706MK2G, THE mini rig with a lot of enjoyable features. All
:we need is...Icom!
:Igor UN7GM@QSL.NET
:
:

I only have two complaints.

The radio needs more memories. The FT-100 has 300.
And ICOM needs a screwdriver antenna like ASAS-100.
Or at least a control box that takes the microprocessor
commands and drives one of the current screwdrivers
on the market.

1228. Re: Ten- Tec Tkit?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-13 00:00:00 UTC
From: dinoal7lz@aol.com

Source record: 116943

I just finished thd 6 meter version and am very pleased with it. Have to agree that the instructions are not quite as detailed as Heathkits used to be, however, TenTec makes up for that with their thorough circuit description that does a very good job of explaining how the various stages work. Mine worked fine, but it sure helps to have some decent test equipment available when things don't go quite like the instructions say the first time around. Was it worth the $100 difference in price? I like to build kits so that's what made the difference for me--if you don't want to spend about 25 hours or so then buy it ready made. Problem with that is that you can probably buy a comparable commercial rig for about the same price with more power and bells & whistles.

From: Chris <n8cop@qsl.net>
Message-ID: <01be5760$0d6ee180$c4b651d1@hp-customer>
Source record: 116945
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi to all. I have an Alinco DX70th that I run in the mobile and as of late, the display begins to blink 5-15 minutes after being powered up. The rig works fine on receive and xmit before the blinking begins, but afterwards, its unusable. I've tried to do a full reset and that has not solved the problem. I believe that some internal part may be going bad once the rig gets warmed up, but i'm not sure.

Anyone with a similar problem or knows of a possible fix please feel free to e-mail me at the address below.

Thanks in advance,
Chris M.

LA-1000-A linear amplifier, table top model made my Amp. Supply. Covers 160-15 meters (you do not need an amplifier for 10 meters!). 1200 watt PEP plate input power. tuned input. uses four 6MJ6 or 6JE6 or 6LQ6 tubes in parallel. in great shape, comes with two extra tubes. Checked out recently by local electronic technician. Looks new inside, excellent outside. Power caps in good shape...put out full plate voltage. asking $250 plus ship.

1241. DXER'S LIBRARY SALE

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-13 00:00:00 UTC
From: "Ralph W. Perry" <theperrys@kwom.com>
Message-ID: <lBhx2.16$Et1.235@news9.ispnews.com>
Source record: 116956

Here's some more great stuff, fished out from the shack from a never-again DXer.

1. THE DX EDGE!!! Totally cool 1970s technology for determining daylight/darkness terminator's path at any time. Consists of 12 hard clear plastic sheets with terminator drawn, plus a large map plastic guide within which the terminator plastics slide back and forth, depending on time. Very effective. Grayline Dxers NEED one of these. $22

2. QSLER'S DELIGHT: Four books guaranteed to make you a better verification hunter. 'LA Commercials' by Klemetz/Ingelstrong of DSWCI; 'Secrets of Successful QSLing' by Dexter, both versions, the small and the large; and the 'QSL Address Book' by Dexter. All 4 book for $32.

3. DXER'S LIBRARY: Some great reading in this lot: 'Shortwave Receivers, Past & Present' by Osterman; 'Low-Band Dxing' (ham band 160, 80, 40, but some great takeaway knowledge for SWBC Dxers, too); and '1934 Official SW Manual (reprint). $35 for these three bound books, in super condition.

4. STOCKPILE OF PREPARED QSL CARDS! Here's a stack, about 6 inches high, of multicolored prepared QSL cards in Spanish and Indonesian, handy for verifying those out-of-the-way stations. The Spanish cards are the famed 'Certificado de Sintonia' format (the originals). There must be more than 600 cards here, ready to go. $30 takes 'em all.

Buyer also pays shipping.

==========

And for those of you who missed it, here is an updated version of my earlier ad, featuring other nice material:

RARE AND DESIRABLE, VINTAGE SWBC ITEMS FOR YOUR SHACK!

1. WORLD RADIO TV HANDBOOKS!!! Complete your collection's gaps now!
' 1984 thru 1988 - fine to near mint condition, $12 each
-- 1990 thru 1992 - near mint condition, $11 each

2. 'NUMERO UNO' weekly private DX newsletter: Wow, a complete run of issues from the heyday of this legendary DX weekly, from 1972 - 1984!! Three binders, 3-inches thick each, jammed full of DX news, pioneering reports on rare DX stations, feature articles, controversy, you name it. Finally, you can now see just what all the noise was about and read what those 'elitists' (hi!) were up to! Full-sized 8.5 x 11 sheets, a stack of paper 9-nches thick, 600 issues. Won't break this up, to be sold as one lot. $250 firm.

3. FINE TUNING: Again, a mother lode of early issues from another late 1970s/early 1980s private circulation DX every-couple-weekly: issues 1-70, 113-140, 172-239. One stuffed 3-inch binder. Plenty of great DX info. $50.

4. &#65533;THE RADIO BOYS SEARCH FOR THE INCA&#65533;S TREASURE&#65533;, here&#65533;s one that you never see, a hardcover &#65533;Hardy Boys&#65533; type of radio aficionado&#65533;s novel for kids, copyrighted 1922. Super condition. If you call yourself a diehard LA Dxer, your shack isn&#65533;t complete without this. $50.

5. SOUTH AMERICAN HANDBOOK: Very handy reference, and the historical stuff, of course, doesn&#65533;t age. Maps and geographic info make this classic a must-have. Save twenty bucks and buy a used copy! 1983 - $8. 1976 - $6.

6. BROADCASTING STNS OF THE WORLD (FBIS), BOOKS I & II, 1974. Nice condition, 500 pgs of data from the US govt&#65533;s listening posts. $10.

7. REVIEW OF INT&#65533;L BCSTG: 1983-84 Issues No. 75-87, $3.

8. GRAB BAG OF RADIO REFERENCE BOOKS: Japan&#65533;s &#65533;BCL&#65533; (date?); &#65533;DXing According to NASWA&#65533;; Radio Amateur&#65533;s Handbook 1973; The ARRL Antenna Book. Take &#65533;em all for only $12

9. DANISH SW CLUB INTL BULLETINS: 3/73 TO 7/80, three 3-inch binders chock full of info. Also, bulletins from the Finnish DX Club, 1967/68/71/72. Only $20 for all of it!

10. VINTAGE FRENDX!!!!!!! Saving the good stuff for the end, gang: A lonnnnnnng run of the monthly publication of the North American Shortwave Association, FRENDX, from Jan 1971 through May 1984! That&#65533;s 160 issues of nostalgia, news, radio information and feature articles, old names and faces, history of stations, etc. Virtually priceless! ..... but for you, the entire lot goes for $250, just a shade over a lousy buck-fifty an issue. You&#65533;ll never buy such great reading, so cheaply, again ! (Bonus: a free year of SPEEDX, just for fun.)

11. ANDES FOLKLORICO MUSIC ALBUMS!!!!!!!! Here&#65533;s a classic deal for the Latin DX specialists. Imported LP albums (get out your turntables!) from Ecuador, Peru and Bolivia, featuring that beautiful haunting music from the Andes. Finally, you can learn the different between a huayno and a passacalle! Special deal, assortments of 3 albums for $20, or 10 albums for $50. I have something like 50 albums to sell, so build up your collection now! Sorry, assortments will be as put together by me; no custom orders, please. I will try to make each lot as balanced a set as possible. Also, these are 20 years old and although look to be in tremendous condition, no guarantee that they will all play like new and some warping is probable on the discs.

IN ADDITION TO ALL PRICES ABOVE, BUYER PAYS SHIPPING/HANDLING.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label,

and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)
_____
25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local
oscillator crystal. However, a 10.245 MHz crystal is used

instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on

the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. If you wish to
purchase a new receiver with "Plectron-like" signaling
capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Hello,

I have a Power Design 6010D(digital display) power supply forsale. It is in
excellent working condition. The specifications: 0-60V, 0-1.5A, constant
current/constant voltage mode, digital display, overvoltage crowbar,
remote programming, and remote sensing. I am asking for $80 + UPS shipping.

If you are interested, please send an email to: yulius@ecn.purdue.edu

Best regards,

Aristo

Due to my fairly recent upgrade I am looking to purchase my first
base station rig.
After doing quite a bit of checking I have more or less narrowed
my choices down to either the ICOM 746 or the YEASU FT920.
I would appreciate any comments and can probably best check by
asking if either of the radios was offered to you for free,
which would you choose?

From: qwasty@hotmail.com
Message-ID: <7a4fgdmlu1@nnrp1.dejanews.com>
Source record: 116964

Thanks for the info, Gary. Right now I'm not really considering cost. I'll do that after I find out what the *best* is and I'll work down from there, but only if necessary. I can always build and ruggedize my own kit, they're all pretty cheap, especially if I opt for CW only. As far as travelling outside of the country goes, it is a disappointment that I wouldn't be able to explore anywhere I pleased but there's still plenty of land in North America. The Canadian military uses PRC-138's, so obviously the US government isn't too concerned about them stealing technology. I've always wanted to check out the Yukon. I've heard Alaska is better than Yellowstone in the summer. Anyway, if I wanted the radio bad enough, it wouldn't matter how much it was going to cost. I'd figure out a way to afford one. I'm unmarried, which makes it easier. Another thing to take into consideration is that I probably wouldn't be alone. Hence, the financial burden isn't all mine.

Power consumption would be a concern however. My travels would probably last several months rather than a few days or weeks. (Don't ask - you don't want to know, but I'll give you a hint: have you ever read Kon-Tiki by Thor Heyerdahl? hehe) So, I wouldn't be relying entirely on batteries by any means. It'd probably have to be solar or wind generated, with the radio being used intermittently or even rarely.

Another gent sent me an email about my questions. He mentioned the Harris 5800M- MP was capable of 1.6 - 470 Mhz, all mode. That'd be perfect for just about everything, including satellites. There aren't any details about any of Harris's radios on their website, and there isn't even a mention of that model of the Falcon-II. Hopefully my info pack will arrive next week or so.

Hi Guys,

The VX-1R was insured for $250. What can I expect after I have filed a
claim?
I have been told that it'll take months to get a check from them, and they
give you the royal run-around. Is this true?
Any and all info is greatly appreciated!!

I have just seen an advert for a Standard C710 tribander which quotes
a price in England that one normally pays for a 2m handie. Does
anyone know this beast? It seems to have 1W/1W/280mW output (280mW
on 1200 MHz) and runs on just 3 AAs but has available a 20W amplifier.
Sounds useful but suspiciously cheap.

1260. Field programming Bendix/King EPH 5990A VHF portable?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-14 00:00:00 UTC
From: Mike Beaty <mbeaty@nyx.net>
Message-ID: <919022872.712061@iris.nyx.net>
Source record: 116726

I recently acquired a Bendix/King EPH 5990A VHF portable. It is the predecessor to the current EPH 5102 series. From what I understand, it does not have the current narrow-band capability but it *is* DES capable. I don't want to use the DES capability.

I have the needed software and computer interface cables for it and can program frequency, CTCSS, and alpha indicator information with no difficulty. However, I'd like to be able to program it in the field as well.

I have the programming plug and can get it into what I assume is the normal programming mode. However, unlike my LPH portable, it first asks me for a KEY ID. I can't get past that point. I don't want to enter a valid key for fear that I'll get stuck encrypting/decrypting, which isn't what I want.

Anyone have one of these beasts or know how to field program one? I'd happily pay for copying and shipping costs of a programming manual. Or trade for one of my LPH or EMH manuals.

Posting here because it can do the 2-meter band and because much expertise seems to reside in this group.

Thanks in advance!

Mike

According to the Service Manual, the 13.8v pin on the "Tuner Control Socket" is connected directly to the power relay through the internal 4 amp fuse. I recall blowing that fuse several times while building a little box that connected to the ACC socket, so yes they must be the same 13.8v. But they are certainly connnected together by a long complex path which I'd rather not try to trace! Hope that helps.

FS/FT: President HR2600 10m transceiver (W/Mic/Mobile Bracket). This equipment is in like-new condition,never mobile and has only been in a nonsmoking environment. The radio has the HR2510 CPU installed and has the mod for the extra 11m band. It also has an end-of-transmission "K" beep which can be disabled by the RPT offset switch which is not needed with the HR2510 CPU due to losing the RPT offset function. I also have the original CPU which may be reinstalled to restore to original operation. This is a very nice radio in excellent condition. I do not need it due to other 10m equipment I own. The price is $200 shipped or trade for other equipment within my state of Maryland.
Gary (N5IXI) <catlink@erols.com>

USPS just lost a PRO 2006 I sold to someone and there are hoops necessary to collect the insurance. They will not accept a claim until 30 days after the shipping date. You will then need to get a form 1000 from your local post office. You will need to have a signed letter from the addressee stating that they did not get the item and finally proof of the value of the item. Shipping costs are not refunded.

I am in the middle of this process and have not found out how long til the person I sold it to gets his money. From here on out it is FedEx only, they are worth the extra money.

Greg

CW.

2 years ago, I owned a new TS-850 and TS-450 - the 850 was my fixed station rig and the 450 was mobile/portable. We spent Thanksgiving/Christmas in the Orlando area, and I experienced LARGE amounts of line noise due to many trees in the power lines. I bought a new TS-570D while there to counteract the noise level and absolutely LOVE the rig!

Upon return to our California QTH, I IMMEDIATELY sold both the 850 and 450, and am currently using the 570 as my sole rig - if a better fixed-station rig comes along, I will consider it.

For *my* money, all the features and sophistication of the 570, especially the DSP, absolutely ran circles around the 850 and 450 - and even the builtin antenna tuner is substantially better!

If I was in the market for a second rig today, it would absolutely be another 570!

Gary - KJ6Q

SG2020 For Sale
==========

This radio was purchased in May, 1998 for use at the
cottage. Since that time, I've used it briefly on 40 CW
at home and one cottage visit.

The radio is flawless due to its limited use, and that
is the reason for its sale. Original packing just as if
you had bought one from the dealer. I challenge anyone to
be able to tell the difference.

The radio puts out well in excess of its nominal 20 watt
rating.

I won't detail its features and specifications, for it
can be researched best at www.sgcworld.com

ROM version 1.04 and I will have it updated to the
latest ROM 1.05 as part of the purcase.

Price - $525 US shipped CONUS

Interesting comment. So the phase noise contributed by the two extra
conversion oscillators, and the noise figure degradation of two extra
mixer stages, make the receiver "quieter", eh? Fascinating. Totally
wrong, of course, but fascinating.

It couldn't possibly be that the two receivers have different gain distributions,
could it? It couldn't possibly be that one has a quieter DDS than the other,
could it? It couldn't possibly be that one has a DSP demodulator, could it?
It couldn't possibly be that the two radios have different AF response
shaping, could it? No, of course not, it must be the number of conversions.
So we'd have an even better receiver if it had 12 conversions, or perhaps 24
conversions, hell, why not a *thousand* conversions? Then it would be so
quiet we couldn't even hear it, right?

Wrong. Given equally good design, the receiver with the least number of
conversions has the least added noise and spurious products. That's why
direct conversion receivers can sound so good. So if we have a radio with
more conversions which still winds up being better *despite* that, then it
must be better designed in other areas to compensate for the extra noise
and spurious products introduced by the multiple conversions.

In fact, Icom is a leader in DDS design, and *despite* needing multiple
conversions to provide IF DSP, the IC746 has excellent gain distribution.
So *despite* the *extra noise* contributed by those extra conversions, it
still has excellent performance.

This myth of more conversions being better is as bad as the old myth
that the radio with the most tubes is better. It isn't necessarily so. The
quality of the design matters much more. If the quality of design is equal,
then the radio with the fewest conversions will have the least added
noise and spurious products.

You offered this radio a couple of weeks ago for $950 and said you had two of them for that price. You also said the radios were used for testing your products at your company. I sent you an email requesting what they were used for and you never responded. Now you are trying to sell them for $1250! What is going on here?

You HAVE to check out this file system for qsl cards. It beats keeping your cards in an old shoebox hands down!

This thing holds and displays 400 cards. It hangs on the wall and is really slick. At 25 bucks it's a steal. Whenever people see my cards displayed in this thing they are really impressed. I got one at the breezeshooters hamfest last year and paid over $40 dollars.

I have no financial interest in this guys operation at all. If you QSL, you HAVE to look at this!

Hi,
I am looking for an older 2 meter all mode radio. Base or mobile would be fine. Will consider equipment like the Kenwood TS-700 or whatever you have. The main consideration is that it is operational on all modes and that the price is reasonable.
If you have something like this that you are looking to move, please email me with details and price.

The MP and the 746 are Triple conversion; they throw the
fourth stage in for the IF DSP, and I really don't consider that
a true conversion, especially if the DSP is off, Course thats
just symantics. Apparently you didn't read Gary's post, he said
that if the reciever is fundamentally better, then THAT is the reason
why a dual conversion sucks compared to quadruple conversion; only
because the radios where dual conversion is found in, they are
typically in a lower price class, so they're not as fundamentally
robust. I do believe you are right in saying that the more
conversions, the better the selectivity is. That doesn't mean
your going to get a quieter reciever though, the only reason it
happens with todays riceboxes is because of the way the
cards fall. Cheaper radios simply will not have the robust circuitry
that the big dogs have.... thats why this "phenomena" occurs.

>Some Rigs with double conversions...
>1. TS120
>2. TS 140
>3. FT 890

>3 and 4 stage receivers in their mid to higher end radios. Name one radio
>{solid state receiver} that uses double conversion that is well known for
>its receivers selectivity?
>

You had to mention all the bad ones... only one out of that list thats really good is the FT-890. Now, THAT, is an idea of a well built double conversion reciever. And really, for everyday use, the 890 is a wonderful radio. I'm sure under "contest" conditions its not as good as the big dogs, but it has more than enough rejection for most applications. I think the same thing probably holds true to the 920....

I think the 920 is a decent radio, aside from the fact that the look and feel of the radio all screams towards "CHEAP". It is definitely not an FT-990 replacement, in the ergonomics/styling department.

The bottom line is, that the final decision in choosing the radio lies in the operators individual tastes more than anything else. For all we know the FT-920 may be the best dual conversion reciever on earth, but if I listen to it and I just dont like the way it sounds to my ear, then I will condemn it to damnation, and choose another radio, due to my personal preference. It's always imporant to sit down and USE THE RIG (either at a store display, or better yet, a fellow operator's shack) before you buy. You may find that "good specs" dont always mean a radio that you will like. Then there are

opinions all over the place. I have a TS-850. I've heard guys say the radio sounds like a cement mixer in terms of phase noise. But you know what? I like the radio, and it suits me well. I think its a good piece of equipment. I mean sure, there are radios that are much better than others and the differences are blatantly obvious, but in most cases opinion ends up being 25% actual radio construction and 75% operator bias when someone tells you how good or bad a radio is.

-Mike

1294. specs database

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-14 00:00:00 UTC
From: Hamish Moffatt <hamish@rising.com.au>
Message-ID: <7a6grh$pp0$1@arachne.labyrinth.net.au>
Source record: 116778

Does something like a radio specs database exist on the web?
I've been looking through some ads and have no idea what some of the radios
actually are. For example, an FT901DM and an FT212RH -- searches for these
on the web have shown up nothing, I can't get to yaesu's web site, and
most of the manufacturers have no information on obselete radios online
anyway.

Interesting specs would be: age, band(s), power needs (12V or 110/240V),
and power output.

thanks,
Hamish

I had one that did the same thing and I did the mod reset(hold down
both up and down arrow while turning the radio on) also you might have
to do a cpu reset. Hold down the vfo and mr and 2 key while turning on
the radio.
AFTER that put in a freq. out of band on the left side in the 440 range,
like 462.5625. after a while of putting in out of band freq on the left
side it started working again. Dont ask me why but it did... Its worth a
try anyway.

1320. FS: WA4DSY 56k modem and PackeTwin card, $420

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-14 00:00:00 UTC
From: qwasty@hotmail.com
Message-ID: <7a71lpmoq1@nnrp1.dejanews.com>
Source record: 116804

I bought a WA4DSY 56k modem and PackeTwin card last summer and I have never used them. The PackeTwin card has never been installed into a PC and the WA4DSY 56Kbps modem has never been powered up. They are both brand-spankin' new, from Paccomm. You can see photos and info about them at http://www.paccomm.com the PackeTwin card is capable of doing 2Mbps if you can find or build a modem that is that fast. It's great for hi speed microwave data or digital video and such. I have all the original packaging, manuals, shipping containers etc. I haven't checked on this to be sure, but you may have to get a different protocol IC from Paccomm for their PackeTwin card in order to interface it with the WA4DSY modem. You also will need transverters for the modem to your preferred operating frequency.

Not including shipping, I paid $350 for the modem and $250 for the PackeTwin for a total of $600. The reason I am selling these units is because I am a college student and I don't have the time it takes to get these things running. On top of that, there's almost nobody in Utah (that I know of) with similar equipment. So, what good is it if there's nobody to link to?

I'd like to sell them together if possible. They are worth $600 together, I will sell them for $420. I'll ship them when your check/money order clears my bank. If you have questions, send me an email or something. My nick is badon on EFnet (IRC) if you want to chat.

Thats the way the cards fall? Ok..The fact that ALL the high end rigs are mostly quadruple conversion {ok a few technically triple} and have wonderful receivers is just luck ? And each companies top of the line rig is quad conversion has nothing to do with its receivers performance ? I can see we will never agree here but thats ok. I guess thats where "theory" applies :O) .

NOPE....although you are on the right track....
WSQL needs to be set to 0

The correct selection is #32, RMOD.
Probably you will find it set to W-FM.
Rotate the knob so that the display says N-FM.
Save the setting, and you should solve it.
OTOH, if you WANT the unit to RX wide-fm in that frequency range, then you
SHOULD reset #30-but the W-FM performance will suffer, as the 50 has a
rough time breaking squelch on W-FM.

Most manufacturers *barely* have information on *current* radios! What the hell is wrong with all of these companies? they spend millions making sophisticated equipment but they can't pay some geek high-school student 10 bucks an hour to scan a few extra pics, add a few reviews, and maybe a PDF of the manual!!! So far, the best manufacturer in this regard is SGC (I hear their radios suck tho), and second best is Kenwood. The rest just don't care whether you buy their stuff or not, apparently. And so far, NONE, I repeat, nobody gives a flying fuck what happens to you or your radios, AFTER they sell it to you. A good manufacturer would go out of their way to make sure that their stuff gets the highest prices on rec.radio.swap simply because it's a sign of professionalism. Car manufacturers are always trying to claim that their stuff is so much better than the rest that they always sell for the highest prices years after the original owner trades it in. If an old radio sells for a consistently high price, it suggests the former owners aren't selling them because they're junk! If they don't have info on their older models, obviously they don't care. My next radio is not going to be a kenwood, yaesu, or an icom if I can find something better.

Source record: 116816

Where would I buy such? The local dealers don't carry it, and the Alinco website has no 'provisions' for ordering it.
The thing, if it's what I think it is (I have a similar 'device' on another radio) picks up your voice thru your ear.. Works great for bicycling, since the wind-noise isn't picked up by it.. Something the Alinco's built-in mic seems to prefer over voice...

Thanks!

PS. The part #'s EME-17, and the webpage says that an EDS-7 (no idea what that is) is required...
There might be some dealer reading this, that happens to have it in stock...
:)

> four of them!
{text deleted]

I bought 20 used 811As at a flea market a couple of years ago for $5.
Several had holes in the plates and were discarded; I tested the remainder
for emission and found 8 of them usable. Four of these are now in my 30L-1
at full output.

The 811A is a nice cheap tube, but you can't abuse them by holding the
key down for more than about 5 seconds while tuning up at full plate
voltage.

1342. FS: Radio Shack HT Freq Counter

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-14 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <7a5fj4$2to$5@clarknet.clark.net>
Source record: 116857

Hello. I have a Radio Shack Handheld Frequency Counter for sale at $55 shipped. It's exactly like the new HT Frequency counter that RS has now. It's in excellent working and excellent cosmetic condition and has very little use on it. Let me know if your interested. Here's all of the information on it:

-Covers Every Frequency From 1-1300 MHz
-Reads Up To 4 Spaces To The Right Of The Decimal
-Will Pick Up Transmissions On AM/FM/CW
-Selectable Bellow Or Above 50 MHz
-Slow/Fast Gate Speed Selectable
-Has Back Light Switch Also
-Includes Batteries, Telescopic Antenna, Original Box, Original Packaging, and Original Manual

Will trade for a 20 amp or higher DC power supply, any Kenwood HF accessories, or an All Mode (AM/FM/SSB/CW/RTTY) base frequency counter. Or if you have anything else let me know. Thanks for reading.

Hello. I have a MFJ-862 144/220/440 cross-needle 300w SWR/Watt meter for sale. New cost is $50 plus shipping. My price is $35 shipped. It's in excellent working and excellent cosmetic condition and has very little use on it. Let me know if interested. Here's all of the information on it:

-30w/300w Switch
-Works On 144/220/440 Ham Bands
-Measures SWR And Wattage
-Add A 12v DC Power Cord To Light The Meter
-Includes Original Manual, Box, And Original Packaging

Will trade for a 20 amp or higher DC power supply, any Kenwood HF accessories, or an All Mode (AM/FM/SSB/CW/RTTY) base frequency counter. Or if you have anything else let me know. Thanks for reading.

> Prefer at least 4 watts on UHF, that use alkaline batteries. Thanks.

Most modern HTs will use alkaline batteries...their manufacturers offer
"alkaline battery trays" that you can stuff with whatever cells you desire.

Yours is an uncommon requirement...why the need for alkalines only?

FS/FT: President HR2600 10m transceiver. This equipment is in like-new condition,never mobile and has only been in a nonsmoking environment. The radio has the HR2510 CPU installed and has the mod for the extra 11m band. It also has an end-of-transmission "K" beep which can be disabled by the RPT offset switch which is not needed with the HR2510 CPU due to losing the RPT offset function. I also have the original CPU which may be reinstalled to restore to original operation. This is a very nice radio in excellent condition. I do not need it due to other 10m equipment I own. The price is $250 shipped or trade for other equipment within my state of Maryland.

I've had both a Kenwood TS-430S and and Icom IC-751A as my base rig.
Hands down, the Icom is the better rig, in both SSB and CW modes.
Seems to have a better receiver, and get excellent reports on my
transmitted audio.

Can anyone tell me please what scanning capabilities the Kenwood TM-G707E has? The magazine adverts and Kenwood's web site don't say, as far as I can tell. I'm wondering whether it would allow me to set up "banks" of channels with a mixture of 2m and 70cm channels in each bank so that I can scan any of:

1) Local repeaters on 2m and 70cm plus both calling channels.
2) All repeaters on 2m and 70cm plus both calling channels.
3) As option 2 but also all simplex channels on both 2m and 70cm.
4) Just the calling channels on 2m and 70cm.

Depending on where I am and what mood I'm in I'd like to be able to select any of the 4 scenarios above *without* having to reprogram the memories. I can do this with my MVT7100 handheld scanner, but I'd like to be able to do it with a transceiver so that I don't have to carry the scanner around.

Is there any other mobile dual-band radio with remote-mountable head that has better than basic scanning abilities? I currently use an ICOM IC207H, which is a very nice radio, but that has only very simple scanning options.

Cheers,

Mark.

1369. Wanted: Police motorcycle radios

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-15 00:00:00 UTC
From: Mark Masa <mark@kelltech.com>
Message-ID: <36C89A23.919DCD5B@kelltech.com>
Source record: 116635

I am interested in police motorcycle radios, literature and schematics.
I am especially interested in ANYTHING 20 years old or older, especially
units with tubes. Most units were made by RCA, Motorola and Link
Vetric. If you have any items for sale or even if you have information
as to which units were used on police motorcycles, I would like to hear
from you.
Thanks
Mark

Source record: 116639

There used to be a device called the QSYer made by Stone Mountain Engineering of that town down in Georgia. No longer in business.

Too bad - the QSYer is just what is needed for these little rigs. It is a telephone keypad with a processor and eprom that sends a serial signal to the rig's CPU.

Wish I had the knowledge to design something like it. How about some of you wizards working up a starting point. I'd be happy to assist. I think there is a good profit potential here.

i don't think so...

51 was used for a wide variety of receivers (such as 51RV being an aircraft nav receiver...)

i don't know if you can get to the equipment type listing from the outside..start at http://www.collins.rockwell.com and see if there's an entry for that. (or check the publications indexes that are available from there...)

skywaves@bw.webex.net wrote in message <7a88kd$m12$1@nnrp1.dejanews.com>...

I have an absolutely mint, complete Yaesu HF rig.

I. HF-101EE Transceiver
Still has the plastic on front.
2. YC-601B Digital Display
3. FV- 101 External VFO
4. Phone Patch - Landliner\Speaker
5. 1 set of extras finals

This rig has been in storage and has seen little use. The 101 is still
in the original box with original packing.

The transceiver was bought from Webster Radio in Fresno, Calif.
I have the owners manuals and the service manual for the 101in mint
condition.

I want to see it put to use by a new ham or someone who knows and
respects the 101 line.

KB5XE

Will NOT separate. price: $575.00 plus Shipping

Message-ID: <7a8n92$4e3$1@inf2.informatik.uni-stuttgart.de>
Source record: 116672

The Icom IC-31 (not W31!) is a crystal-based transceiver for 70 cm. It looks as if it were built in the mid-70ies. That radio should be nice for paked radio. However, I am lacking any dcoumentation and I couldn't get anything here in DL. It seems as if the IC 31 were not sold in Europe.

Does anyone have a schematic and a manual for that trx and would send my a copy (of course, I'll pay costs) ?

Mni tnx & 73,

Wolfgang DJ3TZ

> whether you buy their stuff or not, apparently. And so far, NONE, I repeat,
> nobody gives a flying fuck what happens to you or your radios, AFTER they

It's true that there is very little information on the net from manufacturers
about obselete models, which is why I asked about a specs database.
Kenwood do have some information but specs are still hard to come by.

I ordered user and serivce manuals for an old Yaesu handheld from their
service department by email with no problem at all, too. Service is available.

If no such database exists, I am interested in creating one.
Would anyone find this useful? Would people contribute radio info to it?
All I have myself is an IC-726 and an FT-411; doesn't make for much of a db!

Hamish

Source record: 116682

Thanks, Paul. Another gentleman also emailed me about icmfg. I'll give them a call but I'm not sure of the terminology of the specific components involved. The crystal (I assume I can figure out the case style number from their docs) is housed in a cartridge with active discreet components (xistor, resistors, potentiometer, etc). What is this element called? Is that the TCXO?

73 de Dan

Paul Plants wrote in message ...
www.icmfg.com This is where we buy all the crystals for our repeaters. They are all RCA 500, 300,and 1000.
I just received the tcxo for the 442.125 repeater a RCA 500.
BTW: The 1000 and 500 use the same tcxo and crystal.

Be very careful while using the the 13.8 volt pin. Normally Icom doesn't

provide fuse protection. A short to ground can damage the PCB or the
wire harness.

Message-ID: <36C8427E.7BD7@thegrid.net>
Source record: 116687

Of the Icom 746 vs Icom 756 vs Yeasu FT920, which has the most
effective noise blanker and DSP?
Are any differences large?
Does the ICOM 746 have a more effective noise blanker and DSP than
the ICOM 706 MKII?
I am especially interested in 6M performance.

7-12 GHz Low Noise Amp by Watkins-Johnson

Model number WJ-297-5. This unit provides about 30 dB gain across the entire 7-12 GHz range, nicely covering the 10 GHz ham band. It is based on a Traveling Wave Tube (TWT). Self-contained power supply. Power requirements are 110VAC at 7 watts. Thanks.

bidding ends 2/17 @ 17:04 PST

I think that 300 memories is academic. What is needed on ALL rigs is a way of entering the memory number direcly without having to rotate a dial through so many memory steps to get where you want to go. THAT is the deficiciency on my ICOM and my KENWOOD. I only use about twenty maximum 'cos it's too much of a nuisance to dial any further. I just enter the frequency I need on the number pad, it's faster.

>manufacturer solders their battery packs.

You may have a problem here. If you look at any manufacturer-assembled battery pack, you will find that the conductor strips are *welded*, not soldered, to the cells. The end connections may be soldered, but they are soldered to tabs that are welded to the cells, not to the cell caps themselves.

The reason for this is that soldering heat can damage the plastic or rubber seals on the cells. The welding is done very rapidly by a spot welder, and doesn't heat the cell significantly.

Soldering directly to the cell is unlikely to explode it, since the heat is still pretty localized unlike throwing the cell into a fire. But it may damage the seal, and you may find your cells leaking.

(I found this out the hard way).

Dave

1413. Re: Hamfest NIMH Batteries

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-15 00:00:00 UTC
From: Dave Edwards <ham@cybercomm.net>
Message-ID: <7a9n32jdd1@ostrich.cybercomm.net>
Source record: 116700

They were probably meant to be assembled in a
battery 'pack'.
They are not soldered, but have tabs 'tack welded' to
them which are soldered to.
Not exactly sure, but the tack welding is a zapping process where
no heat is built up. I don't think it was a great idea to be
soldering to a NiMH battery directly.

I MUST sell this asap -- best offer takes this beautiful
classic telescope. An EXCELLENT value for someone who wants
a classic, top quality scope.
Contact me at 732-949-0664 or via e-mail.

Original ad follows:

FORSALE -- TINSLEY LABS CLASSICAL CASSEGRAIN TELESCOPE !!!

I have for sale a Tinsley Labs 8-inch Classical Cassegrain
telescope, complete with the original German equitorial
mount and clock drive. Tinsley produced these fine scopes
in the mid 1960s and are known for their fine optical and
mechanical properties. They were (are) research quality
instruments which are quite rare and retain their value.

In mint shape, they go for around $3000. The one that
I have is in very good condition, but needs a few minor
items to bring it to "mint", as follows:

- mirrors are excellent, no scratches or chips, and
bright. Although very good and workable, a
recoating would make them mint.

- clock drive needs an external 12V battery pack and
rheostat to make it operational (this is as it was
intended). A nicad pack or motorcycle battery would
be appropriate.

- A low tripod or pedestal base (about 20" high) and
"rocker box" is needed for the equitorial mount to
sit on.

- the optical tube has some scratches in the paint and
a small dent, which absolutely does NOT interfere with
the optical path. Paint scheme is the original Tinsley
gray.

Thats about it. I just don't have the time to use this
scope and it's too valuable to just let it lay idle.

I'm was asking $2150. for scope and mount (and absolutely will
NOT sell them separately) but am open to any reasonable
offers. Please, I must

find a good home for this; make a bid!

The equipment is located in Monmouth County, NJ. For
further information, please contact me.

Thanks,

Joe Levantino

I am interested in a possible trade here. I would really like to get one of these new Icom tri-band HT's. But money is rather tight right now. So, I would like to offer this in trade. I have FT530 in great condition. I am a non-smoker. You MUST see this HT to see how clean it is, and how nice the shape is in. No scratches or problems at all. I have all boxes, docs. etc. and the following accessories :

1/ Yaesu tech. manual [not a photo copy]. 2/ Yaesu MH-29 display / speaker mic. [cord not stretched to hell]. 3/ Yaesu YH-2 vox head set [clean]. 4/ Yaesu FNB-26 1000Ma. batt. [in box never been charged] . 5/ (2) Yaesu FNB-25 600Ma.batts. [one has been repacked with new, Yaesu ni.-cads.] ...all excellent condition 6/ DC. 12 volt cable. 7/ Packet control cable wired for AEA.-PK232 MBX.. 8/ New Yaesu replacement rubber duck antenna, [the original duck antennas Yaesu supplied would not resonate worth anything on 70cm. band ?] 9/ 800 Mhz. mod. w/MARS/CAP mod [done by dealer] . This hand held was mostly used in the house on packet... I may also have a BRAND new Quick charger for the FNB series batteries, AND a Mr.NiCD 7.2V 1500mAh nickel metal hydride pack to go with it. They are only 2 weeks old! With receipts...! For now it is sold here locally, but if that doesn't work out I'll throw it in also!

Please let me know if you may be interested. Please E-Mail me at one of the addresses below and then we can get together from there. I would sell it all together for $355 (shipping included to CONUS) but I do not want to separate any of it.

1423. FORSALE - MINT Kenwood TS-520S w/CW filter, mic, MFJ tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-15 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <7aa0sj$5gg@nntpa.cb.lucent.com>
Source record: 116710
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S that I would like to sell.
In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option). Also included
is the Kenwood hand mic and (if you need it) an
MFJ antenna tuner (I forgot model no - older unit
but works fine).

The price is $350 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

1437. Hamfest NIMH Batteries

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-15 00:00:00 UTC
From: brianburke@my-dejanews.com
Message-ID: <7a9fankac1@nnrp1.dejanews.com>
Source record: 116755

At the St Charles, MO Winterfest, I found a vendor selling NiMH AA batteries for $1.25 each. Wow! I found a small problem when I got home, however. The positive side of the battery is missing the "button" that makes contact with your battery holder. Perhaps these were meant to have the tabs, but never got that far in the manufacturing process. I dunno. I searched the house for something to solder on the battery in place of the tabs. I settled on some really small steel washers. While attempting the soldering job, the steel washers weren't sticking, and at that point decided to go with just a blob of solder. A 25 watt slodering iron is plenty, and I kept the warning in the back of my mind (battery can explode, leak, or catch fire if heated or exposed to fire or high temperatures...). No big deal since every manufacturer solders their battery packs. I had to do it a second time as the first pass with the solder wasn't high enough to make good mechanical contact in by battery holders. Also, be sure to use a file and expose the lead on the tip of your solder blob. I was using some really nice Heathkit solder and it left a rosin coating on my solder blobs which wouldn't make good electrical contact.

They were green cased, generic-like, with the following info:
Size AA, 1.2V
DHAA120
nickel metal hydride rechargeable battery
Caution: battery can explode...
Made in Japan
Duracell, Inc.

73,
Brian/N0iMD

1442. Which HF Rig in this price range??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-15 00:00:00 UTC
From: ny4t@home.com
Message-ID: <36c8841b.86284646@news.nash1.tn.home.com>
Source record: 116760

OK, here is the question. I plan on buying an HF rig in the next couple of months. I will probably have about $900 to spend. I will be using the rig primarily for contesting, about 75% phone and 25% CW. I already own a Kenwood TS450SAT which I am very happy with.
So, I need to narrow my choices. I am leaning toward a mid-range used rigs with only a few years on it. Here is what I have found I can get in this price range. I need opinions onthe advantages and disadvantages of the rigs for the type of use I will have and any personal opinions on which rig you would choose. An automatic tuner is an absolute requirement. Speed and ease of use are as well.

Another TS450SAT, with accessories for this price
Yaesu FT 767
Kenwood TS940
Kenwood TS570D
Icom 751a
Yaesu FT890
Ten-Tec Omni V
Kenwood TS690
Others???

Thanks in advance es 73,
Lee (NY4T)

1447. Re: VX-5R CTCSS problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-15 00:00:00 UTC
From: cc13125@cedarnet.org
Message-ID: <36caa113.29839456@news.cfu-cybernet.net>
Source record: 116765

Errrr..... BUZZ! WRONG !

My VX-5R (and the next serial numbered unit owned by a friend) has horrible PL decode time, regardless of whether a PTT cycle was just finished or scanning or just sitting on a frequency (with the battery saver disabled, of course).

Now, if these two units are out of the norm forgive my rudeness (above)... but my experiences with PL decode times approaching 1000ms (1 second) is explained by Yaesu using the main CPU for PL decoding and explains the scan/decode problem that everyone discusses.

The FT-50, FT-51, any number of Standard, Icom, GE, Motorola and Kenwood handhelds have varying delays in decoding a PL tone, but none are anywhere as poor as the VX-5R.

Source record: 116767

I have a 767 and yes, it did have the wobble. So I went and bought a new digital encoder (or whatever it is called) and installed it, quite easy. BUT, even as new it still has a small wobble, which tells me that the dial knob is just too heavy for the mechanism that supports it. I have not seen this as only a 767 problem, I have seen 757s with mega-wobbles. I have also heard some story that Yaesu made these encoders with an aluminium bearing, which was too soft and then later made it from brass which was a bit better. Anyway, if you are going to replace the thing it will set you back about 60 US.

1457. Re: Icom 746 vs Icom 756 vs Yeasu FT920

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-16 00:00:00 UTC
From: "John D. Adamson" <john@jnadamson.mv.com>
Message-ID: <36CA3247.84C3AD98@jnadamson.mv.com>
Source record: 116526

I own a 920 and it is super on all bands. Six works just fine
and with the built in ant tuner on all bands.

I have the narrow filter and the fm unit and have fun with both
6 and 10 mtr repeters.

To each their own, but this is the first new (last year for me) rig
I have had in > 10 years and it was worth the wait.

I need the manual or schematic for a Lunar Electronics 2M10-80P amplifier.
This is a 10 watt in/80 watt out amplifier with a receive preamp. I'll
cover Xerox and postage, whatever is fair.

Tnx

N5LB

I have an IC-281H in very good shape. It has the programmable hand mic, all factory options (including the voice talk-back of freq., etc.) It is missing the screws for securing the set to the mobile mount (I just can't find the suckers). Sure new ones can be had from ICOM or other supplier.

Asking $225 U.S., OBO. I would also trade for QRP or working military gear. Email at n7gsu@qsl.net

Source record: 116577

I have done just what you want to do for a friend. I used a
Belden shielded cable for the extention and crimped on the
modular connector. The cable was 10 conductor (5 twisted
pairs) with shield about 20 feet. I used two of the extra
conductors to run the speaker output along with it. There
was no problem with running them together. I mounted a cat5
jack in an old AT&T speaker phone speaker that I had gutted.
He uses it for doing the Free Press Marathon Run and such.
Sets up a table next to his truck under an umbrella and it
worked just fine. I made him promise not to tell anybody
where he got it!!! If you would like I can get you the Belden
cable number or even send you a chunk for postage.

1483. TM241A Display problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-16 00:00:00 UTC
From: Jeff Schmidt <rsja60@email.sps.mot.com>
Message-ID: <36C98685.901AF65F@email.sps.mot.com>
Source record: 116585

All,
Anyone know of a fix for a wacky display on the TM241A?

I have a Kenwood TM241A I'm trying to fix. It works FB except for an aggravating symptom in the LCD display. Occasionally, all pixels will show up on screen. The rig still knows what VFO freq/mem channel it's on, but the display does not change. VFO and main reset correct the problem but not for long. Owner says it's been like that for quite a while. I have yet to go in and look at the backup cell, etc, but thought I'd knock it around here first. Maybe Kenwood has a service bulletin for latch-up protecting the display IC? Thanks, N5MNW Jeff

P.S. it's not the "ENJOY HOBBY" feature seen on the TM732A.

Actually Bill, when I think about it, the newer Y I K rigs can all be software controlled so maybe quick entry of the memory cells (along with an identifier for that cell) could be easily done via the hamshack computer.

First off, as far as I know of, the ADi AT-600 is a FM only radio. It might have the AM recieve, but, as such, it won't do CW like I think you might like it to do. [You can build a CW "box" to do CW over FM, but it's not true CW; this sort of thing is done by people wanting to just practice.]

Some questions to ask yourself about this up and coming purchase: What will you use this radio mostly for? Do you have a need for 70cm? What bands are you really interested in? You can buy a single band radio for less; and there are other manufacturors out there.

I faced the same problem you did, still do today. I bought a FT-50, the 5W version, which I really liked, but even as a good radio, I wound up wanting more after buying it. Like, better antennas, more power, etc. If you plan on using your radio for several purposes, ie, as the HT it is, and also as a mobile radio (with an antenna on the car, and an atenna in the house), get one with a BNC on it. [The 600 does have this; the 50 does not.] I say this because I think it swaps connectors much better than the sma does. [the sma connector is the screw-on kind.]

Also, I found that 5W only eats up batteries; better to stick with the 2.5W version [I think the batteries have more capacity to them, and will last longer.] Get the alkaline battery pack also.

You want to do packet also? Do you already have the stuff needed to do packet? I don't even know what yet is needed to do that, but I do know you need a TNC and a computer. Someone else can address this need.

Finally, I hope you are involved with a club of some sort or another. The help from one can be priceless. I know that it was with the help of some friends that I was able to build my first HT accessory--the

infamous twin-lead J-pole antenna.

My recommendations: buy a lower cost radio. Sure, it might not be as fancy, but I think you will find that you want to do some other things, get on some other bands using some other radios, etc. Spend slowly, don't buy impulsively. I've done that before; I've paid the price too.

Hope you enjoy whatever radio you do get!

1486. Kenwood TS570D experience

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-16 00:00:00 UTC
From: Edward Legenza <n6xa@email.msn.com>
Message-ID: <#3fkv0cW#GA.285@upnetnews03>
Source record: 116588

A couple of time, I have responded to people asking for experience/advice on the KWD 570 series. Mostly my response has been positive. However, a recent experience leaves me dumbfounded.

Having purchased, and re-wired a older Kenwood MC50 desk microphone to go with this rig, I was initially a bit disappointed that the mic did not have enough gain even when the "mic" gain on the rig was set to maximum (scale on display goes up to 100 when front panel "mic" button is activated). What really amazed me, is that wether I set the mic gain for 10 or 100 it seemed to make no difference in the mics sensitivity.

Guess what, after carefully reading the manual, it turns out that the "processor" feature of this transceiver must be turned off for the "mic" adjustment to have any effect. If the processor is on, you can adjust the mic gain in the display, but it has no effect. If the processor is off, the mic gain can really be adjusted and then the processor re-activated.

Well bother that, a display that lies from Kenwood. The MC50 has plenty of gain now, but just had to share this humorous experience with all.

Wonder if the "G" upgrade is more honest?

Perhaps this feature has been with Kenwood for long time. In TS-850, when
speech compression is on, mic-gain functions as post-processor gain, i.e.,
when it is low the power output is low.

Hi! I'd like to pick up a copy of the manual for the Mirage A1015 6M amp. This is not the new, A-1015G flavor, but the old, original A-1015 (with just a power switch and preamp switch on the front). In lieu of that, the pinout for the accessory connector on the back would be a great help.

I've already checked with several of the "Vintage Manuals" shops, with no luck.

Thanks,

Paul WD8DKY

Tony,
It turns out I got an "athoritative" response from Kenwood, which
is:

Sorry, the only MARS CAP modifications we have for the TS-140S is to allow you
to transmit and receive from .5 - 30 MHz. We know of no TX/RX mod to go
out of this range.

Hello Jeff, that is a common problem on the 241 kenwood.
The display is plugged in to a circut board inside the radio and that
plug gets grung and oxidation on it. You will have to take the radio
apart and unplug the display from the circutboard and clean the plug and
reinstall.
Good Luck.

I have a mint Kenwood TS-520S that I would like to sell.
In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option). Also included
is the Kenwood hand mic and (if you need it) an
MFJ antenna tuner (I forgot model no - older unit
but works fine).

The price is $350 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

Surely not at the same time?

Incidentally, I found a '9-Pin Miniature Tall Test Socket Adapter'
Model 1449 by Pomona Electronics of Calif. It extends the valve base
of an awkwardly placed B9A valve base out by 5.5cms with a base on
top for the valve and nine tags to connect instruments to for
measurements. Do you want it?

1511. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7actgb$r7j@news.Hawaii.Edu>
Source record: 116613
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, WH6U, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your

article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Jim:
Could you please tell me why so many TS-570xx tranceivers are showing up for swap? I'm not interested in purchasing one as I am very satisfied with my TS-450S, just curious.

Also, I noticed on your web site that you have a IC-281H for sale. Do you know were I can find an image of this radio. I had an IC-271H, is this similar with 440 receive?

Thanks for your responses.

Gentlemen:

I have a mint condition Kenwood digital VFO. This unit is in the original box w/instructions. I've used it on my TS-130S and it is functioning perfectly. This unit is directly compatible with the 120, 130, 520, & 830. It can be used with other Kenwoods if you care to replace the connector.

I wish to trade for a 6 meter all-mode transceiver.

Thanks for reading

Roy

It probably tunes there but the phase lock loop probably does not have very much range to it. Doubt the front end will cover the large range either.

I seem to remember reading somewhere that there was a way to program a Yaesu FT-50R to work in FM 'narrow split' mode (15 kc channel spacing), as is used in Europe. I think that this option, when enabled, mostly amounted to reducing deviation of transmitted audio.

Does anyone know anything about this, or am I in outer space here..?

Thanks in advance -

- Seth N6BMB

What are your experiances with this radio? Is it a good radio or should I spend my money on something else? As a 15 year old, my funds are not necessarily what one would describe as plentiful (~$300), and this radio appears to have a good mix of features for the price. My intended uses are voice, packet and maybe some CW. Is this radio capable of doing packet or CW? Any opinions would be appreciated.

1527. Re: NRD-525 v.s. ICOM R-71A

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-16 00:00:00 UTC
From: Mark Bryant <bryant@sohobusiness.com>
Message-ID: <01be595d$c3f50d40$a43a56d1@nimitz>
Source record: 116658

I have several years use of both the 525 and R71A and have found the 525 to be better across the board, both stock and stacked with KIWA filters. Both radios have a reputation for "wooly audio" but that should not manifest itself on SSB or CW. Service for the NRD is very easy at Universal Radio, Sherwood Eng and KIWA for both tuning and custom work.

Good luck

Mark Bryant

From: yulius@shay.ecn.purdue.edu
Message-ID: <7aau1rqur1@mozo.cc.purdue.edu>
Source record: 116662

Hello,

I have a B&K Precision 520B Transistor Tester forsale. It can test NPN/PNP/FET
in and out circuits. It can also determine whether the transistor is NPN/PNP,
determine B,E,C leads, identify if the transistor is Silicon or Germanium,
measure leakage current. The tester is in excellent working condition
and coming with complete manuals and test leads.

I am asking for $110.00(shipped). If interested, please send email to
yulius@ecn.purdue.edu

Best regards,

Aristo Yulius

1533. FS: RCA TT-3 Transmitting Tube Manual

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-16 00:00:00 UTC
From: yulius@shay.ecn.purdue.edu
Message-ID: <7ab02c$s3v$1@mozo.cc.purdue.edu>
Source record: 116664

Hello,

I have a RCA Transmitting Tube Manual TT-3 forsale. The manual is a very
good source for tubes related audio and radio design. The manual is in
very good condition. The pages are complete and no loose page in the manual.
I am asking for $20(shipped).

If you are interested, please send an email to: yulius@ecn.purdue.edu

Best regards,

Aristo

1534. FS: Hallicrafters SX-28 Super Skyrider

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-16 00:00:00 UTC
From: jwudgy@no.spam.for.me.please
Message-ID: <36c90587.16877146@news.tdsnet.com>
Source record: 116665

I'm selling my personal Hallicrafters SX-28 Super Skyrider. I am neither a dealer nor am I selling this as a broker. I've owned it since 1962 and it is in great condition--a table radio with the full metal case and not a rack mount radio. I've posted several pictures of it on the auction page. I'm selling it because my XYL and I are building a new home and there just won't be room for it--or an antenna. Bummer.

You can find it at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&Item=67741617

The auction started on Monday night, Feb. 15 at about 10:30 p.m.; it ends on Monday night, Feb. 22 at the same time.

The SX-28 is a great historical radio. If you've ever been to the Harry S Truman library complex in Kansas City, MO, they have a life size replica of the oval office as it was in Harry's time. Right there behind the President's chair is a perfect SX-28. This was THE radio during World War II and thereafter.

Thanks for taking a peek.

1538. Yaesu FT-530 batteries needed.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-16 00:00:00 UTC
From: Ken Page <vk4akp@usa.net>
Message-ID: <01be58b7$fef0b580$e0ce6ccb@default>
Source record: 116669

Giday! Can anyone tell me the cheapest place to get replacement batteries
for my Yaesu FT-530 Dual Band hand held? I have tried here in Australia
with no luck.

I have two unit's and the batteries on both have died. :(
They are, FNB-26, 7.2v 1000mAh NI-CD.

I would be interested in cheap re-pack techniques (These batteries have a
moulded case, IE no screws) :(. But only Ni-CD cell's as I believe in slow
charging and want to get a long life out of the replacements. Ni-Mi's &
Li-Ion's tend to have a cycle life of only 500 cycles.. :(

Are complete replacement unit's available at a reasonable price?
7.2v packs?
12v packs?
Dry cell packs?
DC leads?
knob's for the top of the unit. (Mine are rubber and are falling apart!) :(

Other than the sealed batteries being hard to re-pack. I have been very
happy with these unit's and wouldn't even consider the new HT's.

Any help appreciated.
73's de VK4AKP (Ken).

1541. Re: Kenwood TS-140S 45-60 MHz TX? NOT POSSIBLE

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-17 00:00:00 UTC
From: wd0fkc@dailypost.com
Message-ID: <yHLy2.9619$Vz3.71998603@WReNphoon1>
Source record: 116422

Hi Tony,

The reason for the TS-140S indicating dots is this
indicates PLL unlock.
The TS-140 does not have the PLL circuitry for
this to ever work for you and it is missing the Final
unit for it to transmit on this freq. The unit does
have some of the same control circuitry as the TS-680
which does work on 6 meters.

mark,

i dont have the answer to your question. know what you
mean about 'they get way to[o] much' for the cables...

kenwood makes a nice DC pwr cable w/ the 'T'. comes on
a correctly fused also. is it me or does ICOM put the fuses
on the wrong end of the mobile rig cable supplied w/ ic-208
and ic-2710?

consider also your time is worth something. i modified two of the
icom cables and just purchased the third that i described above.

good question though, mark.

1547. Help With Damage Assessment Please?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-17 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <01be5ac6$0ea56f60$058592d0@Bit-Net.bit-net.com>
Source record: 116428
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Two boxes arrived USPS yesterday, many items were damaged.

I need to provide USPS with value and cost-to-repair or replace. Can anyone help, please?

The Kenwood TS-530SP suffered the bending of three knobs (Load, Plate, Drive) with damage to one knob (the transparent plastic piece behind the Plate knob) and some shaft binding but all seems to be working OK electrically. There was some additional cosmetic damage to the edges of the bezel and to the chassis but the face wasn't scratched.

Questions:

1. Is the bezel available for this?
2. Should I be worried that the bending of the controls may be more serious than it appears externally?

The front of the stem of the Shure 444D mike was badly scratched and scuffed its full length. The base suffered minor scratches and the head only
a couple of tiny nicks. It looks looks awful but works fine!

The Heath HD-1422 Antenna Noise Bridge suffered a serious dent and many scratches to the top of the case (seems OK at first glance otherwise).

The Autek Research WM-1 Computing Meter was badly crushed on the face with all three front switches broken and the meter casings destroyed. (Unsure if the meter movements survived but doubt this is worth repairing.)

The Yaesu FRG-9600 Receiver suffered some minor scratches and some nicks to the edges of the front bezel. The bezel should probably be replaced
to maintain value.

The Unadilla 40m antenna suffered irrepairable damage to one of the trap/coils.

I spoke with the Postmaster here and she said that I need to make a list of the damage and get an estimate of the cost to repair or replace

I sure would appreciate informed feedback!

Thanks! & 73,
~~~

1549. HAL P-38 tuning indicator

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-17 00:00:00 UTC
From: Rick Mintz <Rmintz@Frontiernet.net>
Message-ID: <7aep89$1454$2@node17.cwnet.frontiernet.net>
Source record: 116472

Hi gang,

Has a nice chat with the HAL folks at the Miami Hamfest (really computer show, as it turns out), and....

I am considering the purchase of a HAL P-38 RTTY board. There seems to be a gap in my knowledge though.

How do you tune this beast? I'm used to the LED's on the PK-232. I'm not using RITTY or anything else, software wise besides WF1B. HAL makes a tuning indication (RTTY-1 is the product), but $90 for an LED indicator seems a bit steep.

So what are the other options?

(Also, if you have experience with a P-38, I'd appreciate a quick comment as to it's efficiency over other TNC's like the PK-232 and the KAM. Basically looking to be sure the investment is worthwhile.)

Please email reply direct (and also to the group if you want.)

Thanks.....

I have a COMPLETE SET of QST magazines from 1980 through 1994
(15 years, 180 issues!) that I need to sell. I'd love to
keep them but just don't have the room. They are in very
good condition. This is a fantastic resource for anyone who
is seriously interested in Amateur Radio.

I am now taking bids on them. I will only sell as a complete
set, buyer picks up (NJ) or pays shipping. I'm thinking that
the minimum bid should be about $180 (ie, $1.00 per issue).

Please respond if your interested.

Thanks.

I couldn't really hazard a guess, unless the people selling have
decided to upgrade their rig with something better. I am happy with my
570D. If I could afford the price difference between the 570 I have and
something in the Kenwood 870 or Icom 756 I would think about selling it,
but since that isn't on the horizon now, I will keep it.

The HAPPY99.EXE is going around. Generally, users don't know they're sending it. It's a worm, which if you run it will attach to your system files and cause you to resend it (unknowingly) as attachments to email and newsgroups.

Latest versions of Norton AntiVirus, McAfee, etc., can find and remove it.

If you receive the file, don't run it!

Does anyone know a good cheap source for these components? I am interested in the K and X band.

Also if anyone knows a good source for electronic components in general? I know who the regulars are but I was hoping to save some money.

A website would be the best but a name would be just fine. Also please respond to email or email + newsgroup so that I don't miss your reply. You must remove NOSPAM from my email address.

Thanks Greg

>VERY stupid. CT
>

IT depends how do you understand word frequency !!! Those Icom rigs, like mine 751A, show carrier frequency. When you change mode, yes carriage freq which can be seen in the readout, changes. But passband (where your transmissions frequency components are) does not move.

So I could say that in radios where frequency readout does not "change" (for example whe moving from LSB to USB) the passband moves.

VERY stupid... ;-)

Ok, ok, both are ok. Different ways to build a radio. But let's be carefull when saying that "frequency moves".

From: hodgesmn@email.uc.edu
Message-ID: <7af9ba$6gm$1@news.ececs.uc.edu>
Source record: 116493

I have the following two pieces of equipment for sale.

1) Yaesu FT-530 HT dualbander which includes:

- 1, 7.2V 800ma 2W Ni-Cd pack (pack used about 7 times)
- 2, 12V 1300ma 5W Ni-Mh packs (each pack used no more than 3 times)
- Trickle charger

The radio is in excellent-new condition. Make offer.

2) Kenwood TMV-7A Mobile dualbander.

This radio has never been used. It is still in the box with the plastic covering on the LCD display. I bought it at Dayton last year with the intention of replacing the ICOM 2350H in my car but decided to keep the ICOM. I have another TMV-7A as my base. Make offer.

If interested or if you have questions, reply to the above address. Thanks.

Mike

Hey Mike, Cat 5 is perfect, but rather than use cable that you have to crimp connectors to, use one of those ready-made cables with the connectors molded on the ends. Then you get one of the female-female adaptors ($2.50) and you're ready to go in no time. I got a 6' black cable ($7; other sizes and colors available), ran it under the carpet in my car, and plugged in. One thing to remember: either the cable or the adaptor has to "reverse" the wiring so it lines up properly. 73 Gerry KB0VOF

Hello...
I am buying a couple of 12volt 1200MAH batteries for my
Yaesu FT-530 handheld.Aftermarket..
When I bought my radio I got a battery charger #NC-18B which
will charge at 14.5volt 50MA... I know that this charger is good
for the 12v 600ma batteries that I first had but is it still good for
the newer stronger batteries??????
is the charging time just doubled..???
The charge time for this charger is 15hours for the 12v 600ma..

these batteries are now only available through Yaesu for twice the money
as the newer batteries.....
Please advise..
thanks in advance.
Bob

Anybody have any idea on were to find or have the p/n for the power plugs found on most mobile rigs these days? I'm talking the connector that looks like a 'T'. Both my Kenwood TM-V7A and Yeasu FT-8100 have the same connector. I also know that the Icom 2000H had this connector (used to one one before the above two radios were purchased).

I would rather not buy one from either of the above companies since they get way to much money for them.

Tnx Mark

I've been very happy with http://www.shfmicro.com. Very responsive and knowledgeable "tech support" from Alan! They don't take credit cards or phone orders, though -- you have to order via email or fax, and pay via snail mail or COD.

>
> Also if anyone knows a good source for electronic components in general? I
> know who the regulars are but I was hoping to save some money.

http://www.newark.com has almost everything, but they can be somewhat expensive. Their printed catalog is the size of a major metropolitan telephone book, so the higher prices are somewhat justified IMHO.

http://www.digikey.com has less stuff, but it tends to be cheaper than Newark.

http://www.mouser.com and http://www.circuitspecialists.com can also be good places to look.

Brian

FT101EE was my first rig. It is reliable, fairly easy to use and you learn a lot from it. It takes a little time to learn to tune it, but once you get the procedure down it is very simple. I have since traded up after using it for about 4 years, the only mistake I made was selling it to trade up, should have kept it for a second radio.

1600. Spill, Shock & RF Protected Laptops?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-17 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <01be5a12$4300f540$c18492d0@Bit-Net.bit-net.com>
Source record: 116540

After watching a recent news digest program about the use of
focused radar pulses as anti-personnel and anti-hardware weapons
it occured to me that there are many potential less-intentional
sources of interference to communications and computing.

Panasonic is marketing a magnesium alloy case laptop as spill
and shock resistant:

http://www.panasonic.com/computer/notebook/product.htm

I am wondering if this or other brand laptops might provide reasonable
defense against strong magnetic and/or RF forces?

I am in the market for a Pentium II laptop and reliability in the field
under a variety of weather and RF conditions is an issue

Thanks! & 73, DavidC K1YP

1601. Icom 2710 Lost Mods

Does anyone sell any good quality modern all band HF transceiver kits that you can build yourself? Something that would computer interface and include a spectrum scope through the computer would be really nice.

And that's just my opinion, I could be wrong. :)

Need power cord for a Tempo One HF rig. Misplace mine.

1611. Re: SX-28 & SX-28A--what's the difference?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-17 00:00:00 UTC
From: n3xbu@aol.com
Message-ID: <19990217010032.29666.00002827@ng108.aol.com>
Source record: 116551

The SX-28A is a later version that came out in 1944. It was advertised as a "postwar model" incorporating many design changes suggested during its "combat use" during the war years. The 28 came out in '41. The 28A has modular sections for easier servicing. The transformer is potted. The 28 sold for $159.50, the 28A for $223.00 The 28A uses a 6BA7 in the first RF and in the noise amp instead of 6SK7's. They advertised the PM-23 as an accompanying speaker for the 28A instead of the R-8 or R-12. My SX-28A is marked as such on the front. Many are not. Yours COULD be a 28A...look and see if it has 6BA7 markings on the chassis, for the aforementioned functions and an easily removable clip-on cover over the ganged tuning capacitors. If it does it's an SX-28A, if not it is an SX-28. In practice, the changes don't mean much except for servicing and "perceived" rarity. Neither are rare. Both are highly regarded, collectible and usable boatanchors with excellent audio.

Source record: 116552

Watch out for the battery for the memory. It's very tricky to replace and lots of people just send them back to Icom$$$. I liked my 751A, it sounds the best (better than my 1000D) for listening to shortwave with its 8KHZ filter. It is a great radio. Never owned the kenmore 850.

> in the software.

We agree -- that's what works for the EPH 5102's. But this beast has
DES. When I do the programming plug and key sequence to enter the
keyboard programming mode, it says:
--- 1D

I assume that it wants me to enter a DES key to use. I don't want to
use DES. In fact, I'd like to disable it. My software is EPHEDIT
v1.1 copyright 1990 and doesn't have any DES options.

If anyone knows any way around this, I'd like to hear of it. I mean,
field programming from the keyboard can come in handy occasionally!

I may have to try my hand with the factory techs. They're usually
helpful, but I didn't want to bother them if this was an easy question
to answer.

Thanks!

Mike

I think the main reason behind the SX-28A was to incorporate Hallicrafters' new RF coil design. Have two SX-28 receivers, one is really a SX-28A having the postwar mods noted by Brian.

1622. SAFT SPS200 Stand by power supply help needed

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-17 00:00:00 UTC
From: nworbekim@my-dejanews.com
Message-ID: <7aeccpqra1@nnrp1.dejanews.com>
Source record: 116562

Hi, my ups inverter has failed. The charger works, at least the batteries show fully charged, but when the power is removed, it only shows a few mv's on the plug outlets.

I have looked thru the web for info, but can't find anything. Anyone have a schematic for the inverter board?

thanks!
de KM4IY in southern KY

"KD5GEH" <kd5geh@koogles.net> writes:
>Are both bands 2 meters?

The FT-51 is a 2 m/70 cm (440 MHz) dual band. True dual receive,
so you can do full-duplex conversations and crossband repeat.

It will also receive VHF on the UHF "side" or UHF on the VHF "side",
so you can listen to two VHF or two UHF frequencies. But some step
sizes aren't available and receiver performance is somewhat less when
listening to the "wrong" band for that side of the radio.

It also has CTCSS encode/decode, "spectrum analyzer" display,
alphanumeric memories, alphanumeric messages sent from one FT-51 to
another, and just about any other bell and whistle that you can
think of.

>very frustrating experience....It's UPS for me....

I had a frustrating experience wth priority mail. Out of 4 packages sent
recently, two made it on time, one after 9 days and one never. I was told
by the postal employees that priority mail is now serviced by a
third-party.

Vinny,

You need a template from a radio in the same serial number series
ie xN or xM etc. with the same hardware mods. I have templates from
both M and N series radios but both have the hardware mods. I'll
send you a template if your hardware fits the profile.

1627. FORSALE - Great starter station, only $350!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-17 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <7ael62$p4n@nntpb.cb.lucent.com>
Source record: 116567
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S that I would like to sell.
In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.
I'm also including an MFJ 941-c antenna tuner and a
Kenwood noise cancelling hand mic, so this is a complete
station expect for the antenna (longwire or dipole would work
fine) and a key. $350 for the whole setup. The rig ALSO
has the optional Kenwood 500hz CW filter in it.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

1630. Kenwood station for sale (TS-940S, SM-220, IF-232C, MC-50, PC-1, SP-940)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-17 00:00:00 UTC
From: kr4wmNO@SPAMbigfoot.com
Message-ID: <MPG.1134aa15d8b69bf59896ae@news.infoave.net>
Source record: 116570

BEFORE YOU READ THIS AD: You must be aware that to REPLY to it, you MUST REMOVE the characters NO before the @ and SPAM after the @!!! Failure to do this will result in your mail being "bounced".

I have for sale a complete Kenwood station, minus the tuner and amp. The set consists of:

Kenwood TS-940S with autotuner, computer interface chip installed, CW filters, voice announcement of frequency/mode. Does LSB/USB/AM/FM/FSK. (includes factory service manual and all updates)

Kenwood SM-220 'scope

Kenwood PC-1 Phone patch

IF-232C computer control interface

Kenwood HamWindows software

MC-50 microphone

SP-940 external speaker

The rig is in flawless condition, provided I don't scratch it when I remove it from the rack it sits in. Same with the speaker. The SM-220 scope was bought used, but was owned by a smoker, otherwise it's in good condition, with a few minor scratches. PC-1 phone patch has never been connected by me, and has glue from tape on the top. The patch cosmetically matches the rig, but was bought used separately. The IF-232C is as-new. I bought it recently from Burghardt, and I suppose it's still under warranty. Prices is $1650.

Will not not part it out. Price does NOT include shipping or packaging. If shipped, packaging will be done by mailboxes & Etc. at your cost. This is too nice a rig for me to throw it in a box with a few peanut shells and have you suffer the consequences. I am willing to cart it from Mailboxes & Etc. to the local UPS depot which could save you as much as $50 on the shipping, depending on how many boxes it takes. Obviously because of size and weight, would prefer local pickup, or will deliver out to 100 miles. The original rig box comes

with it, but don't expect much, squirrels got into my storage shed and ravaged all my cardboard boxes. Will be going to Asheville, NC via Spartanburg, SC in mid-March to pick up a new rig if this helps (can drop it off to you then if you're along the route).

E-mail to kr4wmNO@SPAMbigfoot.com

Reason for selling- located a different piece of equipment that I want. I change rigs on a regular basis just for the hell of it! The only rig I'll never part with is my Ten Tec Corsair II. If you've never owned one, you'll never know why!

DON'T FORGET TO REMOVE NO and SPAM from the reply!!!

73 all, -Web in Myrtle Beach, SC

1631. UPDATE re. Damage Assessment & Parts Sources

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-18 00:00:00 UTC
From: DavidC <davidc@bit-net.com>

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Several folks have asked me to update the list re.
this situation, here is what I learned about Kenwood
parts for the TS-530SP.

I discovered that:
http://www.pacparts.com/

has TS-530SP parts:

KENWOOD MODEL NO. TS530SP
AMATEUR RADIO TRANSCEIVER BASE UNIT
MANUFACTURE 1985
Description Part # FRONT PANEL A20-2499-03 $85.94
MICRO-FICHE N/A
OWNERS MANUAL B50-4075-00 $7.00
SERVICE MANUAL B51-0935-10 $12.60
TOP COVER A01-0778-11 $47.65

I also found:
yaesuparts@worldnet.att.net
Parts Department (Manuals, Parts 8 am - 4 pm PST):
(562) 404-2700
(562) 404-4828 FAX

So far they have failed to reply to my E-mail inquiry about
parts for the YAESU MODEL NO. FRG-9600

Thanks to all who E-mailed suggestions, will advise further
as to how the USPS responds.

The reason you don't seem to have a problem is that no one, virus hackers,
or even decent application developers bothers to write code for you OS.

For sale or trade Yaesu FT-727r dual band ht with brand new 12v 1100ma battery and W&W Associates master charger.

Radio is in fine working order with the exeption of the vox button is missing and the rubber grips on the volume and sql controls or gone. I have the original owners manual but no box.

Would like to trade for a 220mhz radio also in good condidtion and working order.

Or would like $200 for the radio or b/o.

Thanks N2HYO - Mike

1641. Kantronics KAM+

I bought a Kantronics KAM+ about 4 months ago to play with the
digital modes, and discovered that I am not all that keen on RTTY, PACTOR
or packet. Therefore, the KAM+ is up on the block for sale, to finance
other hobby expenditures.
It has the 7.1 firmware installed and is in excellent condition.
The 12vdc adapter is included, along with a HF cable that will work with
Kenwood 8 pin microphone plugs. All original packing and documentation
is included, along with some notes that are not part of the original.
The asking price is $200, or a reasonable offer. I am located in
the Dallas, TX area.

Hello Kansas City Tracker Users.

I'm collect the names of all the available programs that being written, or suppot the kansas city tracker.

All these information wil be placed in a Database and wil be available to all of you.

On my homepage http://www.ping.be/~p4u11324/ you wil find a list of all available software.
If you know a program that not being in the list, PLEASE fill in the Question form:

If you click here, you go wright to the question form
http://www.ping.be/~p4u11324/KCT_Ques.html

Thanks to all of you !

Are you asking somewhat to participate in committing a crime just so you could have your own private copy of pirated software? The Big M has been suing people all over for doing just what you are asking. Let us know what knuckle dragger responds and implicates himself.

Wake up and stay legal!

1651. FS: Kenwood 4-trace oscilloscope

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-18 00:00:00 UTC
From: yulius@shay.ecn.purdue.edu
Message-ID: <7ai769$9fl$1@mozo.cc.purdue.edu>
Source record: 116391

Hello,

I have a Kenwood CS-6040 oscilloscope forsale. Here is the specifications:

150 MHz
100 programmable steps
NTSC & PAL TV-line counter
4-channel, 10-trace
High-intensity CRT (20 kV)
Logic control
A/B trigger mode
Time difference between channels is 0.5 ns or less
Dynamic range of 8 div
Automatic trigger
TV sync
CH-1 output
Single sweep
Holdoff
Cursors: delta T, delta V
Screen readouts

Pictures of the oscilloscope:

http://expert.cc.purdue.edu/~yulius/kenwood.html

I think this is the top of line Kenwood 150Mhz oscilloscope. The oscilloscope
is in excellent working condition. I am asking for $550.00 + UPS Shipping.

If you are interested, please send an email to: yulius@ecn.purdue.edu

Best regards,

Aristo

This is a GE Ericsson labled, MAXON MFG radio. Specs at link below. 16 channel, bandsplit 450-470MHz, CTCSS... With mic, no
mounting hdwr. Unit powers up fine and displays '4000' (model #) I had to search to find this on FCC database. I have no
dummy load to test, but all seems fine..

http://www.maxonusa.com/specsht2.htm#4150spec

Make offer, will consider trades...

A bitmap file is a graphical file (LIKE A PICTURE or A DRAWING) however, a graphical file needs a program to view the graphic. Corel, Photomorph and even Internet Explorer can open a Bitmap image file. The virus uses certain setup files within the Bitmap viewing program to open it. It is this process that embeds the virus in the registry of the host computer. The rest is literally history.....Like I said, it is very, very nasty. Especially if one doesn't back up files on a zip drive or jazz drive often.

I'm trying to help with a Kenwood 2m mobile (sorry I don't know the model number) that has problems with the display. It goes blank after the radio has been running a while.

About last November there was a discussion about a similar problem arising from a bad contact in the circuit board foil (?)

I can't find the discussion on Deja News, so I was hoping someone would be kind enough to post or repost some help.

Thanks.

Hello, everyone, I have a mint shape HW101 (from Heathkit) to give to a new home. The unit doesn't have a vfo, but everything else in installed. The unit was put together by Heathkit many years ago, used for about 100 hours, then the vfo was removed(I was helping a friend out with his unit and gave him mine).

The chassis is mint, contains all tubes, parts, etc...anyone like to have this piece of history? Well, you pay shipping and the rest is yours...

Thanks Everyone,

Lee

Russ, the solder held fine - it was the steel washers that wouldn't stick.
The part that I filed was the thin rosin coating afterwards.

Brian

The IC-281H is a 2M mobile with 440 receive. It is also the worst
clunker I have ever owned. I bought one new several years ago and I
didn't keep it very long. It is more prone to intermod than any other
2M rig I have owned and has very tinny receive audio and an overly hot
front end. It might be okay if you live in a rural area and have a
high frequency hearing loss but otherwise, I would avoid it like the
plague.

Here's how to deal with it if you don't have an anti-virus program (and why DON'T you?!!!). I got the info from another person:

This virus attacks the Wsock dll file only. That is the file that runs you E-Mail and internet. My got to the point where it would not connect to the internet

So if you are infected. You must follow these instructions!

1 Get the latest updates from Norton anti virus.

2 Run your virus scan (The infected file along with the virus should appear.)

3 Put these files in quarantine

4 Copy a new Wsock file from a friends computer.

5 Delete the infected files

6 Download the new Wsock file

This will free you from that dreaded Happy 99 virus.

That not a very popular band? I've come accross very few radios capable of 'supporting' it while websearching (the nearest radio store's quite aways from here, so I'm trying to educate myself before the trip)... I was really wanting a 2m/222/442 mobile radio (my local club has repeaters on those 3 bands), and.... Nada...

Anyway.. I'm not putting 2-3 more radios in my car, no matter how useful they may be.. :)

Did your "friend" also acquire MARS and/or CAP licenses/permits for such activity?

Inquiring mind, you know. I find it fascinating that so many "new" Amateur radio operators feel a "need" to transmit out of band...

1690. Re: Hamfest NIMH Batteries (soldering to cells)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-18 00:00:00 UTC
From: gsm@nardis.bfr.co.il
Message-ID: <slrn7cnu09.jme.gsm@nardis.bfr.co.il>
Source record: 116446

Sorry, I did not get into this thread at the start.

I have soldered to lots of batteries. here in Israel, batteries are very expensive, about $1.50 each for AA alkalines and getting anything with tabs is almost impossible. I do the following (YMMV).

I use a temperature controlled iron at about 375 C and (here's the trick) SILVER SOLDER. I use a roll of "silver bearing solder" I bought at radio shack when I lived in the US.

The silver sticks to the battery case and the lead/tin mixture sticks to the silver.

Work quickly, wear eye protection and let the battery cool between connections.

Wet the battery with silver solder and let the rest of it build up in a drop on top of the silver. Let it cool. Melt the top of the drop with the tip of the iron and stick a tinned wire in it.

Works every time for me. Doing it with regular solder resulted in a lot of wasted lithium button cells.

Geoff.

The deadliest virus Ive seen lately is called DOOMSDAY 9. Someone will send you a Bitmap file via email and when you open it the virus is put into RAM. Its held there until the next startup (just like SAVE SETTINGS ON EXIT), and then wraps itself around the registry upon reboot. The virus itself is triggered when a SCREEN SAVER program kicks in. The creators of the virus knew if you screen saver engages, you most likely wont be in front of your computer.

The 1st thing it starts to gobble up (once the screen saver engages) is *.INI files. Once done it looks for *.DLL files and then finally *.EXE's. By the time you realize (when you return to your system) happened, its usually too late. This one is nasty!

A friend of mine sent a zipped up file of this virus to use on obnoxious jerks however, even they are too good for this bad-boy.

I keep seeing posts in here about soldering to batteries and I have to add my $.02 worth. At my last employer we had a very skilled tech that was soldering a D cell alkaline battery and the battery literally exploded like a firecracker. The tech lost his eyebrows and got a 2nd degree alkaline burn to his face and was out of work for a month. OSHA got involved and determined that an insulator in the battery could not take the heat of soldering and shorted causing the battery to react and explode. I never even guessed at the explosive potential of a battery before this incident. I know this will not dissuade anyone from soldering a battery but be aware that batteries can react violently and for no apparent reason so perhaps some precautions are in order.

Denis

Source record: 116455

I have the following heathkit stuff for sale.
All units include documentation (either copies or originals).
Will make deals if you want multiple pieces.

SB-104A (original 104 with the 'A' retro kit installed).
Has nice narrow CW filter and NB. With matching SB-604
speaker/power supply. Unit works and is very clean.
$450.00 shipped (it weighs a ton)

SB-104A (a real one). With matching SB-604 speaker/
power supply. Unit works and is very clean.
$400.00 shipped (it weighs a ton too)

SB-644 external VFO for the 104. Works, clean, with cables.
$100.00 shipped (it's light)

SB-634 station console. This is the unit with a phone patch,
clock, ID timer, watt/swr meter. The unit is clean and works
but the ID timer LED's have deteriorated badly - they work
correctly but are almost impossible to read.
$100.00 shipped

>when saying that "frequency moves".

Icom has done this both ways. Some older Icoms moved the passband with
a mode change, newer ones leave the passband alone and move the carrier
insertion point. I like the older method better.

>Rick N6CY

IF DSP is preferred. This allows demodulation to be done in DSP, and that's generally better than with a traditional demod. It also can allow the narrow filtering of the DSP to be inside the AGC loop (but not all radios with IF DSP actually do that). Having the narrow filter in the AGC loop means that out of passband signals won't pump receiver gain. This is a serious problem with rigs having only AF DSP. (The delay through the DSP can still screw up AGC timing, however.)

The 222 MHz band isn't available in Japan or Europe. So there is much
less demand for such a rig. The manufacturers have offered a few USA
only radios with it, but the sales volume is generally too low to make it
profitable. This lack of equipment has in turn tended to reduce activity
on the band. Too bad, it is a good band.

No no no. Older leave the passband alone and move the carrier insertion point (display jumps, like in 751A). Newer move passband and carrier insertion point will not move (and display shows same freq. for usb and lsb - like 765). Display shows always carrier insertion point in Icom rigs.

I like both :)

Does not!
Like I said, not a problem *or* a concern here.
Because I have a modicum of intelligence, I run OS/2 _and_ I use a
shell account at my ISP. Fully 70% of the palaver in these ng's is
pure horse hockie -- so reading ng's via tin goes soooo much faster,
and I don't suffer the download time, nor the consumption of dasd.
Nearly 50% of the stuff that comes over the transom into my mail
folders is either deleted outright by my unix mail filter or is
deleted by me in pine without being read. Again, I don't suffer
the download time, nor the consumption of dasd.

As for viruses, I've yet to see one that has infected an OS/2
system. Probably the same can be said for Linux.
It's just that MicroSloth systems are soooooo easy (,and, probably
fun) to break and injure.

And, anyone who would run an 'un-invited' .exe on their machine
probably deserves whatever befalls them. Why don't you invite
the next low-life walking by on the street into your house while
you go off to work? Makes about the same sort of sense.

So, every time one of these threads about viruses, worms,
and (mostly) hoaxes show up in some ng, with the un-informed and
ill-informed anguishing about the perceived threat(s), us folks
running OS/2 (and Linux) get a chuckle -and- I'm not wasting
any time downloading the $%#@%$#! thread.

Jonesy

>is the charging time just doubled..???
>The charge time for this charger is 15hours for the 12v 600ma..

The MAH batteries will charge fine with the "wall wart" (slow) charger, at
an increased charging time.

The MAH batteries will NOT work with the Yaesu Quick Charger.

I've been playing with the 24 GHz units from http://www.shfmicro.com for
awhile now; they're pretty nice 5mW units that include varactors for
modulation, which the subway units probably wouldn't. They sell them
for $58 each, which didn't strike me as unreasonably expensive.

I will probably end up not needing the two that I have, as a matter of
fact, because I am likely to need another 10 dB or so worth of ERP in
the project I'm working on. If you're just looking for a couple of
units to play with, I could probably be persuaded to sell 'em cheap.

Ten-Tec receivers (XCVRS) are designed to be as free as possible of internally generated noise. Such noise, which for various reasons, degrades a receiver's ultimate performance.

No experience with the Kachina - but plenty with Ten-Tec products. Perhaps I am one sided with this, but: Common sense and years of experience with computers in the shack make me wonder just how quiet a receiver operating through a computer will be.

No recommendation - just my view.

I've seen such software ftp'able on several radio-store websites for the
radios they sell.. I just assumed that the manufacturers gave away the
progs for their radios (or included it with 'em).

ICOM IC-271H 2meter all mode transceiver.
The IC-271H operates FM, SSB and CW with 100 watts output and is considered as the standard of comparison in all mode VHF transceivers, and is the OSCAR enthusiasts dream rig. It includes 32 frequency/mode/offset/tone memories, built-in subaudible tones, scanning, adjustable tunning speeds, RIT, all-mode squelch and tone control. Output power is adjustable from 10 to 100 watts output. 12 vdc operation. Frequency coverage is 143.8-148.2 Mhz. Hand mike, power cord and manual are included. Mint condition physically and operational.
$750

This is interesting. I have often wondered what train of thought leads
one to conclude that software piracy is justified. Someone had to put a
lot of time and energy into programming, so why should their efforts be
considered public property? This is kind of like building a house by
hand and then having someone come along and claim that that you should
give it to them for free. Granted, it's easier to copy software than to
copy houses, but the principle is the same. Perhaps a better example
would be that of a detailed architectural design.

[deletions]

Do you mean 6BA*6*s? The 6BA7 is a pentagrid converter and would have
made a poor RF amplifier (noise-wise) than the 6SK7.

You need glasses! There are a set of figures on the site and a 100 watt
PA is due later this year. The radio is designed as a basic unit and
then modules can be added so that you only buy what you need.

> as the newer batteries.....

I've found the yeasu batteries are twice as good as most of the aftermarket brands. Or at least here they have been. Usually , you will charge at 10% of the current capability of the battery for 15 hours.. Say a 1200, should be charged at 120 ma for 15 hours for full charge. So I'd think with a 60 ma charger on a 1200 battery, you will need to charge for 30 hours at that rate. It'll work, I charge 1000's and 1400's with a 60 ma charger. What I do to tell when charged is to put a voltmeter on the battery and when you peak voltage with little change after an hour, you are fully charged. Will vary, but on say a 12 volt car battery, it will usually be fully charged at 14.4 volts. When you unhook the charger it will drop back to 13.8 or so. It's bad for a battery to stay at full charge voltage for extended periods of time. You should always unhook when fully charged or else the battery gets hot. Another kinda unprecise way to tell if charged is just to pick up the charging battery in the hand at room temp. If it feels cold or even room temp, it still needs more charging. When you pick it up and it feels very slightly warm to the touch, you are pretty much charged up. A voltmeter is the best way to tell though. It will never lie, once you know what your full charge float voltage is. I use 7.2 volt cells. If I remember right they are full at about 8.4 v MK

> I purchase about 4 batteries a year for my Handheld.. "Smitty" N5WPV

I guess they are ok, but the last supposably "super heavy duty" battery I got from Mr. Nicad sure didn't last too long. It was a 1400 and it's already deader than a doornail. Funny part is, I have an original yeasu 1000 battery that is still going strong and it's much older than the Mr.nicad. Heck, it was old when I bought the mr.nicad 1400. I'd ask about the specific brand of the internal cells and go with the highest quality you can find. Might cost more, but it'll be worth it in the long run. I find the original yeasu batteries are the best. Don't know what brand cells they use, but they make most others look like junk over the long haul. I imagine mr.nicad can get the high quality cells as well as the other companies. BTW, my radio is a 470. Different case than the 530 I think. Mine uses the fnb series batteries. You can also buy just the inserts too. But taking the cases apart is not for the faint of heart. I use a hot hairdryer first and then a sharp razor blade to cut the glue seal. I still tend to mangle em a little before it's over with. The dead 1400 case , I converted to a regular battery case. MK

One of the rarest Swan rigs, the SS-200, Swan's first venture into all solidstate design, was sold only for a couple of years in the mid-1970's. This one, from my long-time personal collection, is an 8.5 cosmetically (very clean, front panel and knobs bright and shiny, no dents or dings) and 9+ electronically (hot receiver, adjustable 1 to 100 watts out, smooth VFO action). Has built in VOX, calib., and provision for external VFO; all controls on front panel, and includes a (very rare) copy of the complete manual. This is a piece of American ham history and a delight to use QRO or QRP.. $295 + shipping.
Tks! Jan N0JR

Ralph,

Great radio! I can't tell from the stats what frequency it's on since I don't have the book in front of me but I do have schematics and tune up information. I assume it's a Canadian version since your from Canada? This is a plus! I've made repeaters, link radios and remote bases from these radios. Goto: http://www.geocities.com/CapeCanaveral/9896 to see an example. Let me know what you need (short of a copy of the whole manual because it is very large and doesn't copy well) and I'll try to help you out.

Swap meets. Look for the ex-intruder alarm units. I've bought loose
Gunn diodes from Birkett in England. Mainline carry them too.

You might have a look in the Yellow Pages and see who sells/services
radar intruder alarms and automatic door openers in your area.

With that said, I'm still trying to find where the TTC get the
24 GHz Gunn units for the doors at Toronto subway stations... :-(

1753. 2 VX-5R Questions

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-19 00:00:00 UTC
From: Larry Benko <benko@aztek-eng.com>
Message-ID: <36CD7E47.5D2C5C61@aztek-eng.com>
Source record: 116338

I recently purchased a Yaesu VX-5R HT and am really impressed with it. I inadvertently programmed two memory locations with the same frequency. I can overwrite either one with a new frequency but can I just erase one (or reorganize the order) without software. My Icom W32A allows this type of operation fairly easily. Can a priority memory be returned to non-priority? If I can't do the erase without software, is it possible to do with software?

Also this is my first HT with a SMA connector. BNC connectors have always been very reliable. I do some foxhunts where I connect antennas, attenuators, etc. on and off the HT fairly often. Do the SMA connectors hold up as well as BNC connectors do provided that I am careful? Any experience would be appreciated. I could remove the ducky once and add a small flexible SMA to BNC cable and the do all the connections at the BNC if SMA reliability is an issue.

Thanks for any advice,
Larry BEnko, AC0B

>
> <<< Dan >>>

No, developers don't write for that os. Especially not IBM, Lotus, Logicware, StarDivision, Sundial, Oracle, Global Village, Hilgraeve, Petree, Stardock, Maxis (through DUX Software), Computer Associates, Hummingbird, Microware, Mission Critical Software, PC_Systemer Norge ALS, Peachtree Software, Spitfire Software, CADWARE s.r.l., JMI, Software Artistry, Network Controls International, Arkansas Systems INC., Debold, CIM Vision International, Applied Signal Technology, Celestech, Indec Systems, POS-TECH Inc., Attachmate Corporation, Gilmore Systems, Quercus Systems, MicroEdge INC., Prominare INC., Tailgent INC., Watcom, Artisoft, Creative Assistance Software, Novell, Arcadia Technologies, Carry Associates, Clear & Simple Inc., Colorado Memory Systems, Orange Hill Software, PCX, Pinnacle Technology Inc., WarpSpeed Computers, Symantec Corp....

Lord knows that there are only a couple of utilities for OS/2 stored at hobbes.nmsu.edu, and that XFree86 won't run on it.

Can't tell you how many developers aren't doing anything for OS/2, especially all the ones listed on: http://www.tstonramp.com/~freiheit/os2apps.shtml.

No developers? No apps? BULL!

> Because I leave in The Netherlands and don't have a credit-card
> PSE help me !!!!

Who said a "credit card" was mandatory? Author contact info in in the
"readme.txt" file on your system for APRS:

The Shareware fee for WinAPRS is $60.00 US. You can register by sending a
check or money order to:

Mark Sproul
698 Magnolia Rd
No Brunswick, NJ 08902
USA

Please make checks payable to Mark Sproul

Phone (732) 821-4828 Please do not call after 11:00 PM Eastern Time

e-mail: sproul@ap.org
ksproul@rci.rutgers.edu

WinAPRS is written to the Win32 API, this means that it works under
WindowsNT and Windows95. To run under Windows 3.1, you will need the
Win32S library (DLL). It has been tested (not extensively) under Win3.1
with Win32S. If you do not have Win32S installed, WinAPRS will NOT run.

Hello to the group,
I have a like new (3 mos old) 8 port 100 base-T hub. It is 19" rack mountable. These type of hubs are rare and very sought after. This guy is in mint shape!

I also have a 48 port patchbay for use on an Ethernet network. 19" rack mountable great shape! I place the value for the Hub at $175.00 and the patchbay at $100.00. If this sounds like something you might be interested in send me your trade offer (Ham Gear, 2, 6, & 10 meter gear, amps, meters, antennas etc. WHATEVER!) and I will get right back with you. I'm really looking for a 3 to 5 element 6 meter beam or some long pieces of low loss RG-8 coax or a 6 meter all-mode amp. You pay your shipping and I pay mine. (FedEx)

Hi gang,

I am construction a homebrew version of the Cushcraft A3WS
12/17 meter, 3
element beam. I downloaded the .PDF files from the Cushcraft
site to see the
spacing dimensions. The scans that they have do not have the
resolution for
me to read what the values are!

Anyone with an A3WS manual that can tell me the
measurements?

The specs I need are.......

on BOOM:

Reflector to Driven spacing
Driven to Director spacing

on ELEMENTS:

Reflector: center to trap, trap to end
Driven: center to trap, trap to end
Director: center to trap, trap to end

Many thanks.......

1775. ft50 mod?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-19 00:00:00 UTC
From: Mercs01 <mercs01@hotmail.com>
Message-ID: <36CDCF3B.6E@hotmail.com>
Source record: 116360

To anyone knowledgeable of the freeband mod.

I did the mod and the power up sequence is not working.
but when I power up the radio using (hold lamp,ptt,knob)
I get these options:

Band A3--
uHSSO
uTHSO
uTISO 70
uSILV 135
uS9LV 218
uHIPO 100
uL3PO 71
uL2PO 39
uL1PO 14

The mod says that when "Band A1" is shown to push the knob for 1/2
second and change it to freeband. But I can't adjust it.
My s/n starts with 8C_ _ _ _ _ _ If that is any help.

Thanks in advance

1776. FORSALE - MINT Kenwood TS-520S w/CW filter, mic, MFJ tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-19 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <7akj6t$mde@nntpb.cb.lucent.com>
Source record: 116361
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S that I would like to sell.
In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option). Also included
is the Kenwood hand mic and (if you need it) an
MFJ 941C antenna tuner.

The price is $350 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

Good day to you ..I have picked up an old Heath SB401. No manuals with it. Anybody out there want to part with a copy of the tune-up manual or send me a scan of the schematic?
Any assistance with this piece of ham history is appreciated...
73 de John VE3UJK....anderson@csolve.net

I have a COMPLETE SET of QST magazines from 1980 through 1994
(15 years, 180 issues!) that I need to sell. I'd love to
keep them but just don't have the room. They are in very
good condition. This is a fantastic resource for anyone who
is seriously interested in Amateur Radio.

I am now taking bids on them. I will only sell as a complete
set, buyer picks up (NJ) or pays shipping. I'm thinking that
the minimum bid should be about $180 (ie, $1.00 per issue).

Please respond if your interested.

Thanks.

From: "The SwanMan, Jan Robbins N0JR" <swanman@cfu.net>
Message-ID: <36CDE6F5.22A7716A@cfu.net>
Source record: 116368
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.boatanchors

The 400 was Swan's first (1964) full-coverage (80-10) transceiver. Few remain, and most that do are in terrible shape. Almost none can be found with all the accessories, which are themselves very rare. This 400 is an 8.5 or better on anybody's scale, however: complete, bright, shiny, and fully operational. What's more, it comes with ALL the original accessories: 117XB power supply/speaker, 420 full coverage VFO, 406 SSB/mobile VFO, 22 VFO Adapter, and VX-1 VOX unit. Own a beautiful piece of ham history. $395 + shipping.

1784. FS: Mint 235XLT Trunk Tracker with WS1000 antenna.

Message-ID: <36CDF0AB.953E88F4@ibm.net>
Source record: 116369

Uniden Bearcat 235XLT Trunk Tracker mint condition:

Used less than 10 hours. Original box, manuals,
two battery packs, charger, charger module, earphone
and a WS1000 antenna instead of the stock Uniden.

In Rich Wells hand held antenna review, he rates the WS1000 antenna
the best for 800MHz reception. If you are interested in hand held
800 MHz trunking, this will be your optimum match.

$150 plus $5 Shipping and insurance. Postal money orders only.

Please email me if interested. birck@ibm.net

Wouldn't it be awesome if you could build a HF xcvr kit with 100 Watts PEP
and the works like that?

From looking at their web page though, it looks like the thing is just barely
coming onto the market.

Didn't see any sensitivity or selectivity figures either.

And that's just my opinion, I could be wrong. :)

Down East Microwave, Ten-Tec, and Rick Campbell KK7B all offer 222mhz kits. I suggest building and setting up a 222 station and activating the band in your area. There are a handful of exisitng operators just dying for some contacts.. Antennas are small and propagation is enhanced by tropospheric conditions. Try something new and learn from it.

Since you won't go into all the details, Mike, let me guess: your
friend believes that he can receive permission from the licensed user
of that out of band channelto use non-type approved equipment there.

Well, if that's the case then he's dead wrong.

If he's doing MARS or CAP work, he can use an amateur radio on those
frequencies. But for anything else, the *radio* needs to be approved
for use on the frequency, as well as the *operator* - and the FT-50
is not approved.

1808. FS: Boonton 4200 Digital Microwave Power Meter

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-20 00:00:00 UTC
From: yulius@shay.ecn.purdue.edu
Message-ID: <7anc1oblr1@mozo.cc.purdue.edu>
Source record: 116186

Hello,

I have a Boonton 4200-S/21 Power Meter forsale. It is in excellent working condition. The specifications are -70 to +30 dBm, 100KHz - 110GHz(sensors dependent). The unit can also be upgraded to 2 channel sensors and IEEE-488. This unit has digital display and rear panel recorder output connector. Included with this unit, a power sensor 4200-6E(100KHz-18GHz, -40 to +30 dBm), power cord, and complete manual. I am asking for $550(shipped).

Picture of the power meter(from tucker.com):

http://expert.cc.purdue.edu/~yulius/boonton.html

If you are interested, please send an email to: yulius@ecn.purdue.edu

Best regards,

Aristo

For Sale:

I have a RCA solid state 100 watt repeator on six meters operating. Has it's own controller/Ider, power supply, etc. Also extra Pa/tx and rx strips. (4)Duplexers are DB products. No antenna. $500.00 you arrange pickup.

Motorola 220 mhz repeater, conversion vhf mobile mounted in 19"rack, with power supply, S-Com 5K controller, 6 cavity duplexers. NO antenna. $500.00 your arrange pickup.

Both machines can be shipped, but would be expensive from 37615.
Open for offers to take both at a discount.

Sam

1816. FS at Cincinnati Hamfest

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-20 00:00:00 UTC
From: W4UDX <crslex@iglou.com>
Message-ID: <36CF2CB7.1AC203E8@iglou.com>
Source record: 116194

For Sale at Cincinnati Hamfest next weekend:
Drake TR-3 HF transceiver, AC-3 power supply, and MS-3 speaker.
Transceiver has good finals. Has some receive and transmit on 80 through
20 meters, but is dead on 15 and 10. Front panels are in super shape,
but cabinets need repainted (no dents).
AC-3 works well. MS-3 has a NEW 5x7 full range speaker in it. Includes
original owners manual. $135 for all or trade for a Drake MN-4 tuner.
Also a Tokyo Hy-Power HC-150 antenna tuner with built-in SWR/Watt
meter.

See Mark W4UDX at Cincinnati hamfest. Thanks

1818. Re: KNWD TS-870S VOX Operation

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-20 00:00:00 UTC
From: moses_elmshorn@t-online.de
Message-ID: <7anflb$4nr$1@news00.btx.dtag.de>
Source record: 116196

George,

you are quite right, VOX does not work when AF input
is supplied to the ACC plug on rear of TS-870. I've
made the same experience. VOX only operates by feeding
the AF into the MIC plug on the front panel. My
suggestion is: use SEND-Button manually or use
PTT-Output provided via RS-232 of your computer.
Therefore see PSK31-helpfiles for the finer details.

From: Gary <catlink@erols.com>
Message-ID: <7anrjc$2b8$1@winter.news.rcn.net>
Source record: 116207

Kenwood TR-751A 2m all mode W/TTMic (no tone board), $400.

Yaesu FT-757GX HF all mode W/FP-757GX power supply, $550.

President HR2600 (HR2510 CPU installed with Mod) 10m all mode W/Mic/mobile bracket/original CPU, $200.

Alinco DR-119 W/TTMic and Cell freq Mod (very cute little mobile) $150.

All radios have never been mobile, owned by a non-smoker, and are in the best condition you could find anywhere. However the Alinco has developed a little squiggley line in the far right part of the LCD display. Its been that way for months so hopefully shouldn't change much and does not interfere with the LCD display. I have pictures of the equipment if needed.

Thanks.
Gary

You had your noise blanker set too high. Back it off and the (intermod?)
noise goes away. Actually I found this quirk to be handy. When the band is
dead, I leave the blanker on full and do something else. When a CW signal
shows up anywhere on the band, I hear it. Then I simply tune to it, and make
my call. It's an undocumented band scanner...

Am I mistaken, or isn't it still illegal to modify a Ham rig to transmit outside the amateur bands. Such as 11 meters for example. The amateur rule book must be kinda like the Bible. Interpret the thing to suit your own requirements. CB'ers Bootleggers and Pirates are the ones who seem to have the most trouble abiding by the rules. Good luck in the contest Good Buddy!

Michael H. Ward wrote:
>
> In response to all who said something to the effect of "why? he isn't

1853. Re: Info - TS870

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-20 00:00:00 UTC
From: Steve Ellington N4LQ <N4LQ@igLou.com>
Message-ID: <36cecb51.0@news.iglou.com>
Source record: 116235

I just got rid of mine. I'm a cw operator and over a period of 30 days with my 870, I grew to dislike it. I didn't dislike it for it's features however. Who could ask for more? I disliked it because of it's performance. The radio is quadruple conversion thus it has 4 mixers and I.F. stages. All of this works together to produce tremendous noise! Running this racket through a narrow dsp filter results in noise that has the pitch of the desired cw signal. After a few minutes of listening, my brain was in a cramp. The dsp filter in the cw position, the dsp filter opens to a maximum of only 1khz. This is far sharper than I normally use with my other rigs.

Also, the radio had the strange ability to recieve signals that weren't really there. Known as intermod, it's a miserable situation to tune across 40m and hear cw from somewhere coming through on all frequencies and sounding like blowing air! This on a $2200 radio?

On SSB, the radio noise changes to a dull roar which is more bearable. Filtering is ok and you have the ability to open up the dsp to 6khz and enjoy hi-fi ssb. Tx audio is excellent too. This thing would make a great swl receiver or a good radio for the appliance type ssb operator who likes a lot of loud audio and would never consider taking the covers off the rig.

I've sworn off those multi multi conversion rigs and am now sticking with older model TenTec gear for cw. They have virtually no internal noise and listening to cw is like fine music! For you who have never experienced this, I
invite you to try an old Omni A or D, Delta II, Triton etc and hear what I mean.
For you who own 870's, you have a fine appliance that will last a long time and
lots of menu items to play with. Have fun.

73 Steve N4LQ

PS: I also had an FT-1000MP. It was just as bad.

From: Joel Dorfan <bdorfan@FRED.icon.co.za>
Message-ID: <7amja5bfd1@hermes.is.co.za>
Source record: 116237

Either my radio is doing something strange or I am doing something stupid.

In SSB mode if I plug in a morse key then the internal tone generator which usually only operates when the key is pressed sounds continually. If you switch to CW mode then the tone disappears unless the key is pressed. There is no short in the key cable.

Also and probably related, even with the key disconnected, if the radio is in CW mode and the send/rec button is pushed the radio goes into transmit mode but when the button is released it will not go out of transmit mode unless the radio is toggled off and on or one of the mode buttons are pushed.

In CW mode the automatic ATU does do the correct thing if AT TUNE is pushed, ie. transmit, match and then revert back to receive.

Everything is fine in SSB mode.

Anyone have any ideas?

Thanks

While cleaning out the shop, I found a box of Moto OEM STX batteries.
Although they have been in storage for awhile, they look pretty good.

I tested all and tossed the junk. The remainder of the batteries were
conditioned on my Alexander Optimizer.

Batteries are $20 each, 2 for $30 or 3 for $40. I have about 15 left.

MOST are at least 1400-1500+ mh strong. All are guaranteed to have at least
1000 mh of power.

Try WorldRadio magazine or QST to start. If there were a good list posted on the web I would like to see too. BTW, there are couple of good ones coming up here in the Midwest soon. There is one March 5, 6, & 7th at the ARRL Nebraska State convention in Norfolk, Nebraska at Northeast Community College. For more info try http://members.aol.com/davidn0xbn/evarc.html

I have for trade a Yaesu FT-50RH with the DVR Keypad option installed and
the following items:

FNB-41 9.6v 600ma battery
FNB-49 6v 600ma battery
sma-to-bnc adapter
speaker mike
leather sheeth cover
The Poutch for the FT-50
antenna
wall wart for charging the batteries
box and manual

I would like to trade this for a Yaesu FT-51R with some accessories. If
interested, please email me at kd6clo@geocities.com

1871. KNWD TS-870S VOX Operation

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-20 00:00:00 UTC
From: George Liepins <ke4hw@*izdzessmani.*sprintmail.com>
Message-ID: <7amr53$l21$1@ash.prod.itd.earthlink.net>
Source record: 116253

I've been trying to get the TS-870 to xmit in SSB using PSK31 digital mode. The computer audio card is connected to the xcvr Acc 2 connector via a 13 contact DIN plug. I can receive well, but when I try to xmit, the VOX refuses to activate, no matter what I do. It appears as if the Acc2 audio input connection can not activate the VOX. If I use manual xmit, still there is no output.

If I connect earphones to the sound card audio output and activate the test signal, I get 1000 hz audio in the earphones. I can't duplicate the same at the connecting cable DIN plug end (xcvr end), 'cause the contacts are so small, I can't get get them hooked up to the earphone contacts. I'm using about 6 feet of computer 8 lead cable, where the individual wires are about #20 or #22. Since it works in receive, I think the wire is OK. I checked continuity on the 4 leads that I use, and all test OK. I'm stumped.

Any suggestions?

Pls erase the *....* stuff in my address for direct reply.

I made a mistake in my last post for this equipment. It is a G-77 xmtr.
Gonset G-66B receiver, G-77 transmitter, with matching power supplies for
12 VDC and 115VAC. Manuals included. Cosmetically excellent, S meter
on receiver sticks. You will need to make up the interconnect cables.
$249 for all plus shipping. OBO
regards,
Chuck...K1KW

i have a problem with my Icon-751. when you go to am. you have to press
the second button from the bottom abouve the notch button. wonder why that
is? you have to push it in for am. to sound right, and for side band, you
have to press it again? i guess the filters aren't installed right. any
comments on this?

For someone who just happens to know how to program, maybe....
Or someone who has any interest in such...
If you'll look around, you'll notice that 'hackers' (the old definition..)
are in the minority with computer users nowdays.
I wrote a morse-code prog about 20yrs ago (I'm just now getting around to
actually learning it, btw), when there were none.. Nowdays, you don't need
to do that. Numorse, etc. etc. progs already exist.

HMMMmm - seems to me there is a switch on the back, or something similar, for switching between a straight key/bub, and one of those paddle jobs that keys differently - maybe the switch is in the wrong position, and it's function is interacting? I'll have to check my TS-570, it's probably the same way...

1887. RX-320 Free Software

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-20 00:00:00 UTC
From: mktg@ix.netcom.com
Message-ID: <36d00dc7.14377905@nntp.ix.netcom.com>
Source record: 116269

February 20, 1999

Dear RX-320 User,

Beta Version 1.0B is now available for the software I
wrote to operate the Ten-Tec RX-320 receiver.

Changes from Version 1.0A:
- Program displays a list of scan files for you
to make a selection. It is no longer necessary
to type the name of a scan file
- AGC setting now works correctly.
- The setting of the Offset is saved between
sessions.
- The program code has been fine tuned to increase
efficiency and speed.

Features of Version 1.0B:

- Squelch (adjustable)
- Scanning of lists (files) with adjustable delay
- Tuning in a variety of steps from 1 Hz to 1 Mhz
- 34 selectivity settings
- Runs under DOS or Windows - even works on a 80386
computer using DOS

I would be happy to supply free of charge this Beta version
to anyone interested who has an RX-320. The software will not
function without an RX-320.

The program is supplied along with several other files in
a single zip file. Installation and removal are simple, as
the program does not affect any system settings either in
DOS or windows.

The program is easy to use - just press various keys to engage
the different functions.

Istallation, removal, and operating instructions are included.

If there is enough interest, the Beta version may advance into
a final version.

Send your request to my e-mail at mktg@ix.netcom.com and I will
send you the zip file by return e-mail.

Regards,

David

Source record: 116293

I have not used the WinRadio, however, I do have the Icom R-7000. It is suitable, as you have probably read, but, all these radios need a good input filter and low noise preamp to receice the hydrogen emission @ 1420 MHz, or any other frequency, for that matter. I made a set of helical filters for the R-7000 out of #4 AWG soled wire and 3" diameter copper drain pipe. They work well with typpically <0.3 dB loss. I follow these with a low noise MIMC. The setup works well and you don't dedicate the low noise part of the setup to one frequency.

why do you want to deal with Gunn elements ? have you ever considered
building a DRO utilizing HEMT,S ? its cheaper and much more reliable, i build
24GHZ DRO utilizing 1 hemt with 13dBm output power at 5V Supply and the costs
including PCB are running around 20$.

Japan has no 222 MHZ amat. band (it belongs to the police). The US market is a small sideline compared to the Japanese market, so there is not enough money in selling 222 MHZ radios. There is only 1 triband radio with 222, the Kenwood TM 741 (or is it '742?) with added UT 220 module. The whole deal will run about $1000.00

1898. FS - Yaesu FT-101EE Complete Base Station

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-20 00:00:00 UTC
From: icstars@nmia.com
Message-ID: <36d42d21.27286186@news.nmia.com>
Source record: 116301

I have an absolutely mint, complete Yaesu HF rig.

I. HF-101EE Transceiver
Still has the plastic on front.
2. YC-601B Digital Display
3. FV- 101 External VFO
4. Phone Patch - Landliner\Speaker
5. 1 set of extras finals

This rig has been in storage and has seen little use. The 101 is still
in the original box with original packing.

The transceiver was bought from Webster Radio in Fresno, Calif.
I have the owners manuals and the service manual for the 101in mint
condition.

I would like to see it put to use by a new ham or someone who knows
and respects the 101 line.

KB5XE

Will NOT separate. price: $575.00 OBO plus Shipping

From: VE2CJW <ve2cjw@hotmail.com>
Message-ID: <9tqz2.99$Zp3.5834@carnaval.risq.qc.ca>
Source record: 116302

Excellent condition MFJ-422C keyer for sale. It is a black Bencher with a code practice oscillator and keyer circuit mounted over it. Never used for transmitting, only for code practice because we have to take a transmit test in Canada. Reason for sale is that I have no interest in cw. Asking price is $70. U.S. and that includes shipping and insurance to your QTH. Inquire by email if interested.

1901. Which Rig....Update

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-20 00:00:00 UTC
From: ny4t@home.com
Message-ID: <36ce32b6.4768807@news.nash1.tn.home.com>
Source record: 116304

Thanks for all the good responses on which rig to buy for contesting in the $900 range. I also posted the query to the Tennessee Contest Group e-mail reflector and questioned local hams who have owned the various rigs on my list. A couple of you have asked me to post what I have learned so here goes. These are the choices in order. I will have to save up a little longer for my first choice rig but hope it will be worth it.

1. Icom IC-765 - Gets rave reviews from contesters. Able to handle very crowded band conditions with ease. Lots of bells and whistles but relatively easy to operate. Good service record. Downside: price over $1200 used.

2. Kenwood TS850SAT - Also gets rave reviews from contesters with 2 reservations. Stay away from the early run and get the decked out version with all the filters. Unfortunately, those who have the 850's with the filters don't seem to be selling them and if they do, they like them an awful lot. Can pick up a stock 850 for around $900 but the ones with the filters, what few I've seen, are in the $1100-1200 range.

3. Kenwood TS570D or D(G) - Most folks believe the upgrade on this one isn't worth the money or the trouble. It would be tempting to buy a completely new rig for about the same price as the used ones above. This rig, however isn't highly regarded by those whose primary interest is contesting although it is well liked by other hams. The huge number of these on the used market despite their relative newness makes me highly suspicious of this rig as well.

4. Yaesu FT990 - Supposedly a good rig when it is working properly. Bad service record reported from several sources steers me away from this one entirely.

5. Kenwood TS940 - Several folks have reported a bad service record with this rig and since it is 2 generations back, it could be hard to get proper parts and service.

6. Yaesu FT900CAT - Not really interested in a small rig but this one is supposed to be a dandy. Will let it do it's own selling job as I am borrowing one of these for the ARRL DX SSB. I played around with one during the NAQP but not during crowded band conditions, i.e. , it was the 2nd rig in a Multi/2 operation. If it performs, though, I may give it a look since the used prices are quite reasonable. I really want a big honker of a rig, though.

7. TS450SAT - Fully Loaded - My current rig is a TS450SAT with no extras. If I found a 450 with all the filters and the DSP unit at a good price I would consider it. The 450 I have is a great rig but to me it is kind of boring to own 2 of the same rigs. It would be a major plus for ease of operation though.

8. Ten-Tec Omni V - A quality rig but the price of this one plus the external auto-tuner puts it out of my range. I hate the looks of these locally built contraptions as well despite their reputation for good service and quality.

So, there you have it. I hope I haven't stepped on anyones toes if they are very attached to one of the rigs I have gotten bad reviews on. If so, just remember, it is whether you are happy with your rig that matters and though some rigs may have a poor overall service record, you may have lucked up and gotten one of the good ones.

They could be referring to shareware or freeware software. I have lots of
that type of software that can do a varity of different things. None that
can do what is mentioned here, but the point is that shareware could be
in mind here.

Sri abt SEND-button, it does not work at all.
The TS-870 accepts AF-inputs at the rear panel ACC
ONLY by keying the PTT line on the same ACC. It's
pin 9 ! You can still use your RS-232 for keying
PTT:

Here's an extract of file psk31sbw.hlp:

To change from receive to transmit [...] use the RTS or DTR
pin on a spare COM port to do operate the PTT line. Connect
pin 7 or pin 4 of the DB9 (pin 4 or 20 of a DB25) either to
the base of a transistor or the gate of a small FET, and
connect the collector/drain to the PTT line of your transceiver,
with the emitter/source going to ground. Use the SETUP menu
to select the COM port in the program.

>I am talking about cycle life. Sure, NiMH cells provide a lot more energy in
>the same size case...but unless they are treated properly, they only last 1/3
>to 1/2 the total discharge/charge cycles as to modern NiCds.

To be fair, life also depends on how often you cycle the pack. If you only
turn on your radio once a month, neither NiCd nor NiMH packs are likely
to get anywhere near their rated number of cycles before dying of old
age or other maladies.

For such a user, the longer cycle life of NiCds may not matter at all,
and the extra capacity of NiMH may be well worth the extra cost.
In addition, the lower weight is worth something in a handheld radio.

1947. Icom IC-T2H DC input jack?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-21 00:00:00 UTC
From: knewcomb@i-plus.net
Message-ID: <16Kz2.196$mc.607@monger.newsread.com>
Source record: 116123

Hello, all! just got the icom t2h HT, and the manual doen't say explicitly
that the dc jack can be used to power the unit. It is supposed to be used for
charging the batteries, and it says the power should be turned off while
charging. i went ahead and tried running it plugged in, and it seemed to work
fine. does anyone know if it's ok to run the radio with it plugged in, or am
i voiding my warranty :(by doing so??
the only problem that i can think of is that the provided wall-wart charger is
rated at 200mA, but full power transmit sucks about 500mA. if it's safe to
run the unit through the jack without batteries, i know i would have to use a
slightly heftier power supply.
Any help is appreciated. thanks in advance!

73's,
Kevin

Hmmm...interesting question.

Should any manufacturer ship a radio with a battery that only has an expected battery life of about 1/3 the life of NiCads?

Because properly-treated NiMH packs only last about 1/3 to 1/2 the discharge/charge cycles as to properly maintained NiCds....

The NiMH packs that I have had experience with in other applications lasted considerably longer than Nicads. Plus they have no memory problem. NiMH are far better than nicads.

Actually, the '50 gets CMT images 90.2 Mhz above the real freq.
The RX quality of the images is nearly as good as the results acheived
with a mod'ed unit.
BTW, as the 440 ham band covers 420-450, and a stock '50 only covers part
of that range, there is a perfectly legitimate reason to OOB TX the unit.
Also, the BAND-FREE mod allows RX on 2 TV channels that it will not
otherwise operate on, which can be useful,
and of course totally LEGAL.
So the poster who ASSUMED illegal intent to mods should not make
assumptions regarding the above.

Hi,
I have two Collins S-line styled BUD INDUSTRIES boxes.
These are empty, and in new condition.

One is the same size as the 32S / 75S cabinet, including a white trim ring and
a flip top lid. Ready for your home brew antenna tuner, amp,
or ???. With white feet. Color scheme is dark grey front panel,
light grey box. Matches my S-line colors nearly perfectly.

The other is very small -- like the size of a DL-1 dummy
load, etc. Same color scheme. Would be ideal to mount your speech
processor, cw keyer, clock, or ??? to match your prized S-line.

Price is $150 for the pair, plus exact shipping (these are light).

thanks,
Joe K7JOE

Hi,
I have a Swan 100MX solid state HF rig for sale. This is a very compact HF rig, all solid state (no tubes)
Looks similar to the Atlas 210X/215X rigs -- about the same size. Full 100+ watts out on all bands, and works USB/LSB/CW. Includes 20 amp matching 13.8V power supply that matches the small rig in size and appearance. This would make a nice setup for the travel trailer / 5th wheel, since it is small and can be used AC (with matching speaker/supply) or DC from your battery. Very effective noise blanker too (unlike the "new" compact HF rigs)...

Covers 80/40/20/15/10 meters
Includes original boxes and manuals/paperwork
Includes microphone
Includes power supply and radio

Email if interested

That's all very ineteresting, but Mike specifically asked about
getting access to out-of-band transmit and he never mentioned either
in-band use out of the range of the set or out-of-band receive.

> So the poster who ASSUMED illegal intent to mods should not make
> assumptions regarding the above.

No assumption was needed to understand that out-of-band transmit was
the subject of the request. Mike claims that his friend is licensed
to do this, but as he declined to go into details the unlikely truth
of that claim was not demonstrated.

Source record: 116148
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I have for trade a HEathkit HW-7 with matching power supply. THis radio has the following mods.

1. Audio CW filter
2. Accu-Keyer with speed control and jack for paddles.
3. New receiver front end.
4. RF gain control

This radio appears to work, seems to receive on three bands, RF output accoding to meter. I have no docs on the mods. Power supply puts hum into receiver (typical for HW7?)

I want to swap this radio for Heath SB accessories, need SB630 station console and SB620 analyzer, will also consider swapping to SB102/HP23.

Since I don't have the docs this radio is sold as is, guaranteed not to be DOA.

I was considering purchasing a used UHF VISAR for GMRS use. I noticed quite a few for sale. Someone advised me that this may be because the VISAR radio has poor battery life. Mot.com does give a (low) 5 hour life on the std. battery. Anyone have any experience with a Visar radio?

I have a Bendix-King portable and it can go two days......

Greg

According to experts (three gentlemen who have collectively spent decades working on batteries - and wrote the book, "Batteries in a Portable World"), properly treated NiCds will last much longer than properly treated NiMH cells.

I am talking about cycle life. Sure, NiMH cells provide a lot more energy in the same size case...but unless they are treated properly, they only last 1/3 to 1/2 the total discharge/charge cycles as to modern NiCds.

You didn't go old enough. Look at the IC211. When you change modes,
the carrier frequency stays the same, only the bandpass changes. With
the newer IC251, the carrier jumps around, and the bandpass stays the
same. Aggravating as hell when you want to shift back and forth between
CW and SSB on satellites. You have to retune to find yourself again.

Hey OM's

I've started a new ATV - Project. Therefor I'm still looking for a LCD Video Panel (color 5"-6") with PAL or RGB input.
I've found some webpages but they want more then 500$. It is too much for a hobby - project.

Do you know some other sources for this kind of LCD Panel. For example a reseller for used equipment or surplus discount ???

thank you

Hi,
I have had problems with my ADI AT-600..
The FIRST one I had, had various annoyances
(i.e.: lamp getting dimmer on certain freqs.,
certain pl tones not decoded correctly,
certain pl tones not encoded correctly.)
I sent it back and instead of checking it,
and repairing it, they just sent me a new one...
I thought 'oh great, a NEW radio'
Only that the 'NEW' radio has at least one of
the same problems as the old one (pl encode)
(Specifically the 179.9 pl to access my local
repeater)
PS: I know TWO other people with AT-600's and
theirs WORK on that repeater.
So my question is "what to do?"
I don't want to send this one back to ADI
as well only to wait ANOTHER 6 weeks for the
turn-around. I also don't think I should have
to pay someone to check it out and maybe fix it.
Could I have it fixed and send the bill to ADI?
Would they pay it??
Or should I just send it back demanding a refund for
all the stress, and maybe look at a new HT?
(PS: I can't send it back to the people I bought
it from, it's too late for that)

Any comments would be greatly appreciated,
please reply direct as I do not frequent these newsgroups..

Thanks and 73!
N2OX

Source record: 115935

I have a Yaesu FT-920 for sale. It is in mint condition, and is owned by a non-smoker. It is less than 2 years old. It has the AM and FM options installed, and comes in the original box with the manual and hand mike. The FT-920 has 100 watts out on all bands 160m to 6m, the recevier tunes 100KHz to 30MHz, and also covers 49MHz to 54MHz. Power required is 13.8 volts at 20 amps, features are a built in keyer, full break in CW, digital voice recorder, and great DSP... $1100, and I'll pay the shipping in the continental US...

2015. Re: 2 VX-5R Questions

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-22 00:00:00 UTC
From: "Dean, Greg" <N9NWO@GTE.net>
Message-ID: <7at56kshn1@news-2.news.gte.net>
Source record: 115938

How do you like the radio? And what is with the adjustable
antenna that they are advertising? How does it work on 6M?

And what opinions does it have?

:I recently purchased a Yaesu VX-5R HT and am really impressed
:with it. I inadvertently programmed two memory locations with
:the same frequency. I can overwrite either one with a new
:frequency but can I just erase one (or reorganize the order)
:without software. My Icom W32A allows this type of
:operation fairly easily. Can a priority memory be returned
:to non-priority? If I can't do the erase without software,
:is it possible to do with software?
:
:Also this is my first HT with a SMA connector. BNC connectors
:have always been very reliable. I do some foxhunts where I
:connect antennas, attenuators, etc. on and off the HT fairly
:often. Do the SMA connectors hold up as well as BNC connectors
:do provided that I am careful? Any experience would be
:appreciated. I could remove the ducky once and add a small
:flexible SMA to BNC cable and the do all the connections at
:the BNC if SMA reliability is an issue.
:
:Thanks for any advice,
:Larry BEnko, AC0B

Jose R. Camara <camara@quantacorp.com> ...
:I have one ft-50 and one vx-5r. In my opinion, neither is an obvious
:winner, and the next year's VX-7 will still not be the end of the
:update/upgrade game.

I thought that the VX-5R was just now being released. I haven't
heard about the VX-7. How did you find out about that one?

What is ICOM doing to complete?

:
:FT-50 Pluses:
:
: 1. DTMF decoder
: 2. Audio record/playback (nice way to report back how someone sounds,
:good for short memos)
: 3. Working CTSS. Not only the scan (which now seems to work in the
:vx-5r) but regular CTSS usage, the VX-5R has an intermitent bug that
:makes it take as much as 3 seconds to open, making CTSS unusable.
: 4. Defense - hold by the antenna, swing at attacker's face (specially
:with the BIG battery). Ha. Try that with the VX-5R! :-)
:
:
:VX-5R Advantages:
:
: 1. Size. A great compromise for people wanting a LARGE speaker, HUGE
:display, COMFORTABLE keyboard and TINY radio. Display larger and
:better than ft-50, keyboard still OK for small fingers, only speaker
:is worse than ft-50, distorts at much lower volume than ft-50.
:
: 2. Battery. Li-ion (7.2V 1100mA) has longer life at 1/3 of the size
:of the original BIG FNB-41 for the ft-50 (rated 9.6V 600mA). FT-50 has
:more options, including MAHA NIMH but still half the capacity.
:
: 3. 220+ memories
:
:VX-7R killer features:
:
: 1. Full PC inteface (reads display, accepts commands, included tnc,
:runs scripts). I loved the feature in the PC software that
:continuously scans the band for activity, generating reports for most
:active frequencies (per time of day), etc. It was neat that YAESU this
:time decided to publish all the protocol. It was neat to finally see
:an IrDA interface. Bye, bye cables...

:
: 2. Real audio spectrum analyzer, you can even see the CTSS tones,
:tell deviation, tune to the very center, etc. It is also neat to see
:CTSS frequencies in a fraction of a second, not the old scan,
:try-one-at-a-time method.
:
: 3. 30 minutes of audio recording is now a real plus!
:
: 4. The lock code really discourages theft, at least to informed
:thieves. Without entering the code, only a trip back to the factory
:with return to the registered owner will make it work again. Virtually
:unbreakable, thanks to serialized CPUS and encrypted coding in the
:EEPROM. How come they didn't think of this before?
:
: 5. Finally an AC adapter with enough output to transmit. Thanks to
:the switched 15V/2A brick.
:
: 6. The new telescopic antenna makes the radio even more portable, and
:the graduated last section assures lowest swr for all 7 bands!
:
: 7. Price. WoW! How can they be making any money selling these for so
:little? No wonder they are out of stock. I am thinking of cancelling
:my order to wait for the wristwatch version. Does anyone know if it
:will also have the optional GPS module?
:
:
:Regards,
:Jose
:
:I only mentioned main, useful features for the ft-50 and vx-5r that I
:thought could make a difference for people trying to decide on either
:one. The VX-7R must be in a real serious backorder situation, as
:another search to Altavista brought no links. Maybe the FCC objected
:the built-in digital cellular descrambler jumpers...
:

I'm not sure what the MFJ copy says, but a TNC is basically a modem --
but to a radio vs. a phone line.

If just for VHF and 1200 baud, I've found the Kantronics KPC-3 to be a
good unit: Very small and portable, and you can install an internal 9
volt battery for portable ops.

For HF digital I'd recommend the KAM+ (or whatever the current unit is),
also Kantronics. It will support HF digital (pactor, RTTY, etc.) and
VHF packet (1200 baud) simultaneously, making it a good total solution.

I switched to Kantronics after using an AEA PK-232 MBX for a number of
years.

2025. Re: Icom 746 & 1.9 khz filter ???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-22 00:00:00 UTC
From: Chris Musselman <junkmailbox@pacbell.net>
Message-ID: <36D25574.AF65FD25@pacbell.net>
Source record: 115948

I bought and installed the 1.9 kHz fillter in my IC706MKII, and I'm very happy with its filtering and audio performance, with one catch: When using it on upper sideband signals, I have to turn the RIT to the right about a mark and a half on the dial to get a good audio response, otherwise it is very tinny. LSB works well with RIT in the center position. I sent the radio to Icom, they kept it for 3 weeks, and then said it was 'normal'. I'd also like to hear from other users about this...

Sorry if I wasn't more clear: OF COURSE a higher-amperage batter has more amperage.

I am talking about the LIFE OF THE BATTERY - the number of times we can expect it to be discharged and properly charged. THAT'S where modern NiCds have an edge over any other portable battery source for our needs.

Message-ID: <36D14954.AA72C1AD@picknowl.com.au>
Source record: 116068

G'day

I have two Philips PRP 1650 trunking handheld units that are only a few years old. The corporate trunking bases are now switched off. The units have 27C512 size PROMs on board in sockets. I am after the binary file for a non trunking version IF IT EXISTS. I want to convert them to use the UHF amateur band. The units are on W4 UHF band now. I have access to a programmer.

Failing this, I will sell them (cheap, In Australia that is).
Thanks and can someone tell me if there is a better place to post this.....
email replies would be great.

Looking for manual for Galaxy V Mark II transceiver and p/s.
Photocopy is fine. Will pay *reasonable* copying/postage.

Yes, I'm aware of the many vendors who sell manuals, but I'm
hoping to find a fellow amateur who has the manual and would
be willing to help me out (like I do for my fellow amateurs
when I have a manual they need, since I NEVER charge for my
copies OR for the postage!).

73,
Dean / K5DH

2052. FORSALE - MINT Kenwood TS-520S w/CW filter, mic, MFJ tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-22 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <7arqsa$2fe@nntpa.cb.lucent.com>
Source record: 116076
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S that I would like to sell.
In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option). Also included
is the Kenwood hand mic and (if you need it) an
MFJ antenna tuner (I forgot model no - older unit
but works fine).

The price is $350 + shipping. You might find one for a few $ less,
but NOT is this great condition.

>> To be fair, life also depends on how often you cycle the pack.

I carefully worded my post (that time...<grin>) to include "treated properly."
Properly treated NiCd packs will last a lot longer than properly treated NiMH
packs - when we talk about the life of the pack.

I am a big fan of NiMH packs, too - I use them daily. I also use Maha's MH
C-777a universal conditioner/charger with its heat sensing and correct
"treatment" of both NiCD and NiMH packs.

Radio Amateur Callbook products for sale:

Radio Amateur's DX Guide - 14th edition - 1981 $ 5

Callbooks:

1988 North American $ 10

1991 North American $ 10

1994 North American $ 10

The above are "like new," They have been opened up, but that is
about it.

1987 International $ 5

1990 North American $ 5

1990 International $ 5

1990 Supplement (includes both US and DX) $ 2

1992 North American $ 5

1992 International $ 5

These have been used. They show their use, but are not "beat up" or
damaged.

Some of these have been listed before, but I have reduced the prices.
I have also found more in some of the corners!

Prices do not include shipping from Florida.

E-mail to W8EK@usa.net

Thanks.

Source record: 116099

Hello, I am working on a VHF portable radio (ICOM 02AT) and I need to replace an IC on the tone board. This IC is described as "S-7116A TONE GENERATOR C-MOS LSI". It is a 14 pin DIP, Maximum supply voltage is 12v DC.

I have tried to cross-reference this part with my usual sources: ECG/NTE, Digi-Key and Mouser and have come up blank. I have not been able to get through to ICOM on the phone (busy signal, or eternal hold pattern) so I am throwing up this request to see if someone else can find a replacement. If you need further information about the IC (pinouts & functions) you may email me direct.

Thanks in advance for any help you can provide.

Want to trade for MINT HF transceiver, TS140S, 440s or ??? Must be mint!
What do you have?

Have to trade MINT Drake SW2 receiver with remote and tilt stand, and MINT Icom 2100H. I'm original owner of these radios and purchased all new this year.

Bill K9KZ

2078. FS: Kenwood

Source record: 116102
Body handling: Binary attachment payload not displayed: MOS_INC.vcf

Kenwood- all items are in new condition in original boxes with all
manuals, etc.

TS-690S -HF+6meters, tone board, MARS
mods.....$950
DSP--100 -matching external digital processing
unit.....$200
SP-23 -matching extenal
speaker.....$75
PS-53 -matching heavy duty power
supply.....$235

I would like to sell this as a complete set and will discount it to sell
it all together--I will take $1,100 for and u ship.

Kenwood PS-33- matching power supply, as new in box.....$175
also have:
MFJ-989C- deluxe 3KW roller inductor tuner with SWR/Power meters
in as new condition in original box with
manual.....$250

Thanks for reading my ad. Please respond to MHOFFMAN@olywa.net or call
me at home after 6pm pacific time at
360-491-7216.

2081. Yaesu FT-50 x VX-5R x VX-7R

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-22 00:00:00 UTC
From: "Jose R. Camara" <camara@quantacorp.com>
Message-ID: <36D1BAD7.C877C2C@quantacorp.com>
Source record: 116105
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I have one ft-50 and one vx-5r. In my opinion, neither is an obvious winner, and the next year's VX-7 will still not be the end of the update/upgrade game.

FT-50 Pluses:

1. DTMF decoder
2. Audio record/playback (nice way to report back how someone sounds, good for short memos)
3. Working CTSS. Not only the scan (which now seems to work in the vx-5r) but regular CTSS usage, the VX-5R has an intermitent bug that makes it take as much as 3 seconds to open, making CTSS unusable.
4. Defense - hold by the antenna, swing at attacker's face (specially with the BIG battery). Ha. Try that with the VX-5R! :-)

VX-5R Advantages:

1. Size. A great compromise for people wanting a LARGE speaker, HUGE display, COMFORTABLE keyboard and TINY radio. Display larger and better than ft-50, keyboard still OK for small fingers, only speaker is worse than ft-50, distorts at much lower volume than ft-50.

2. Battery. Li-ion (7.2V 1100mA) has longer life at 1/3 of the size of the original BIG FNB-41 for the ft-50 (rated 9.6V 600mA). FT-50 has more options, including MAHA NIMH but still half the capacity.

3. 220+ memories

VX-7R killer features:

1. Full PC inteface (reads display, accepts commands, included tnc, runs scripts). I loved the feature in the PC software that continuously scans the band for activity, generating reports for most active frequencies (per time of day), etc. It was neat that YAESU this time decided to publish all the protocol. It was neat to finally see an IrDA interface. Bye, bye cables...

2. Real audio spectrum analyzer, you can even see the CTSS tones, tell deviation, tune to the very center, etc. It is also neat to see CTSS frequencies in a fraction of a second, not the old scan, try-one-at-a-time method.

3. 30 minutes of audio recording is now a real plus!

4. The lock code really discourages theft, at least to informed thieves. Without entering the code, only a trip back to the factory with return to the registered owner will make it work again. Virtually

unbreakable, thanks to serialized CPUS and encrypted coding in the
EEPROM. How come they didn't think of this before?

5. Finally an AC adapter with enough output to transmit. Thanks to
the switched 15V/2A brick.

6. The new telescopic antenna makes the radio even more portable, and
the graduated last section assures lowest swr for all 7 bands!

7. Price. WoW! How can they be making any money selling these for so
little? No wonder they are out of stock. I am thinking of cancelling
my order to wait for the wristwatch version. Does anyone know if it
will also have the optional GPS module?

Regards,
Jose

I only mentioned main, useful features for the ft-50 and vx-5r that I
thought could make a difference for people trying to decide on either
one. The VX-7R must be in a real serious backorder situation, as
another search to Altavista brought no links. Maybe the FCC objected
the built-in digital cellular descrambler jumpers...

>CW and SSB on satellites. You have to retune to find yourself again.

Heh, ok! I did not go old enough because I am too young :) Sorry Gary !
I can remember those 211 and 251 but never seen them "live" or used them.
So it seems, that Icom has had some problems to decide which way is
the best. The oldest rigs moved bandpass, then became those with
staying bandpass and nowdays they are back with moving bandpass
(is the correct word bandpass or passband.... what's the difference?).

2084. RIB or SOFTWARE?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-22 00:00:00 UTC
From: rbarrios@nacom.es
Message-ID: <7askd2$s1h$1@nnrp1.dejanews.com>
Source record: 116108

Hi. I've got the RIB but something doesn't work. I've got the software and I've made sure that the connections are right. I get clean digital signals (5v-0v) on the bus+ when I look at the scope. This is what happens:

- 10 sequences from the software trying to connect
- 5 sequences from the software + 5 beeps from the GP300
The software shows: SERIAL ERROR - #2 No Acknowledge
- The GP300 shuts down
- 10 sequences more from the software still trying to connect
- The programs show the typical RED error and stops trying
- I have to turn off and on the radio if I want to try again

What is happening? Is the computer (MMX 233) too fast?

THANK YOU VERY MUCH

2102. New wide-band antenna!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-23 00:00:00 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <ATFA2.976$0A4.2599@news.rdc1.mi.home.com>
Source record: 115877
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.scanner

Just picked up a new Diamond RH77CA wide-band antenna!

14.5" long, BNC base loaded, with very flexible 1/8" rubber whip element. 2m/70cm for receiving and transmitting, and 120/150/300/450/800/900 MHz bands' receiving for handheld transceivers/receivers. Gain: 2.15dBi(70cm) - Max. power rating: 10W - Impedance: 50 ohm - Connector: BNC. 1/4 wavelength (2m), 1/2 wavelength radialless (70cm), 8 Band coverage (2 amateur bands, plus 6 more bands for receiving.)

I'm trying this out on an Alinco DJ-X10T hand-held, wide-band scanner. So far, pretty impressive!

Bill Crocker

2104. TH-G71a diode removal question...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-23 00:00:00 UTC
From: melon@martnet.com
Message-ID: <36d333dd.16933827@news.martnet.com>
Source record: 115879

I got the docs from Kenwood FTP site on how to modify the G71... problem is the diodes that have to be removed are so tiny (they're like 3mm long), how do you remove them? Do I have to unsolder them from underneath and then pull out? any ideas? I am pretty familiar with soldering and electronics in general... just don't know how to approach this one...

thanks!

jake

> that goes where the rig goes. Car, boat, airplane, etc.

So a PIC-chip and a calculator case and you've got a remote control.
The PIC's probably even prefer to operate at TTL on their supposed
serial lines same as the radios. Someone should do a PIC-QSYer as a
project article. (See Hagman's articles in Feb and March 99 QST
for use of PICs in radio projects if this is gibberish.)

Oh wait, this is the .equipment group, I should be saying this in
homebrew ... well, consider it a product idea :-)

I have a number of Alnico earphones - suitable for use with a crystal set etc. These come as a single earphone, with a metal headband. Checked and working. (tried each on a crystal set myself). Decal on the eaphone says "Alnico Magnetic" . Made by C.F. Cannon. $10.00US each, shipping included.

2115. FT-50 vs Kenwood TH-G71A

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-23 00:00:00 UTC
From: inks@wish-tv.com
Message-ID: <inks-2302991843140001@192.168.16.69>
Source record: 115890

I'm torn between these two radios. Anybody have any experience with both for comparison? A couple of people here at work have the Yaesu, but I kind of like some of the Kenwood's features - 200 channels, backlit keypad, little higher xmit power, more alpha-numeric digits, etc. The only downside I've heard is the receiver is not quite as wide-banded as the FT-50, which I don't _think_ is a big deal to me.

I need 2m/440, CAP (which is why I'm buying a new rig), and at least receive on our 450 business band repeaters at work.

Thanks for any insight - I'm going to buy in the next day or so.

From: Gary <catlink@erols.com>
Message-ID: <7avrpa$6g6$1@winter.news.rcn.net>
Source record: 115899

Kenwood TR-751A 2m all mode W/TTMic (no tone board) $400.

Yaesu FT-757GX HF all mode W/FP-757GX power supply $550.

President HR2600 (HR2510 CPU installed with Mod) 10m all mode W/Mic/mobile bracket/original CPU $200.

Alinco DR-119 W/TTMic and Cell freq Mod (very cute little mobile) $150.

All radios have never been mobile, owned by a non-smoker, and are in the best condition you could find anywhere. However the Alinco has developed a little squiggley line in the far right part of the LCD display. Its been that way for months so hopefully shouldn't change much and does not interfere with the LCD display. Pictures may be seen at these two links.

Isn't it interesting, though, that Yaesu took the time to send this to Jose R. Camara [author of the VX-7R]. I wonder if C. H. Margelli was bombarded with questions about the VX-7R, or if someone from Yeasu is reading the postings on this newsgroup.

Either way, I think we should give Yeasu some credit for staying in touch with reality...or at least for setting Mr. Camara straight.

...as for you Mr. Camara...that sure was an amazing stunt. I found myself engrossed in the amazing new features you described, knowing full well that some were simply too far out to be true. But I'm sure that some of us simply wanted to believe, even for just a moment, that there might me a radio out there soon that may have some of these features. And if a radio like this really did see the light of day, I'm sure all the features
probably wouldn't even work properly on the first batch of production models from the factory (whether from Yaesu of some another manufacturer).

what is the source of your information?

re: windows NT as the radio's O/S...
that seems difficult to believe. neither WNT, linux nor bsd
are intelligent choices for a radio o/s. is that what you
are saying -- the radio runs WNT as its OS?

Hi,
I have a TV506 with cable and manual. I haven't hooked it up my self
because I bought a IC-706. The person I bought it from said it works
fine. It looks fine.
I'd like to get $100 + shipping from 75042 for it.

Thanks,
Jim McGhee

I have been informed (in a less than polite way) that I was too broad in my statement that I had listed my Henry 2KD5 in this or any other newsgroup and that I had been defrauded by somenon who was using the newsgroups. That was not my intention. My only intention was to warn all of you about this individual in case you might have the occasion to have dealings with him. I never expect to see a dime of my loss again so I had not hoped to gain in any way by my posting to the newsgroups.

So let me be perfectly clear -I DID NOT POST MY HENRY 2KD5 IN THIS OR ANY OTHER NEWSGROUP. I WAS NOT DEFRAUDED BY ANYONE THROUGH THESE NEWSGROUPS.

My ads were all at Internet trading sites and all of them have been informed of the situation, as well as this person's ISP and all law enforcement officials in the respective jurisdictions.

I have slit my wrist and let a small sampling of blood fall on my keyboard in pennance.

Regards,

Gary

2133. FS: Yaesu FT-50R (D'd)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-23 00:00:00 UTC
From: Richard Levenberg <richardl@ufp.com>

I have a Yaesu FT-50R dual band HT for sale. The serial number is 6G060972. It has been modified for wide band transmit. These mods were done by a professional SMT fabricator. It is in the original box, with manual, charger, FNB-41 battery, and antenna. The unit is in good condition.

The following are included:

Yaesu FTT-12 keypad with digital voice recorder and original keypad. (The FTT-12 is installed, the original keypad is in the FTT-12 box)

Yaesu CSC-68 soft case for FNB-41 battery.

Yaesu FNB-42 DC9.6V 1100mAH battery (original box included)

Yaesu adapter allowing use of standard speaker mike (with separate mike and speaker plug) with the FT-50 single plug. The kind that clips to the antenna. I think this is Yaesu model MH34B4B but I am not sure.

original copy of ADMS 1C Software w/Cable (original box included)

$300 includes shipping within the Continental US.

Hi Frank,

With the relay box it is pretty easy to do and will
not work without. On the back of the FT-757 connect
the red RCA plug to the 13V jack. Connect the other
RCA cable to the PTT jack on the rear of the FT-757.
Connect the tx line from the the relay box and connect
it to the relay line to the amp. Run another cable with
RCA's btwn ALC on the amp and the FT-757. The ALC I belive
is compatible so everything should work fine.

Good Luck

I have used an Omni VI with the "plus" ROM modification for the past two years or so. It is an absolutely wonderful CW rig that has given me much pleasure. Customer support from the Ten Tec factory has been very satisfactory and I would rate this a definite advantage over the other manufacturers I have contacted.

On SSB, the Omni VI is satisfactory. Compared to my Kenwood TS-870, the audio recovery is "communications" quality and the transmitted audio leaves a lot to be desired. Since I rarely use SSB, this is not a major drawback. The Omni VI has the best DSP for CW that I have encountered. For all the marketing hype, I have yet to encounter a situation where the DSP in the TS-870 has been useful in reducing noise or making a signal more readable. In contrast, the DSP of the Omni VI almost always improves the readability of a CW signal (although it does little for SSB).

Bear in mind that the Omni does not have a built in antenna tuner and that the built in keyer is greatly inferior to the TS-870. For me this is not an issue since I use my outboard keyer.

I would love to know what others think of the DSP in the TS 870 since I have considered that I am adjusting the rig improperly. Other postings have commented on the apparent noise floor of the TS-870 on CW and I agree that it appears to be a very noisy receiver. As mentioned in the QST review shortly after the rig was released, the TS-870 is very susceptible to interference from strong adjacent signals and this makes it very difficult to use during contest conditions.

What do others think about the Kachina?

Kenwood TS-930SAT with all of the Fox Tango filters.
2 500hz CW and 2.1khz SSB filters. It still has the
original crystal filters to allow very crisp audio.
This is done with the IRCI filter switch kit.
The radio was updated by Kenwood and had the super
alignment by IRCI. I also have the remote tuning knob that allows the
vfo to be controlled next to the keyboard. I have a shipping box, the
owner,
and service manuals.
Asking $1000 + shipping

Icom IC-765 with the stock filters. I have a SM-20
desk mike as well. I have the original box as well as the shipping box.
I have a home brew rs-232 control interface. It has been tested with
CT, NA, TR & LOGPLUS.
Asking $1200 + shipping

Reason for selling, want to upgrade to FT-1000

2171. TS-830S vs. IC-751A Opinions?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-23 00:00:00 UTC
From: Paul Knight <paul.knight@prairiecomm.com>
Message-ID: <7auag3$4o7$1@eve.enteract.com>
Source record: 115982
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.amateur.misc

Hello! Has anyone run these side-by-side? I'd be interested in hearing your comments regarding basic receiver performance in CW mode of the two.

I know the '830 is a load-n-dip radio, and the '751A isn't, so that isn't of concern to me. I'm most interested in basic receiver performance on CW; dynamic range, selectivity, and sensitivity comparisons.

Thanks!

Paul WD8DKY

Might be a grounding problem...fromthe VX-5R message group:

The howling can be cured by removing the screws on the back panel,
and scraping the black paint from the depressions that the screws sit in. This
does not affect the looks of the rig, since the screw heads cover the cleaned
area. Also ensure the screws are tight when you reinstall them.

2184. Yaesu FT-100 rx spec change???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-23 00:00:00 UTC
From: Vito Villamor <vovillamor@yahoo.com>
Message-ID: <36D2D75B.6B7B4EEC@yahoo.com>
Source record: 115995

On 2/13/99, Dan Elekman posted a message asking if anyone noticed Yaesu's specs (in the ham magazines) being different from the specs posted on Yaesy's web site. I can't pull up the original message because it has already expired on my news server. I think there was one reply saying that Yaesu was correcting either their web site, or something about even wider rx range than advertised... but I can't pull up that message either. [It's hard to beleive that my newsgroup server gets rid of from only 10 days ago].

I've been watching this newsgroup and waiting for someone to reply to the original message. I know there quite a few messages posted saying that people were waiting for these radios to arrive at the dealer. But has anyone checked what the actual specs are going to be on these radios?

If the orignal messages are on anyone else's news server, can you send them to me or repost them so the newgroup can be made aware.

---Vito

Cross-posted to: rec.radio.swap,rec.radio.shortwave,rec.radio.amateur.equipment

For Sale: Drake SW2 that I purchased from Universal Radio new 1/29/99 with remote and tilt stand, manual, boxes (double boxed). The radio has seldom been touched because I use the remote. I must sell to help pay for a transceiver. This is one fine rig!

$375 shipped CONUS. That's about $90 less than a new one with same accessories.

Bill K9KZ

2199. TS 940 in Xfiles!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-23 00:00:00 UTC
From: STEVEN L UMBACH <N9ROU@prodigy.net>
Message-ID: <7av0ht$bf44$1@newssvr04-int.news.prodigy.com>
Source record: 116010

Nice to see such a great shot of I believe a Kenwood TS940 and a Shure 444 in the last episode of the Xfiles. I mean they filled the whole tv screen with that thing for an extended view in the dark - it looked huge and extremely impressive! I almost dropped my glass of milk. I have never owned a TS 940, but that big beautiful front panel with that big glowing analog s meter was a sight to see. I can imagine non-hams wondering if private citizens can really own something like that. Unfortunately I own a TS850 and a FT1000MP with digital s meters. Damn - looks like I am going to have to buy yet another rig!

Source record: 116012

I've never heard another one of these on the air:
1975 Uniden 2020 HF transceiver. Solid state with tube

finals (6146). No WARC or 160 bands. Manual, mike and

DC cable included. Works fine. Used for one CW QSO in

the past 4 years. I just bought a TS-50, so this

boat anchor is surplus for my needs. Good deal
for a U.S. ham, given the exchange rate.
$165.00 (U.S.) + shipping.
Let's figure out how to get it from here to there :)

2202. I need the ADMS-1D or ADMS-1E programming software for the Yaesu VX-1R?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-23 00:00:00 UTC
From: Adam Huber <ahuber@csulb.edu>
Message-ID: <36D30E13.5A34E26E@csulb.edu>
Source record: 116013
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy

I need ADMS-1D or ADMS-1E to program my VX-1R. I have an older version of the software that I purchased a while ago. It was the first version and will not work with the VX-1R. I spoke with the company who makes it (not Yaesu) and they are willing to sell the upgrade to me.....for the same price I can purchase it new. That sucks. I already have the cable, I just need the version ADMS-1D or ADMS-1E.

Thanks,
Adam

2204. WTB SHOTKEY DIODE's FOR HP COUNTER

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-23 00:00:00 UTC
From: Paul Van den Hende <paul.vandenhende@ping.be>
Message-ID: <7av2jh$56e$1@news3.Belgium.EU.net>
Source record: 116015

Hello,

Thanks for reading this message.

I'm looking for a shotkey diode bridge (4 diodes in one cabinet), for a HP Multifunctional counter Type 5334 b

Somebody has those, or know where i can find them ? Please mention also the price.

It's for a modification. The prescaler is no problem, but over here in Belgium the diode bridge is hard or even not to find.

The part number is:1900-0083

Best regards

Paul

Source record: 116016

I saw $1300 CASH Price at Lentini. There may be other Dealers who will sell it for that price but want $$$ to make up for the Credit Card Fee they have to pay when you use one.
I still suggest the Credit Card as it has helped me (Platinum Mastercard) get out of a few Ugly dealings with Ham Dealers who sell stuff that dies in 10 days and they refuse to take it back. They say to send it to the Manufacturer.
I call the Credit Card Company and they stop
payment and the Dealer has CHASE MANHATTEN to deal with. HHA HA]
It works every time. Also, I get a FREE EXTENDED WARRANTY OF ONE YEAR added to the purchase. If the radio dies in 1 3/4 yr later it is still covered. Not bad
TIM

Source record: 116020
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Dear Sir/Madam:

My usenet post about the FT-50, VX-5R and a fictitious VX-7R had the purpose of informing potential buyers about some key differences of the two radios, plus add some suggestions for new features to Yaesu, jokingly in the form of a fictitious VX-7R.

I apologize if it has caused any confusion or inquiries about it. I am posting a copy of this in the same lists I posted the original to revert any incorrect impression it may have caused.

I'd also like to congratulate YAESU on two excellent radios, and seriously offer the VX-7R features as suggestions for future models. The anti-theft code would be, for instance, very easy to implement in many current radios and provide great protection, specially for the smaller and smaller HT's.

Regards,
Jose R. Camara

go to the Yaesu Musan Web Site. They have ALL THE INFO there. It appears there is also a picture of the FT-100 SPECTRUM ANYALIZER that is abput twice the resolution of the IC-706 unit. It is mostly in Japanese but you can see the specs in English and the pictures tell a lot about the radio.
The price WILL drop to $1200 as I converted the Japanese price to USA Dollars. The FT847 lists for 210,000 YEN and the FT-100 goes for 148,000 YEN . SO if the FT-847 goes for $1700 USA Dollars (not taking into account the free antena tuner offer) then the FT-100 should cost $1200plus andy incentives that come down the road with time. I for one will wait till the bugs are out like on the FT-847 and the price to fall.

This does not sound right. RT Systems will upgrade you to their newest version
for twenty bucks - plus minimal charges for shipping. Are you really a
legitimate purchaser of their software?

Heck - I am two Updates behind - and RT Systems is upgrading me to the newest,
VX-5R-compatible ADMS-1E v2.0x version for only twenty bucks.

> I'm torn between these two radios.

Gerry - the Yaesu FT-50 is an extremely comfortable HT for medium-to-large hands. It just lays in your left hand, and you can change channels, adjust the volume, open the squelch, turn on the display lamp, key the mike, and turn on/off the power switch...ALL with ONLY using your thumb.

I use the ADMS 1-E Programming software - and it's great. Newer/current versions of the software allow ASCII data file importing and exporting, which is a really useful feature.

I use FNB-47 (7.2VDC) batteries for my FT-50 as well as my Vertex VX-10 commercial HT. Maha makes them in 1800MAh NiMH packs. Properly conditioned and charged with the Maha MH-C777a NiMH/NiCD charger, they have served me extremely well in daily use.

RAM has to be replaced every 10...15 years. 751A has better front-end.
751A has better dynamic characteristics. And, yes, it has that battery :^)
I'll newer sell my 751A. If I buy (better?) hf rig I use 751A with transverter
to work VHF/UHF/SHF.

Source record: 115836
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

For Sale or Trade:

Galaxy V Mark II HF transceiver with optional 100 KHz calibrator
and VOX modules installed, and matching power supply. No manual.
Picked it up at an auction. All tubes good (I replaced three duds).
Checked for basic functionality. Receives on all bands. Calibrator
works. Loaded transmitter up to 200 W output on CW on 40m and 20m.
Sidetone and semi-breakin keying work fine. SSB not tested (I have
no mic to try it with). Rig is quite clean, definitely the best
I've ever seen. It needs only a light cleaning. Only mod that I
can spot is the mic jack (changed from 3/16" to 1/4" style), and no
repairs that I can spot. I would consider this to be a project rig,
since I haven't fully tested it and cannot guarantee it's 100% ready
to go. But... it shouldn't need much work, if any, to be usable.

Will sell for $125 plus shipping, or trade even-up for a Drake 2NT
novice transmitter, or trade plus cash for A Drake T-4XB and AC-4
(I have a nice R-4B that needs a mate!).

I have the FT-50, and it is a nice radio. Easy to use, small size,
etc. The only things I don't on it are: the speaker/mic jack is on the
side, and the SMA antenna connector is kinda weak if you ever sit on the
radio (radio fits well in back pockets!). The 100 memories are enough
for me, the difference in transmit power is not going to make any
difference at the other end of things (but it will eat up your batteries
quicker), the backlight on the radio is nice, and there are plenty of
mods for the FT-50. I don't have any experience with the Kenwood, so I
can't commment on that radio, but I would most likely buy my radio
again.

Source record: 115848

I have a Kenwood TM-731 DualBand Mobile forsale.
440MHz watts are fine,but 2 MTR only does about 7 watts.
And the bulb behind display is off.
But you see frequencies fine on display.
Mic/power cord.
No manual.
Price: 160.00
Email,Rich.
ps: I thought it was sold a month ago on the net here,but the person
never bought it.
I think I gave him plenty of time,so its back up forsale.

2237. for sale or trade Sangean 803a

Newsgroup: rec.radio.amateur.equipment

The pack is glued together. I hit mine with a hammer all around where it is put together. Not very hard.. Then take a screwdriver and prised the tab at the top up slightly. Then starting at the top , put the screwdriver in the gap and start prising it apart. At the bottom there is a small tab on each side that helps hold the halfs together. Try to work from the top (the part that goes toward the radio) down as it wants to hinge open .

2247. IC-2710H

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-24 00:00:00 UTC
From: Turner Morgan <tfmorgan@thebee.net>
Message-ID: <7b22j3$836@enews4.newsguy.com>
Source record: 115859

Does anyone have or know of the source for any mods or improvements to the ICOM IC-2710H dual band transceiver?

Also, any word on when ICOM will offer the Windows programming software for actual sale? Right now, it is just vaporware, doesn't exist at any of the dealers I have tried, even though they have been carrying it in their catalogs for several months.

Thanks,
Turner WD0FJO

I had a novice license 25 years ago. I am back into amateur radio and just earned my tech+ license. I am looking for a reasonably priced HF rig (reasonable is subjective).

It must be solid state and in good operating condition. 160-10 meters, AM/SSB/CW. At least 100W output. I am looking to spend between 200-400US$ including power supply & mike. I am located in located in the Philadelphia area.

Thanks,

Stephen Kraiman

FOR SALE: Hewlett Packard model 608F RF generator. 10 to 455 Mhz. A little dirty; should clean up nicely. Has RF output, can't seem to get modulation to work. Modulation oscillator (classic HP oscillator circuit, with light bulb, etc) works just fine; both 400 and 1000 hz. Followed signal to circuit board, and I'm not sure where it is supposed to go from here. Since I don't have a schematics, I'll let the next owner deal with it. Tag above model number plate says "U.S.A.E.C. / Nevada Test Site", and has "atom" symbol. Way cool! Althought it doesn't produce any heat unless it's turned on. At least I don't think it does! Located in Portland, OR. Will ship anywhere in the continental US via UPS for an additional $40, although I'd rather it be picked up here in Portland, OR. Please respond to <mkepp@hevanet.com>

2266. batttery voltage factor

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-24 00:00:00 UTC
From: brycelee@globalserve.net
Message-ID: <36d349a0.15234912@news.globalserve.net>
Source record: 115919

I have a Yaesu FT - 530 handheld, purchased used earlier this year.
Two batteries were supplied.
The first labeled Yaesu ENB-25 7.2 V, 700 MAH manufactured by E.H.Yost & Company;
The second is MU-FNB-27 is a MAHA Ni-MH battery Pack, 12V DC, 900 mAH.

With both batteries, seemingly fully charged the radio performs well, for about the first hour or two. The readout on the FT allows one to monitor the voltage, and both batteries do read full voltage when charged.
Very suddenly, the voltage (and I'll use the 900 mAH battery as the example), the voltage drops to 9.0 volts then maybe ten minutes later drops to 5.2 volts. At this point the LCD display flashes indicating imminet shutdown.

The ENB-25 does the same thing although in a shorter time span.

I have noted previous discussions as to the viability of certain after-market batteries; could this be a problem? Incidentally the large battery was purchased new 18 months prior to my purchase of the radio although not here in Canada.
Now the strange thing.
If I then turn off the radio (with the flashing display) and remove either battery from the radio, and then replace the battery, the display returns to a 9.0 volt reading and maintains said voltage for say andother hour or more.

The contacts on the batteries and on the matching radio are clean and in good order.
The batteries have always been charged using a Yaesu NC-42 Quick Charger. I have also used the "slow" charger from Yaesu NC 28B

The question: is this normal for this type of battery?
If not what may be possible solutions?

I have a very nice KWM-380 ... s/n 257 for sale. It has all the filters (140 / 360 /
1.7 / 2.1 / 6.0). It also has the control interface. The radio has the WARC chip in it so it transmits on all the amateur bands. The front panel and cabinet is perfect. The radio has all 18 service bulletins installed except for #17. SB #17 makes the radio compatible with the CU-380 antenna coupler. It was not a manditory change.

So you don't have to ask, the noise blanker and speech processor is not in the radio. The radio also has the service manual and a copy of all the service bulletins.

If you are interested, give me a call at 614-764-5872 or respond via e-mail. Pictures are available at http://members.aol.com/k8ra then look in the folder KWM-380.

Price ... $2700. plus some shipping.

You obviously aren't a small business owner, Gerald. I doubt you have ever
successfully marketed anything in your career. No matter.

Why you perceive a problem with someone who just hung up with RT Systems and
discussed this very matter and found out the truth is beyond rational thought.

Work on your inner anger somewhere else, would you please? Your
anti-Clint rantings are in no way in the true spirit of what Amateur Radio is
supposed to be all about. In the mean time, I will continue to support those
firms that treat their public well. And RT Systems treats their valid customer
base with respect and excellent products.

2276. FORSALE -Ken TS-520S w/CW filter, mic, MFJ tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-25 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <7b4ak8$ali@nntpb.cb.lucent.com>
Source record: 115729
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S that I would like to sell.
In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option). Also included
is the Kenwood hand mic and (if you need it) an
MFJ antenna tuner (I forgot model no - older unit
but works fine).

The price is $350 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

Ain't never heard of an RCI-3500...must be an export radio or something?

You sure it ain't a 2970?

2280. Re: VX-5R: how do you delete a memory channel?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-25 00:00:00 UTC
From: Larry Benko <benko@aztek-eng.com>
Message-ID: <36D5BA75.6A7FDC3A@aztek-eng.com>
Source record: 115733

Hi,

I have owned a VX-5R for a few weeks and to the best of my knowledge you CAN NOT erase a memory channel short of doing a reset which erases them all. You can mask a memory but when doing so the channel is treated differently than an unerased channel which shows an asterik when doing a memory save. At first this bothered me a lot, but now it actually it kind of cool since restoration is so simple. By the way how do you like the HT. I got reports of low audio on mine at first compared to other radios that I own, but I increased the audio gain on all 3 bands and all is better now.

Larry Benko, AC0B

In article <charles1F7q6AC.Bvr@netcom.com>,
charles1@netcom.com (charles copeland) wrote:
> Who has prices on VX5 ?

Dealers do.

In the case of the VX-5R, I sure would want to know the EXACT production run from any dealer I'd do business with BEFORE purchasing.

Ham Radio Outlet in Anaheim, CA has the most current production run of VX-5R HTs available.

Within California, 1-714-533-7373. Outside of CA, 1-800-854-6046.

No shipping fees on orders over $100.00, I believe.

They were made awhile back. They have grey faces, single LED displays for each digit in the freq. you are on with a toggle under each digit to adjust up and down. My best friend had a AR-3300. Great mobile rig!!! You can program them to do all kinds of cool stuff!

That requirement is easy. Even the Rat Shack unit, now discontinued, did good on CW. Most of the pricey ones do better on voice, but narrow, phase linear filtering for CW is the easiest chore for all the DSP chips. If indeed, CW is all you want, choose by price.

PLEASE remove "no-junk" from my e-mail address to reply or call (206) 405-2083.

I want to trade for a WinRadio, An Optoelectronics Scout and a Base dual band (2m/440) good quality ham radio no older than 3 yrs (like Kenwood TS790, Yaesu 736, Icom IC 820 or 821).

Would you be interested in a trade?
Pictures of items that say "on the net" can be found at http://pobox.com/~sci/Forsale/For_sale_pictures.htm
. Call if you see something of interest 206-405-4306 -Ron

TRUCK
-Pickup, 87 Jeep Comanche Pickup with Canopy, 4 cylinder, 2-wheel drive. New engine with 5 year 50k warranty (4 years left), new clutch, new muffler, Sony CD player (35 watts per channel @ detachable face) with 4 speakers, lifetime gas shocks, lifetime wheel alignment. Tuned, aligned, tires rotated and balanced 12/98. Changed rear differential and transmission fluid 1/99. Black truck with white canopy. Runs great. (Picture on internet) $2795.

ELECTRONICS
-Police Scanner, Desktop & Mobile, AOR Communications Receiver (AR2002) Continuous coverage 25MHz - 550MHz and 800 - 1300 MHz with 20 channel memories. That means NO blocked frequencies in those two zones. Receive modes are NFM, WFM, and AM. Accurate receiving frequency by PLL synthesizer circuit. Multi-functional LCD display for frequency, scan, mode, search, time. Easy and efficient keyboard operation for frequency selection and various modes. Has computer interface port, headphone and external speaker jacks. (Picture on internet) $225

XXX

-Police Scanner, Mobile, Bear Tracker BCT-10, highway patrol detection with strength meter, highway patrol coverage, local police coverage, pre-programmed scanner covers all 50 states plus Canada (just tell the unit what state you are in), 9 level strength meter, instant weather, built in speaker, windshield mountable, buttons include: alarm off, mute, mode, state, hold, lock-out. Squelch and volume control, external speaker. Includes antennae and windshield mount. $125

-Police Scanner, Desktop. Radio Shack Pro-2032 with 200 channels in 10 banks, hyper scan, etc. Great and reliable unit. $115

-27" Stereo TV, RCA (model F27631SF), s-video, remote control, ability to name channels onscreen, sleep timer, alarm clock, closed caption, previous channel (allows us guys to jump back and forth between two channels), "30

second skip" (allows you to wander the channels for 30 seconds per time this button is pressed and when that time is up, it jumps back to the channel you started at, perfect for avoiding commercials - another great guy feature). A perfect picture. Owners Manual. $200.

-Laserdisc and 5 music CD Player, Pioneer (CLD M301) allows you to shuffle 5 music compact disks or watch a laser disk. Many features. Works perfectly. Surround sound. Includes remote. $175

XXX

-Power Supply. (Astron RS-20A). Perfect for HAM applications. New in box. $100

-Fax/Answering Machine/Copier in one. Panasonic KX-F90 stand alone fax, answering system with copier. Resolution = standard, fine, super fine. 10 number programmable speed dial. Digital outgoing message, incoming on micro cassette. Fax poling capable. Works perfectly. $55

-Alpha-Numeric Pager with alarm, news, stocks, sports, weather, trivia updates. Motorola Advisor Pager. Included free (even before you subscribe to the paging service), you will receive stock updates, head line news, weather, sports and trivia on your pager! This pager sells new for $149.95. Also comes with alphanumeric software to distribute to your friends. You can also receive e-mail with this pager! I am selling the pager with four pager pouches and instructions for $55 (picture on internet)

-Bookman, Franklin calculator with advanced thesaurus, and changeable cartridge port. Also a calculator. Comes with Miriam Webster Dictionary cartridge, games included. Can purchase Bible cartridge, bartending, language translators... all still on market. Unit sells new without cartridge for over $80. Asking $29.

-Walkman, Panasonic water resistant Shock-Wave Cassette/AM/FM "walkman" player. Digital radio tuning, five memory buttons, auto reverse, and headphones vibrate with bass tones so you can actually feel the music! Hand strap for jogging and belt clip. $30

-Car Cassette/AM/FM stereo (JVC KS-R135), digital tuning, separate bass/treble, front rear fader. Perfect condition, $35.

-Dual Band Ham Mobile. Icom IC-2350H. TX 144-148 at 50/10/5 watt. (Rx 118-174) & TX/Rx 440-450 at 35/10/5 watt. Built in cooling fan. Cosmetically and functionally, perfect. Owner's manual and mic included. 50 memory channels and scan edge memory channels. Scratchpad function. Priority watch function. Programmable function button on mic. Pager function. Time-out timer, auto power off, mono band operation. (Picture on internet) $300.

-Telephone, 2 line, large LCD screen, caller ID, speakerphone, Northern Telecom (350), redial, upgradeable, printer output, directory, line in use indicator, voicemail compatible. Sells for $400 at GTE Phone Mart. The best phone they sell. $125.

MISC
-Leatherman, LM-18 Wave. 4" closed. Brand new. All stainless construction. Includes built-in wire cutters, needlenose pliers, phillips screwdriver, standard screwdriver, wire stripper, can/bottle opener, extra small, small, & medium screwdriver, scissors and lanyard attachment. Also has four locking blades (clip, serrated sheepsfoot, diamond coated file and wood saw) that can be accessed without opening the tool. Nylon sheath. Retails for $115.95 + tax. I want $75.

-Knife, Spyderco Mariner folding knife with metal belt clip. All stainless AUS-6 blade with thumb hole pull. Brushed stainless handle with lanyard hole. Back of handle has belt/pocket clip. Sells for $98.99 + tax. Asking $50.

-Clock, Seiko brass clock with world time, second hand has airplane on tip. Beautiful quality and condition. $100. (Sorry, price not negotiable) (Picture on Internet)

-Inline Skates, Rollerblade Metro Blades. Removable Tennis show allows skating downtown and popping off the blades, or how about on the way to class, and then just undo buckle and you have a regular tennis shoe! Cool, No? Wheels, brake and everything else in great condition. Men's size 9 1/2. (Picture on Internet) Asking $40

Early versions of the VX1R could not be programmed due to a problem with the radio. If you own an earlier version of the software, why not find out the serial number of the radio and give RT Systems a call? If your radio is programmable, RT sells the upgrade for $20.00 as stated in the other message.

We have for sale (1) Kenwood TS-440S/AT radio for sale. We are asking $600US. The radio is in 8.5-9/10 condition with only minor scuffs on the top of the unit.

Has spent most of its life in the box (was for a project that never got off the ground).

Comes with original packaging, user's manual, and hand microphone.

The radio has had the extended TX modification done.

For more information check out the web page below.

Remove the capital letters from the reply email address (NOSPAM).

Thanks!

2309. Re: FT-50 vs Kenwood TH-G71A

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-25 00:00:00 UTC
From: drgrant@ziplink.net
Message-ID: <36d4b7c2.469657521@news.tiac.net>
Source record: 115785

It dont matter much on the 50 anyways, becuase even if it has bigger
RX range, Yaesu is notorious for providing extra RX range and making
the radio deaf outside of the typical range anyways! :)

I have a G71 and it will do all that you ask of it, and
more. Mars/Cap and extended RX mod is easily performed
with 5 minutes, a few tools, and a soldering iron. Will even pick up
cell images nicely, if your into that sort of thing... the reception
is so strong it's almost as if its been ENGINEERED that way
right into the radio.

Only problems I have with the G71 are:

-Power output levels are rather polish. (theyre basically "full
output, really low, and really really low... theres no 1W or 2W
setting. low is 500 mils and el is 50 mils, and hi is whatever the
limit of the attached pack is...)

-Speaker Mic connection is polish; the speaker is in the 1/32 jack and
the mic is in the 1/8 jack. Gee, kenwood, thanks for forcing us to
use your speaker mic, and thanks for making us use a damn adaptor
when we want to listen to audio on an external speaker.

-SMA connector. This isnt really a downside but more of an annoyance,
as direct SMA > bnc adaptors can injure the tiny SMA connector.
Someone must have an SMA > BNC dongle cord assembly, that would
provide some strain relief.

-Battery charge issue; batteries have to be attached to the radio in
order to use the supplied wallwart to charge them.

Overall though, I think the G71 is a much better radio. It's still
a potato but doesnt seem to have the "crappy feel" and the operational
ergonomics nightmare that the FT-50 presents to the user.

-Mike

Actually you have got this wrong,(looking at the Japanese site) it will be using a version of windows lite, like what is found on the sharp and HP palm-top computers. This means it should be able to run various Packet programs etc. This is all a nice feature coupled with the relatively large colour LCD display. Roumors sugest various slow scan formats will be available and operate with the wast digital audio processing available from the TI RISC chips being used. cheers Eric ;-)

2321. QUERY - ICOM RADIOS - Which Ones Fit Description? AND, SE US area, Malicious Interference Information

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-25 00:00:00 UTC
From: "Todd L. Sherman" <afn09444@afn.org>
Message-ID: <Pine.A32.3.95.990225034619.28712A-100000@freenet2.afn.org>
Source record: 115797
Cross-posted to:
rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,alabama.birmingham.radio.amateur

(Would appreciate direct replies to _afn09444@afn.org_, please -- if only because its faster and more convenient to pick out of the personal INBOX. Thanks. -Todd)

Which of the available Icom radios would fit the below description? We're trying to figure out the capabilities of a trucker (an Amateur Extra-class ham [unfortunately] with a vanity callsign) who has been causing malicious interference to repeaters in many counties here in Florida (whom we once TAILED through three counties), and possibly in other southeastern states along I-95 and I-10. For examples: Can he scan 440? Can he monitor two freqs simultaneously? Can he hear another frequency/channel at the same time as he is transmitting? ...Things like that.

- Operates on 2-meters
- About 50W max output
- SSB capability

Also, can anyone suggest inexpensive doppler DFing equipment that isn't limited to the possibility of damage with 100 microvolts RF or more? We'd like to get SOMETHING up in the area, fast.

He ALWAYS operates during working hours when our beam stations aren't home, and getting fixes on his position lately are near impossible without sitting 24 hours a day along the highways that pass through our county and watching for every occurance of a white, box-cab, flat-top, cab-over, cab-forward FREIGHTLINER model with "Intermodal Trucking Company" on the doors and a 1/4-wave mag-mount mounted forward center that goes by. (Oops! Did I just blab? Shame on me! 8-))

He's been harrassing us for almost two years straight now. I don't think I need to iterate our feelings towards this obvious mental case.

Some of his "usuals": 6-9, P-P, 5-5-5..., *-*-*..., B-A-D, overheard phone numbers, etc., in RC-85/850 DTMF pad tone tests; prank calls to innocent people and to 9-1-1 Dispatch; garbled voices; burps; Auggie-Doggie-like snickerings; interference to QSOs, to ongoing casual and emergency nets; always unidentified; at times at ANY hour of the day or night. 2:30am, 4:30am, 5:30am, 6am, 7am, 9am, noon, 1pm, 2pm, 3pm, 4pm, 5pm, 9pm, 10pm......He covers the darned whole clock.

He seems to "hang" in Marion County, south of us here in Gainesville, Alachua County, Fla. We suspect he often sits in truck stops between here and Ocala because he always seems able to get into both area's machines at

will. He's never gone for more than three days before returning again, suggesting he's grabbing loads possibly in other states and bringing them back here, where he causes interference again for anywhere from one to four days in a row. He varies his power to try to fool, goes to high when local stations are just too powerful to allow him access to the repeater and sometimes succeeds in overriding stations almost right BENEATH the repeater. We know he's affecting repeaters in Duval County, as well; HAS affected (but stopped) repeaters in Clay and Bradford counties; and possibly affects repeaters in Pinellas and Hillsborough Counties. They all report near-exact MOs. Each reports open-access patch repeaters being changed to coded-access patch repeaters -- if the patch hasn't altogether been removed. When this "jammer" goes through, defenses vary from changing from open to coded patch access, to all special user functions being disabled during, to the complete shut-down of repeaters. Very unfortunate.

Even after having once been TAILED by THREE of my MIF team trackers, and VIDEOTAPED, he STILL continues on. He's obviously got a mental problem as well as an addiction he just can't put to rest.

We _do_ have a case number with the FCC, yes.

How many other repeaters along the SE seaboard coastline are now either patch-less, or now no longer open access because of this guy? We'd like to know. It might also help us to figure out this guy's approximate "range" of affect.

He's sabotaging the hobby, this jerk.

Thanks,

Todd

: recieve cellphone at around 980 Mhz.

This is correct...to be more exact, the high IF is 45.1 Mhz in the
800-900 Mhz range.
So the images are 90.2 Mhz above the actual desired frequency.

Do you mean to say Windows CE? My beta version of the 7X is an all mode transceiver which synthesizes its modes in software. To add modes, you simply install new software - kind of like the commercial modems used by ISPs. Perhaps the more recent versions have streamlined the software, but my version takes nearly six minutes to boot and to load all of its software under Windows NT workstation.

If the SWR climbs above 1.1:1, r.f. creeps into the microprocessor and Windows gives you the blue screen of death. Sometimes you get the blue screen of death "just because" (I forgot to mention that the radio has an LCD SVGA display).

I find that I get foolproof operation if I limit the use of the radio to playing the solitare game that comes with Windows. YMMV.

>available here in Australia for 2 metres. However I would prefer one for
>both bands.

MAHA makes a couple of models. One is a "brick" that sits somewhere
separate from your HT.

The other is a "docking booster" that provides a "fake battery" for
your HT to mount on. You remove the HT's real battery, mount the radio
on the amplifier's "fake battery" which supplies power to the radio,
and connect a cable to the HT's antenna jack. It's a nice way to
provide both power and mechanical support to the HT.

I think both of these use an RF path design that leaves the 440 receive
path open when transmitting on 144 and vice versa. So if you have an
HT that will do cross-band repeating, it will still perform that function
when connected to the amplifier, giving you a high-power cross-band
repeater.

Message-ID: <TFSQWQMQ@littlewoods.co.uk>
Source record: 115807

Hi Folks,
My 290r2 has drifted slightly off frequency since purchase in the late eighties,
Tx and Rx both by same degree, does anyone know a simple adjustment to
bring it back on frequency. This doesn`t have to be fantastically accurate, just
enough so that I get a solid response from the signal strenth meter on FM receive
and stations on SSB are roughly at twelve o`clock on the clarifier.
at the moment I need to have the clarifier all the way clockwise to get close.
I will be using relatively accurate on and off-air frequency standards.
Thanks in advance, Gary - G7TOK.

While cleaning out the shop, I found a box of Moto OEM STX batteries.
Although they have been in storage for awhile, they look pretty good.

I tested all and tossed the junk. The remainder of the batteries were
conditioned on my Alexander Optimizer.

Batteries are $20 each, 2 for $30 or 3 for $40. I have about 15 left.

MOST are at least 1400-1500+ mh strong. All are guaranteed to have at least
1000 mh of power.

Hi folks :) I'm an electronic musician *seriously* looking for the following musical equipment, in any condition, even broken:

- OLD SYNTHESIZERS (from the 60's-80's)
- OLD KEYBOARDS (w/ knobs or sliders)
- OLD DRUM MACHINES
- OLD SEQUENCERs (w/ knobs for each step)
- OLD VOCODERs ("robot-voice" sound)
- MODULAR PATCHABLE SYNTHESIZERs
- RACK SYNTHS
- INTERESTING EFFECTS and anything related to the above.

Moog
ARP
Korg
Roland
Sequential Circuits
Oberheim
Yamaha
EML
Electrocomp
EMS
Synthi
Putney (VCS3)
RSF
Buchla
Serge
Polyfusion
Ionic
Paia
SMS
Wavemaker
E-mu
Steiner-Parker
Chroma
Aries
ANYTHING SIMILAR!

- Roland TB-303 Bassline
- Roland TR-909 Drum Machine
- Roland TR-808 Drum Machine
- Simmons SDS7
- Simmons SDSV
- Pearl SY-1 Syncussion

- E-mu SP-1200 Sampler Drum Machine
- Sequential Prophet VS rack
- Oberheim Expander
- ARP synthesizer model 2600
- Korg MS-20
- Korg synthesizer model ms-50
- Buchla Electric Music Box
- Buchla Music Easel
- Oxford Oscar w/ MIDI
- Sequential Circuits Pro-One
- Multimoog

Also looking for old literature on electronic music and synth equipment...

If you have any of the above OR SIMILAR for sale or know someone who might, please email me at rolandman1@aol.com and include phone number as well if you'd like.

Thanks in advance and apologies if this post annoys anyone.

Greetings, all...

Our organization is planning on purchasing an all-mode VHF/UHF
receiver/scanner. If the constraining factors were that

- It has to be US legal
- Price must be under $3000

What would you get? ICOM R-8500? AOR AR-5000+3? Something else?

The receiver will be used in the following ways:

- Telemetry receiver for satellite/deep space probes
- As above, but with input from a microwave downconverter
- "semi-amateur" radio astronomy

The receiver will be in a weathertight building but the building
has no heating or cooling.

I'd appreciate your thoughts on this, and *why* you feel the way
you do -- in other words, "AOR radios rock!" isn't a good reason. :-)

Thanks in advance,

Eric

> :Larry BEnko, AC0B

Sorry for stepping in where I've not been asked, but...

I purchased a VX-5 about 3 weeks ago now and have used it enough to know a bit of what it's capable of...

The transmit audio is good, as is the audio, the wide FM recieves very well (quite in contrast to my FT-50R, where the bandwidth provided isn't enough).

The 'adjustable antenna' is a simple rubber duckie with 2 tips. A larger one for <50 mhz work. I leave it on all the time with no noticable detriment to my work on 73cm and 2 meters.

There have been some problems- The antenna connector has already come loose, and since the nut is so far recessed, it has been a pain to tighten. Locktite fixed it. Intermod on 440 makes that part of the radio useless as long as I am around work, or in heavy intermod areas. The ICOM and other Yeasu's that I have don't suffer from this to nearly the same degree. This is almost (but not quite) as bad as my FT-530 was before I sent it back.

Battery life on the included battery is only about 1/2 of a seperately bought one (of the same type.) That is almost certainly going to have to go back to Yaesu.

Other than those little quirks, the radio has been a joy. The optional SU-1 unit measures altitude and barometric pressure, and is fun. The battery charger is quick and efficient.

JD

A modem just modulates and demodulates data so that it can be carried
over an analog facility. Radio modems may or amy not also control
things like PTT. A "terminal node controller" does that too - but it's
also a packet assembler/disassembler (PAD).

We are in W. Lafayette IN. And, yes, it is a
RCI 3500. A couple of years old. And no
one has made an offer yet.

David Fisher <dfisher@indy.tds.net> ...
:Where are you located??? This is the AR-3500 right??? Thanks in

Consider trades?

I have a number of mint condition Black & White CCD cameras. Follow the below link toview . They are very small encased
C-mount cameras(I have some lenses for sale as well) They were purchased new for $249 each. I will sell for $150 each, or can
work out a deal for qty.

http://www.polarisusa.com/pi2201.htm

I have a NEW Vivitar Vivicam 3000 digital camera with 2MB flashcard installed. Comes with all manuals, software, cables,
boxes and batteries. I used few days for a specific case and have no further need for it. Great camera, see specs at link
below.

From: Bob W7KWS <rmfuller@hotmail.com>
Message-ID: <7b7uap$1ab$1@news-1.news.gte.net>
Source record: 115632

Jerry,

I did the same thing. A friend and I each bought a VX-5 and found the radios useless if we were using PL. We returned them to AES. By the way, AES was great in taking care of us.

We use our hand helds at Dayton every year where PL is mandatory to keep out the intermod. Also, intermod was pretty bad compared to my Standard Wide Bander. I would guess there was five times as much intermod in the VX-5 sitting side by side in downtown Las Vegas.

I hope Yaesu solves these problems, because if they do, this is a dynamite radio. I'd love to have one again if these problems are resolved. 5 watts in such a small package and with the shortwave and 6 meters. Yaesu is on the right track. Just needs a little more tweeking.

73, Bob

The H/P cross reference for H/P part numbers to JEDEC number shows the
1900-0083 to be a H/P 5082-2831. You will have to find H/P distributor in
your area to find part. It is a "Low Vf Monolithic Match Schottky Quad". I
think it will be hard to find. Databook says to consult local H/P Sales

The 1271 was awful and very unreliable.

You would be better building or buying something a lot newer.

Take a look at my web site - you will find a few good kits on there.

Message-ID: <VizB2.809$oe4.126123@homer.alpha.net>
Source record: 115683

Hello all:

My name is Josh and I have a problem with the VX-1R. The problem applies to the VHF Ham Band and the UHF Band. All of a sudden, frequencies are drifted 10khz or 40khz. Here's an example. I have a local 147.060 repeater in. On 147.060 it is very disorted, but if I turn to 147.040, its sounds normal and I can access the repeater. The same idea works for UHF Ham Band.

Why is it doing this when all the other bands are working fine and everything else is fine.

Any suggestions, leave a direct e-mail message to lhousey@excel.net rather than to the newsgroup, and I will read replies on the newsgroup as well.

All replies will be appreciated.

You get to know and trust your dealer...Current production models (as of last week) of the VX-5R contain the "8C03" coding in their serial numbers. This is at least the 3rd production run (8N01 and 8N02 were previous production runs).

John:

If I were to have to choose just one HF rig for all-around home & mobile use, I'd have to go with the Kenwood TS50.

No, it doesn't have lots of cool knobs and buttons, but it's got everything you need to do DX on all HF bands.

Best of all, it's a GREAT value on the used market.

You should be able to pick one up in "cherry" shape for about $650.

I recommend you DON'T get the optional AT50 autotuner. Just get a GREAT antenna system instead and you'll do MUCH better (and cheaper to boot).

Rudi - KF6RLQ

I've found that if it is a removal, and not a move (no need to reuse the diodes) you can simply use a small (real small) pair of needlenose pliers and crush the silly little things. Be very carefull doing this so you dont scar or accidentally cut any traces on the board ***If you do it this way, and want to put it back at a later date guess what...you're screwed!
Hope this helps!

>Tnx: Jim Stone

In my opinion, the NIR-12 is the best of the lot, for any mode, including CW.
However, none of them will get rid of all reciprocal mixing artifacts due to
phase noise in the receiver's local oscillators. All of them will give you a
good narrow passband, but whatever falls in that passband will be passed
through. (There are noise reduction modes that work fairly well in some of
the boxes, and those in the NIR-12 appear to be the best, but anything that
resembles a legitimate signal will be inseparable from a legitimate signal.)
Buy any of them you like, but if you want to get rid of artifacts due to oscillator
phase noise, you're going to have to get rid of the phase noise at the source,
IE clean up the oscillators in the radio.

It has been held that the sending in of a registration card is not necessary in warranty or support cases. IMNSHO, all it does is get you on mailing lists that propagate like wildfire. Most of the time, I need nothing further from the manufacturer. In the small cases in which I DO need more from the manufacturer, I provide them with the necessary proof of ownership, if asked.

I have no gripe with RT Systems per se, except that I think they are WAY too paranoid in their copy protection scheme. Every time I defrag my hard drive, I have to reinstall the software. That torques me to no end. As soon as the Linux software is available, I'm switching.

How did you change the audio levels?

Also, how does your radio receive on the AM Bcast, FM Bcast, and other non ham bands. I just got one and the receive is awfull - ranges from no sensitivity to overload with several stations heard at the same time (esp. on FM Bcast). I put the VX-5R side by side with an ICt8 and the Icom wins hands down. The 2m and Wx receive seem just fine - just the non ham freqs are bad.

Bill

I have a COMPLETE SET of QST magazines from 1980 through 1994
(15 years, 180 issues!) that I need to sell. I'd love to
keep them but just don't have the room. They are in very
good condition. This is a fantastic resource for anyone who
is seriously interested in Amateur Radio.

I'm asking $100 for the entire set. You pick up in NJ or pay
shipping. If interestd, make an offer.

Thanks.

Source record: 115706

I have the above mentioned item for sale. It is in good condition. I have a brand new keypad for the radio that I am going to install. The old one is not too bad (the numbers are still legible) but if I sell it I will install the new one unless you want to do it yourself. It includes two Ni-MH 5W,12V packs that are 1300mA. I bought these batts from Dayton last year. They have not been used more than 5 times each. Also comes with an MFJ mic (basic mic) and the drop-in trickle charger which takes 14 hrs to charge the batts. If interested, email me above and make me an offer for everything. S/H will probably be an extra five bucks or so.

Bill-

I used the TS-50 from the time it came out until the Icom IC-706 came
out. I have no doubt that the TS-50 is a better rig, even though it
doesn't have all the features of the 706. If Kenwood came out with a
revised TS-50 that had Six Meters, I would grab one.

I also used the AT-50 tuner, which is good for extending the range of
mobile whips. It covers most of the 40 Meter band with a Hustler antenna
on a magnet mount, but doesn't quite cover the 75 Meter phone band.
Without a tuner, the 75 Meter resonator bandwidth is around 30 KHz.

In contrast, the IC-706 matching AT-180 tuner covers about 2/3 of the
range of the AT-50.

I have used these rigs for mobile operation exclusively. There may be
better choices for a desk-top rig where space isn't a concern. For
example, I have the CW filter for the TS-50, but it is not convenient to
switch it on and off.

A note of caution on crushing the diodes. You can lift a trace they are
soldered to and when that happens sometimes they don't work. Best to
unsolder them.

2404. Mods to HP8558 spectrum analyzer ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-26 00:00:00 UTC
From: adrian@fangorn.demon.co.uk
Message-ID: <7b73oj$c5d$1@fangorn.demon.co.uk>
Source record: 115715

Older models (pre 1981) of the HP8558B spectrum analyzer plug-in require
a modification to work properly with the HP853A mainframe.

I can guess some of the details of these mods from the 853 and 8558 manuals,
but I'd prefer to find out the real modlist.

Is there someone with a late-model 8558B (serial 2147Axxxx or above)
that can look up a couple of pages for me ? Or better still, a copy
of the modification instructions (00853-60058) ?

-adrian

You know I heard that if use an HT after year 2000 that the air pressure around the antenna will decrease so rapidly that a vortex will form around the HT and the user would be sucked up into the sky and Chicken Little will run around saying the sky is falling the sky is falling.

Please do not take this personal but I think this Y2K thing is totaly blown out of scale. The media is to blame for creating this scare. I feel that your concerns are legitimate but how does your HT know what time it is? How does your VCR, or your TV, microwave, toaster, coffe maker know what time or century it is in. If it is programmable you simply change the date to one that works. There is more concern for the social infrastructure that depends on accurate dates ie) banks, food chains, air-ports, train stations etc. I mean I would be more concerned that I had power to my house on January 1, 2000 than if my HT is going to work. January 1, 2000 will be just like any other day of the year, the sun will rise and it will set. What goes on in the middle happens to humans not the planet. Of course these are my opinions and the doom-sayers are free to disagree.

Chicken Little

2418. ## What are the VFO frequencies of the AR-8000 and BC-3000 as function of received frequency?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-02-26 00:00:00 UTC

Hello Netfriends,

I want to use one of my scanners (BC-3000XLT and AR-8000) as weak,
general purpose signal generators, exploiting the normally unwanted
phenomena of VFO radiation (both direct and leakage to antenna).
Due to the complex conversion schemes of these radios (up/down
conversion) I'm completely at loss to try to find this out by myself,
as the VFO frequency is no longer +/- IF from the received frequency.
Can someone help me out and provide me with this info?
In addition, does anyone have another idea for a wide range frequency
synthisizer such as described above?
Thank's in advance for any help offered.

Thanks and best regards,
T-man

Note: when Replying, please email me directly in addition
to posting here, so I don't miss any responses. Don't forget to
remove the "97" from my email address inserted as an anti-spam
counter measure...:-)

thought.
>

>Work on your inner anger somewhere else, would you please? Your
>anti-Clint rantings are in no way in the true spirit of what Amateur
Radio is
>supposed to be all about.

Oh and I suppose that accusing other amateurs of dishonesty is in the
"true spriit" of Amateur radio.

> In the mean time, I will continue to support those
>firms that treat their public well. And RT Systems treats their valid
customer
>base with respect and excellent products.

Tell me Clint what is a "valid customer" I have 3 different versions of
their product am I valid or not. I have no issue with RT Systems just
you and you stupid chamber of commerce raving. If I were RT Systems I
would tell you to shut up since you try so hard to sound like you
represent them and then insult and accuse their other customers. I must
respectfully disagree with your contention that they treat their
customers well. If you tell the truth about your "free upgrades" and
"free customer service phone numbers" and stop treating people who ask
a legitimate question like criminals then I will lay off of you but
until then ....

Hello. I have a MFJ-862 144/220/440 cross-needle 300w SWR/Watt meter for sale. New cost is $50 from MFJ. My price is $30. It's in excellent working and excellent cosmetic condition and has very little use on it. Let me know if interested. Here's all of the information on it:

-30w/300w Switch
-Works On 144/220/440 Ham Bands
-Measures SWR And Wattage
-Add A 12v DC Power Cord To Light The Meter
-Includes Original Manual, Box, And Original Packaging

Will trade for a 20 amp or higher DC power supply, any Kenwood HF accessories, or an All Mode (AM/FM/SSB/CW/RTTY) base frequency counter. Or if you have anything else let me know. Thanks for reading.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two | rubber belts. The Projector Recorder Belt Company makes | replacement belts which work fine, though they may not be | the original equipment: |

1. PRB SCA8.6 (218 mm) |
2. PRB SCQ 2.5 (64 mm) |

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. If you wish to
purchase a new receiver with "Plectron-like" signaling
capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Not only did I have the 41T, a good amount of hams I know have them. You can find them at hamfests and on sale for $79. I used the 41 because we have 440 machines linked to 2 meter machines. If you are in a area that has good coverage, and you want a decent HT to throw in your pocket, I would go with it. There are several other HTs that size, but a little more pricey.
